BRDL

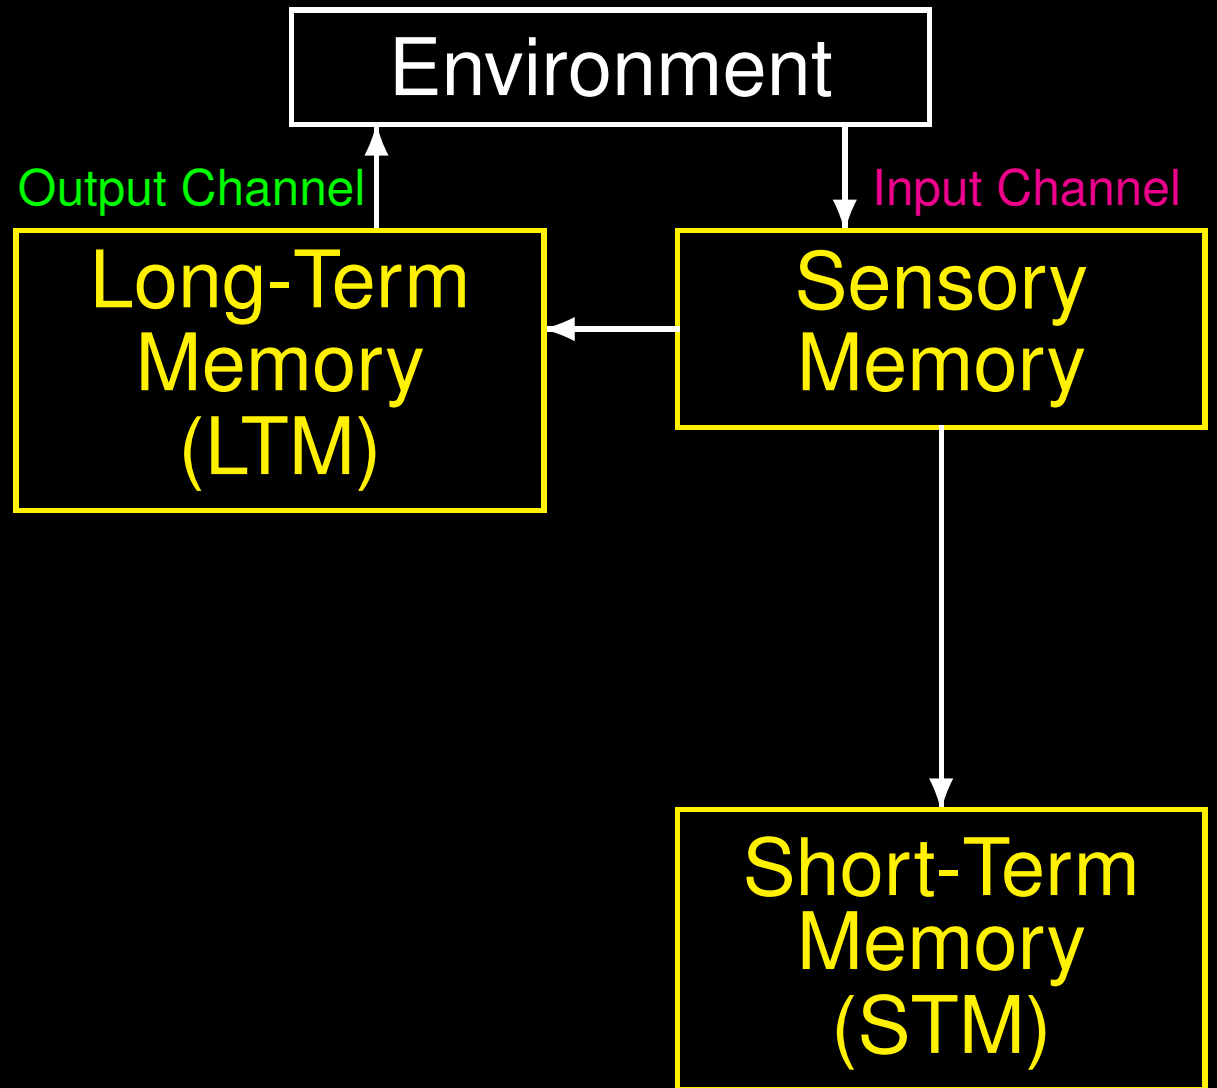

Behaviour and Reasoning Description Language

- knowledge representation
- knowledge retrieval
- reasoning
- human behaviour
- problem solving

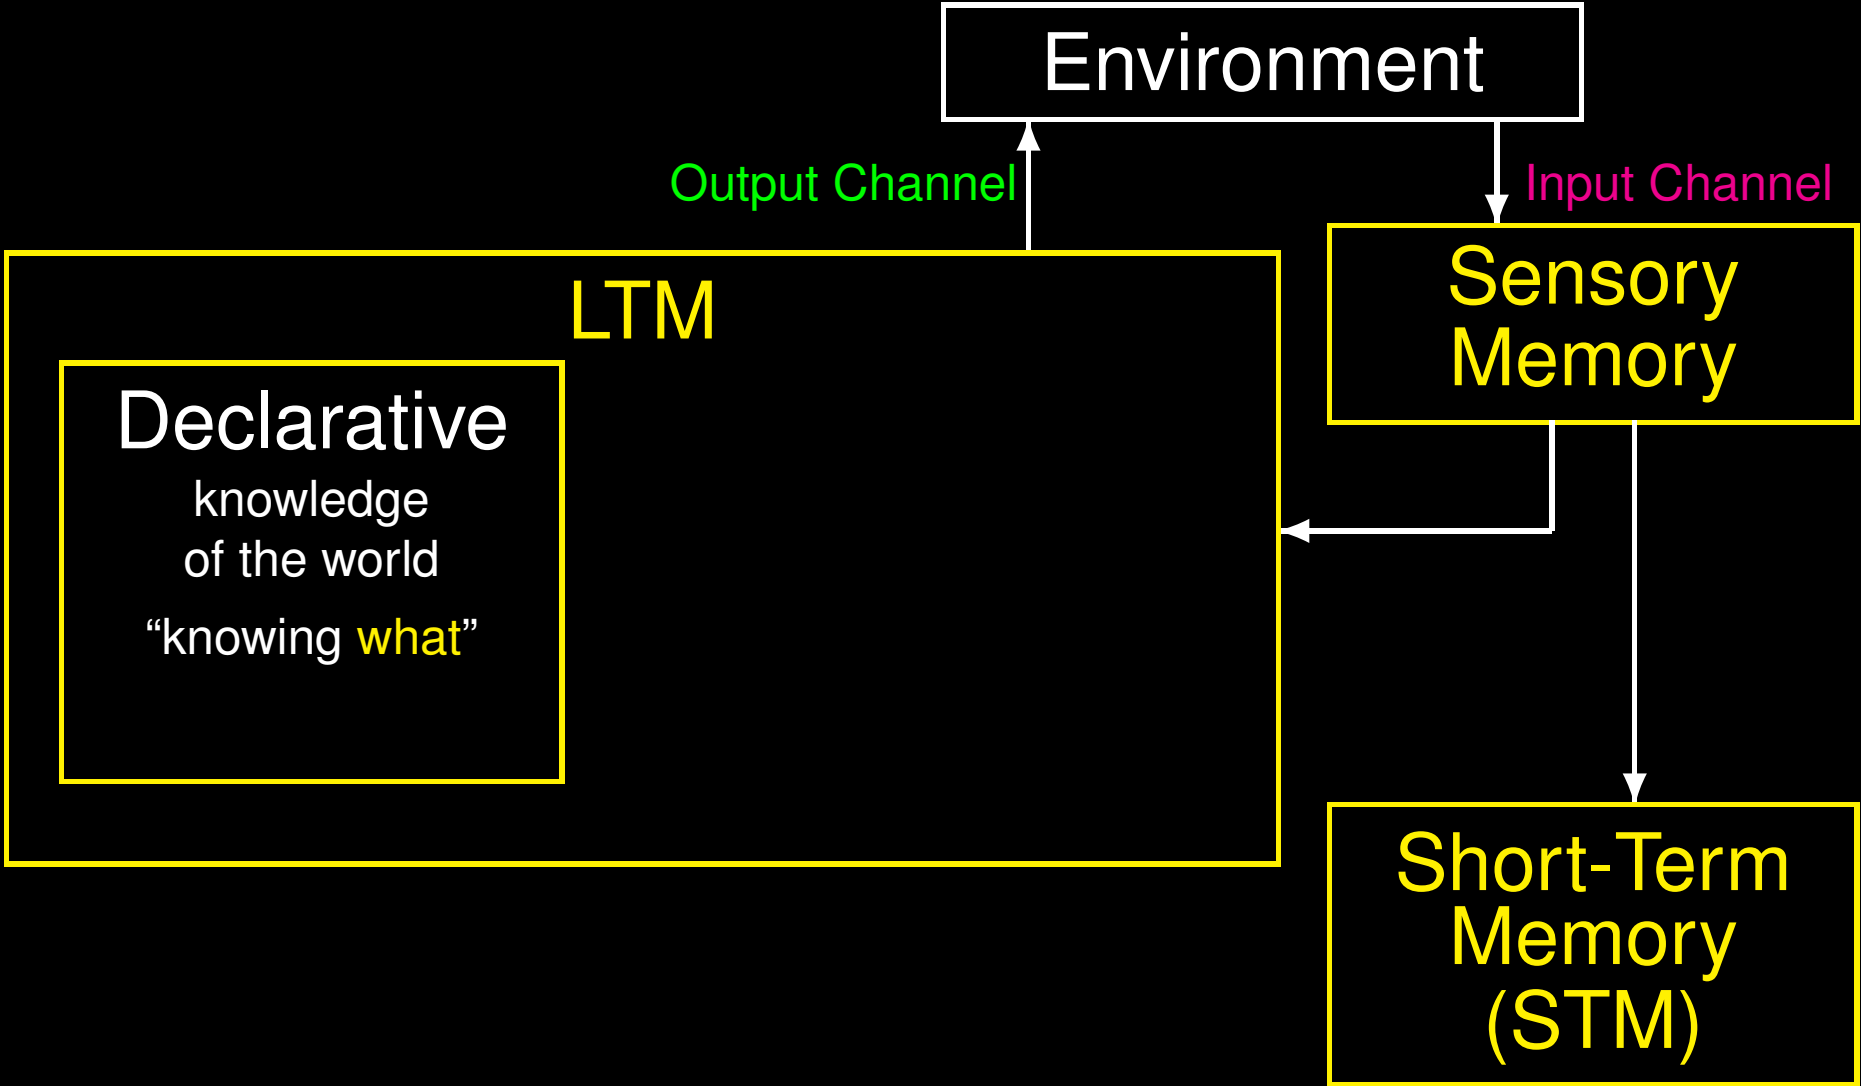

Human Memory

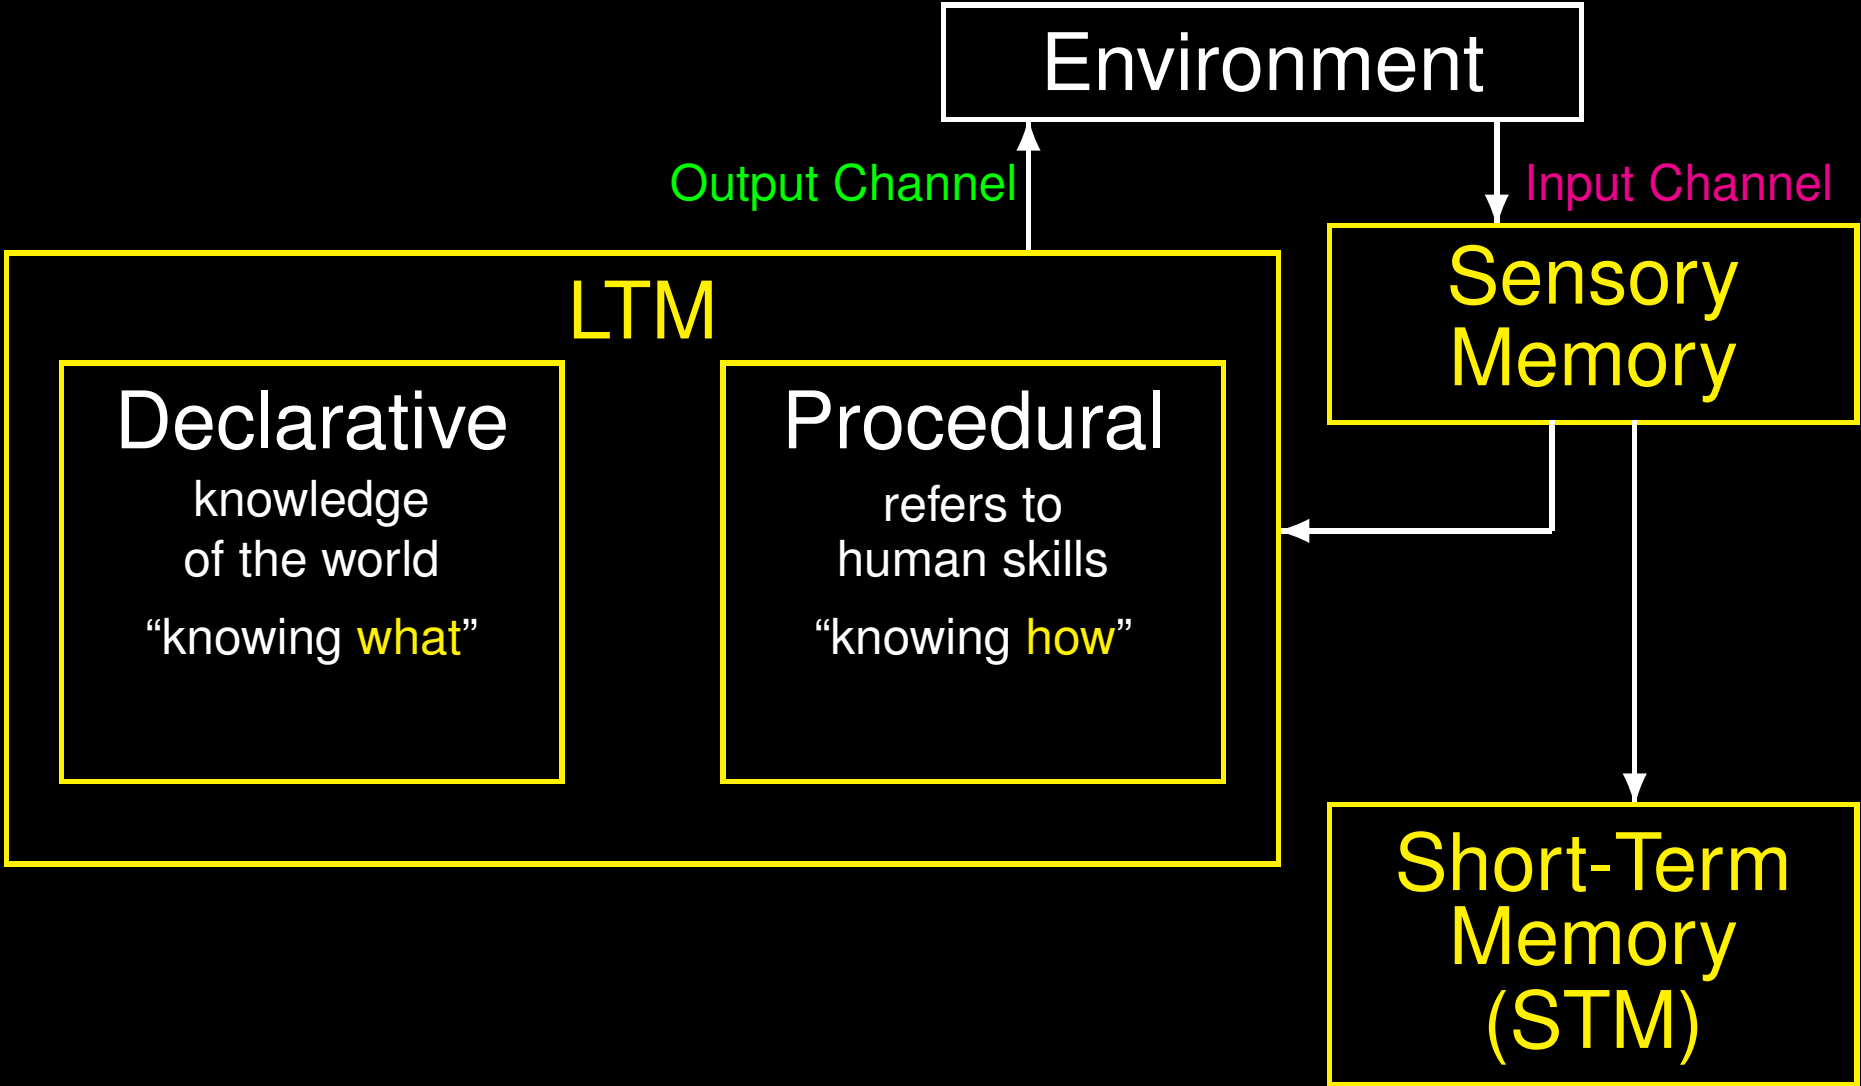

Human Memory

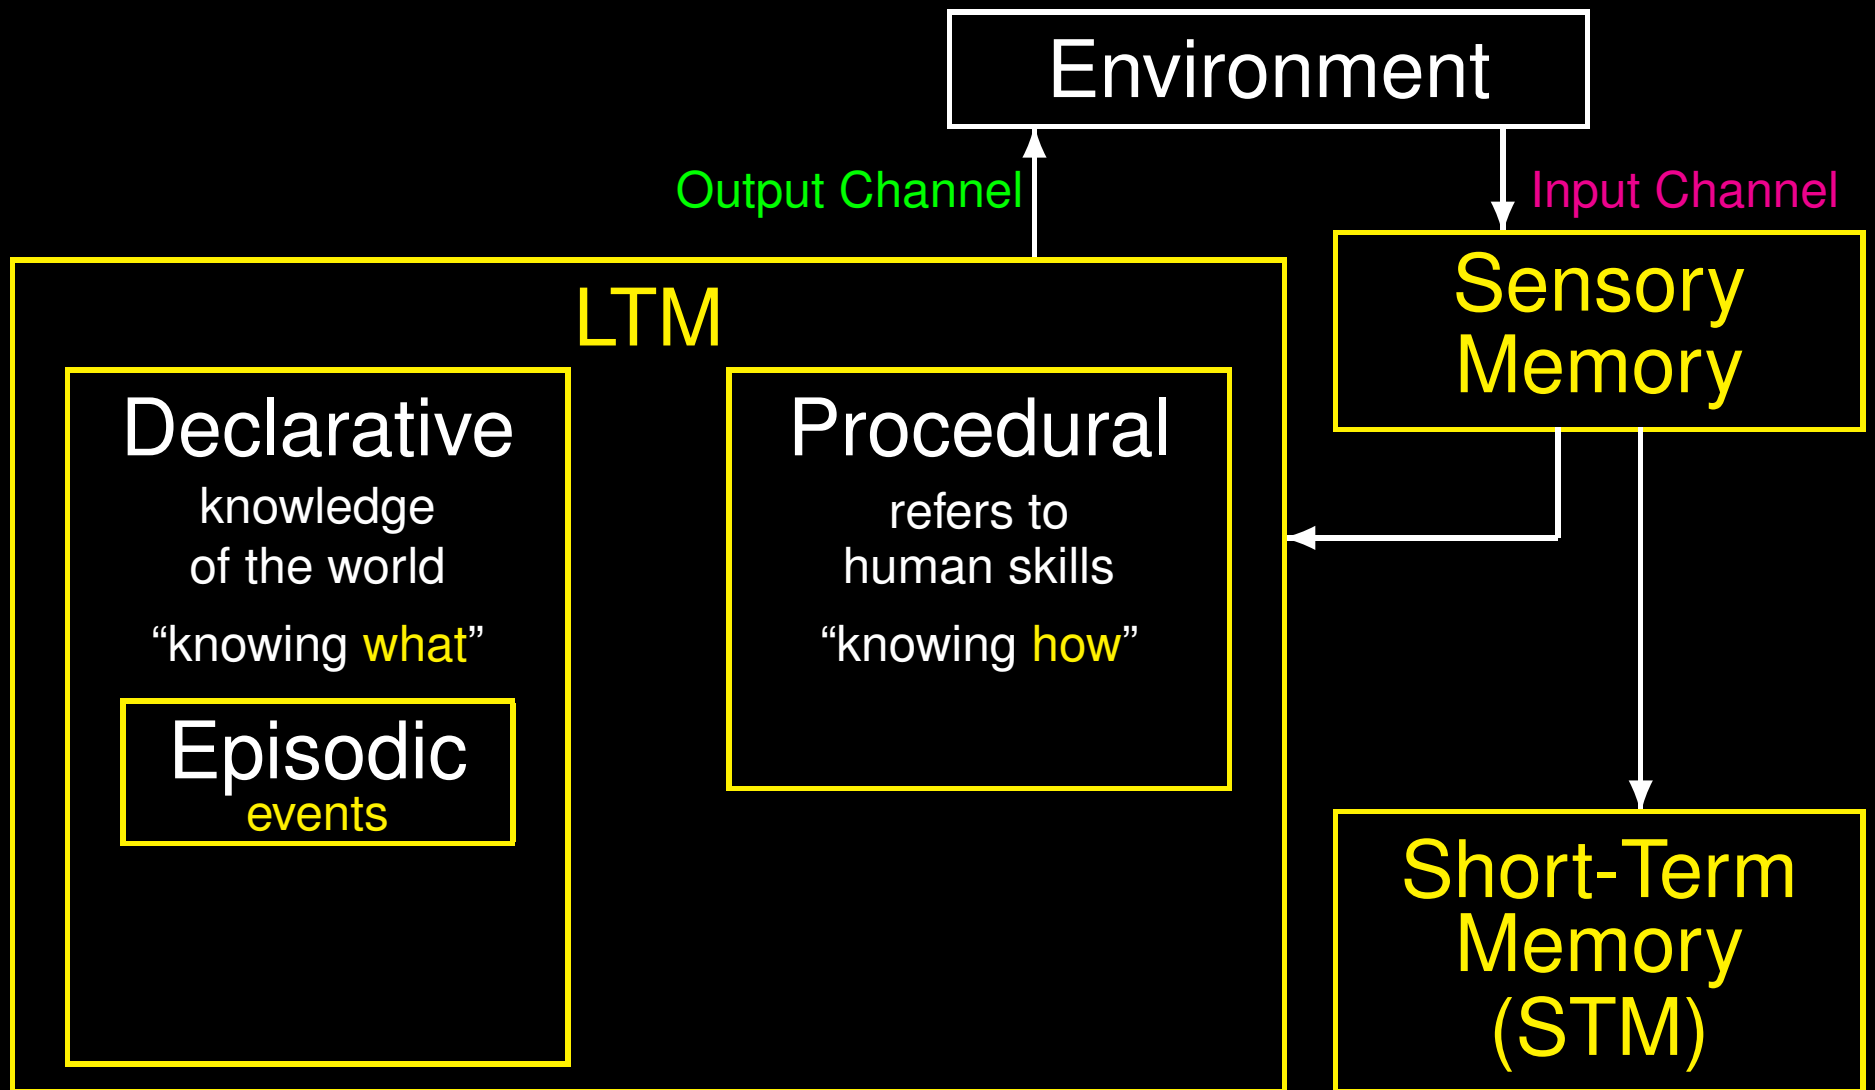

Long-Term Memory (LTM)

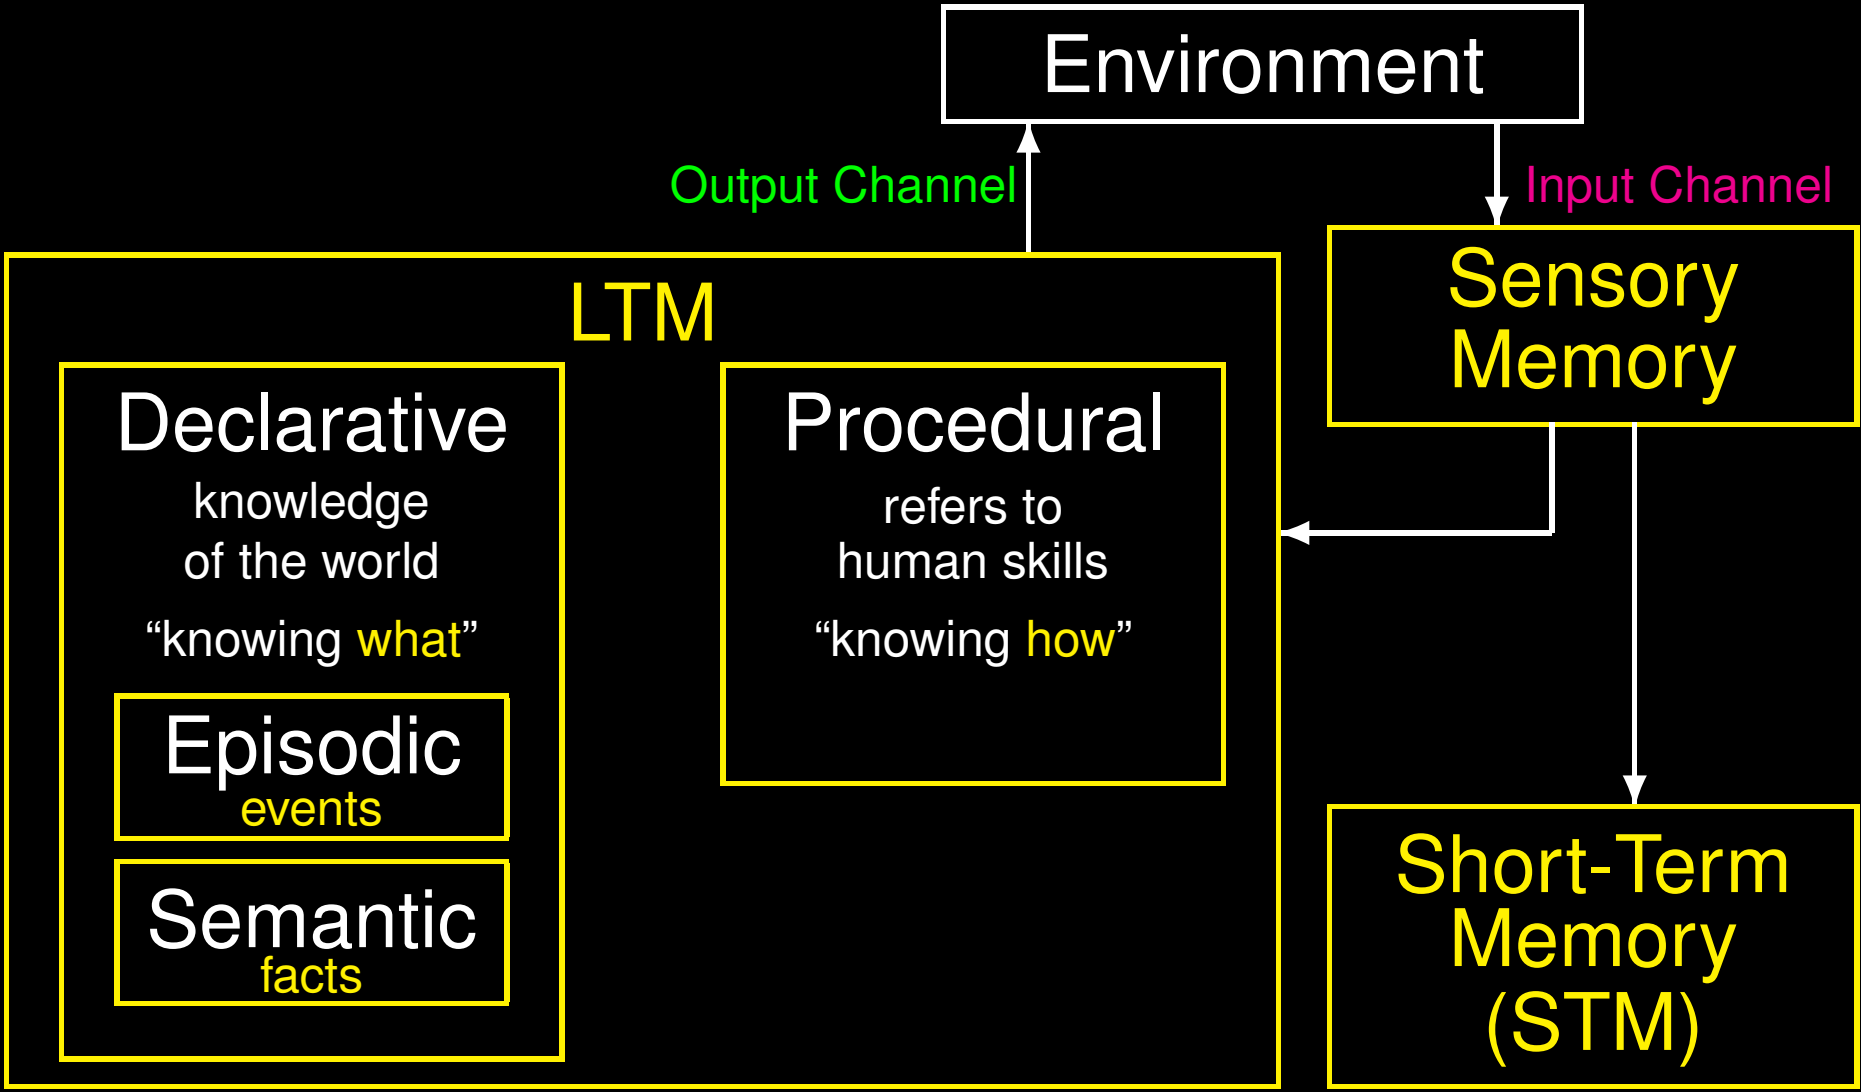

Long-Term Memory (LTM)

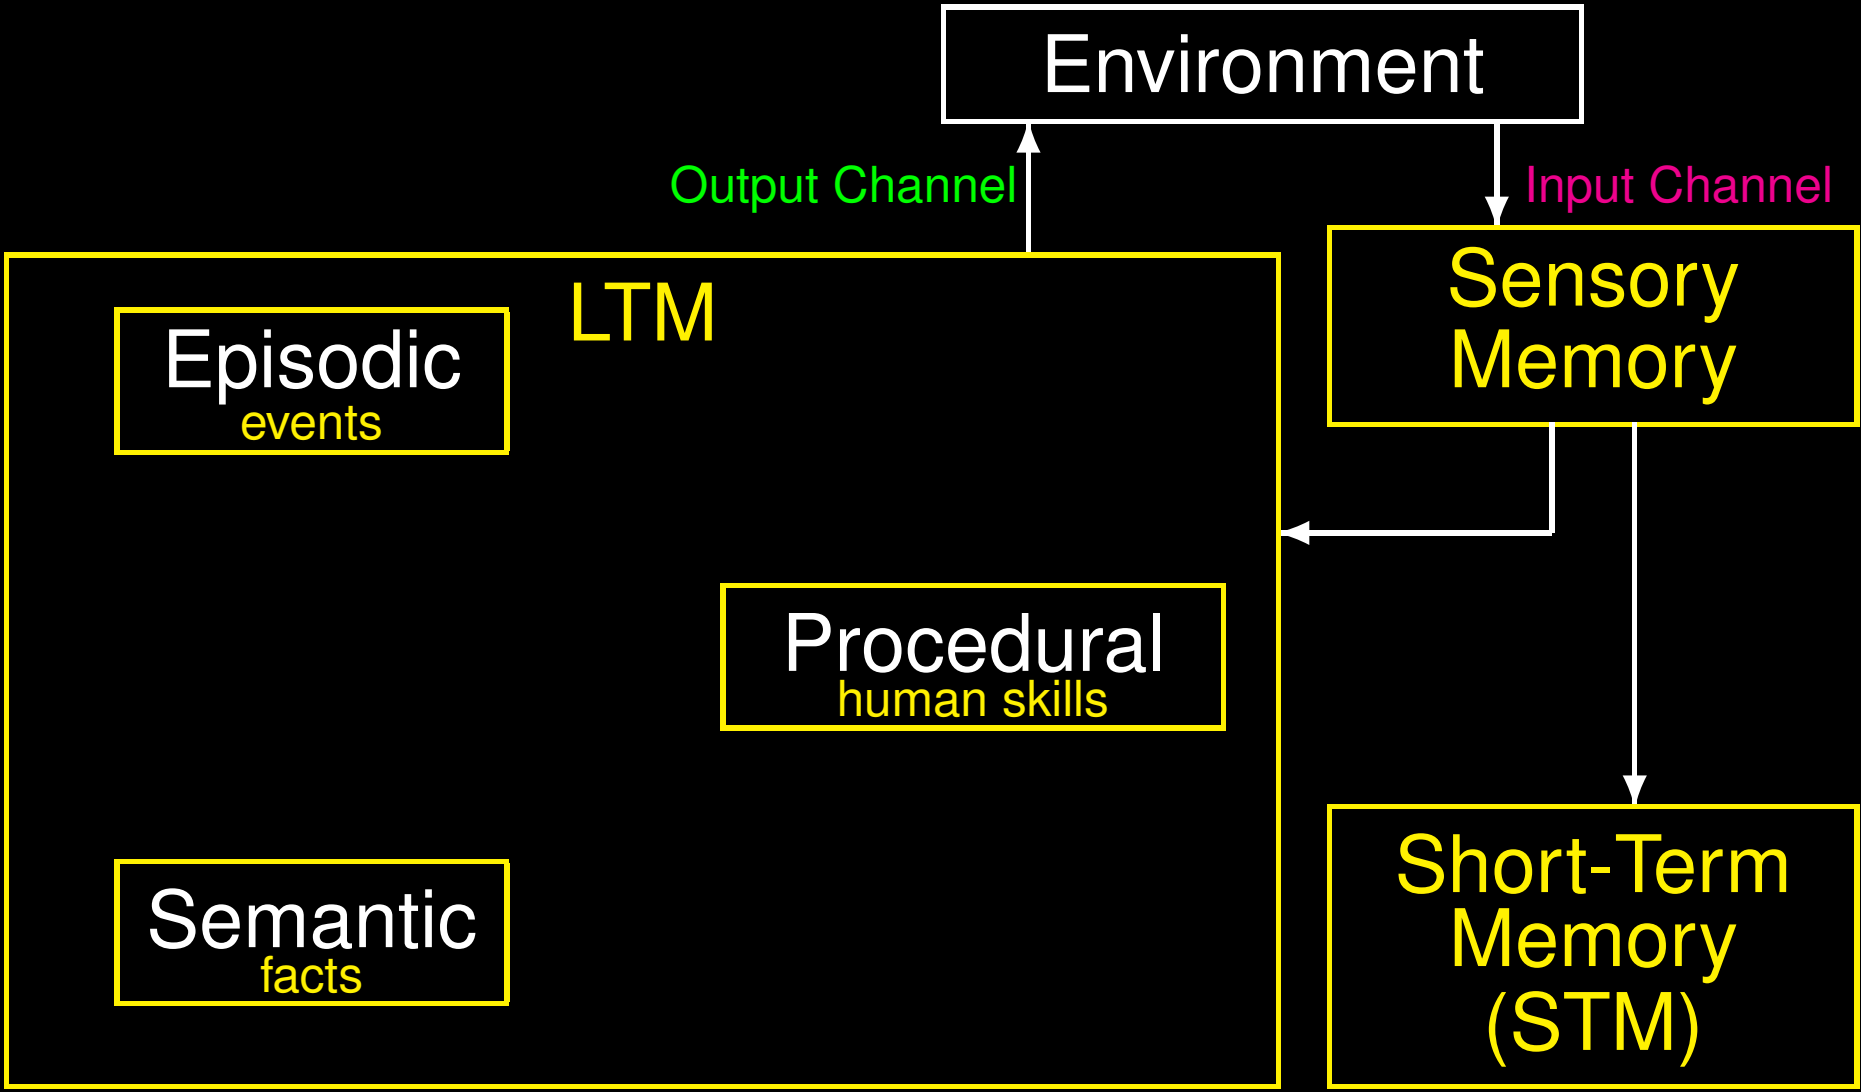

LTM Components

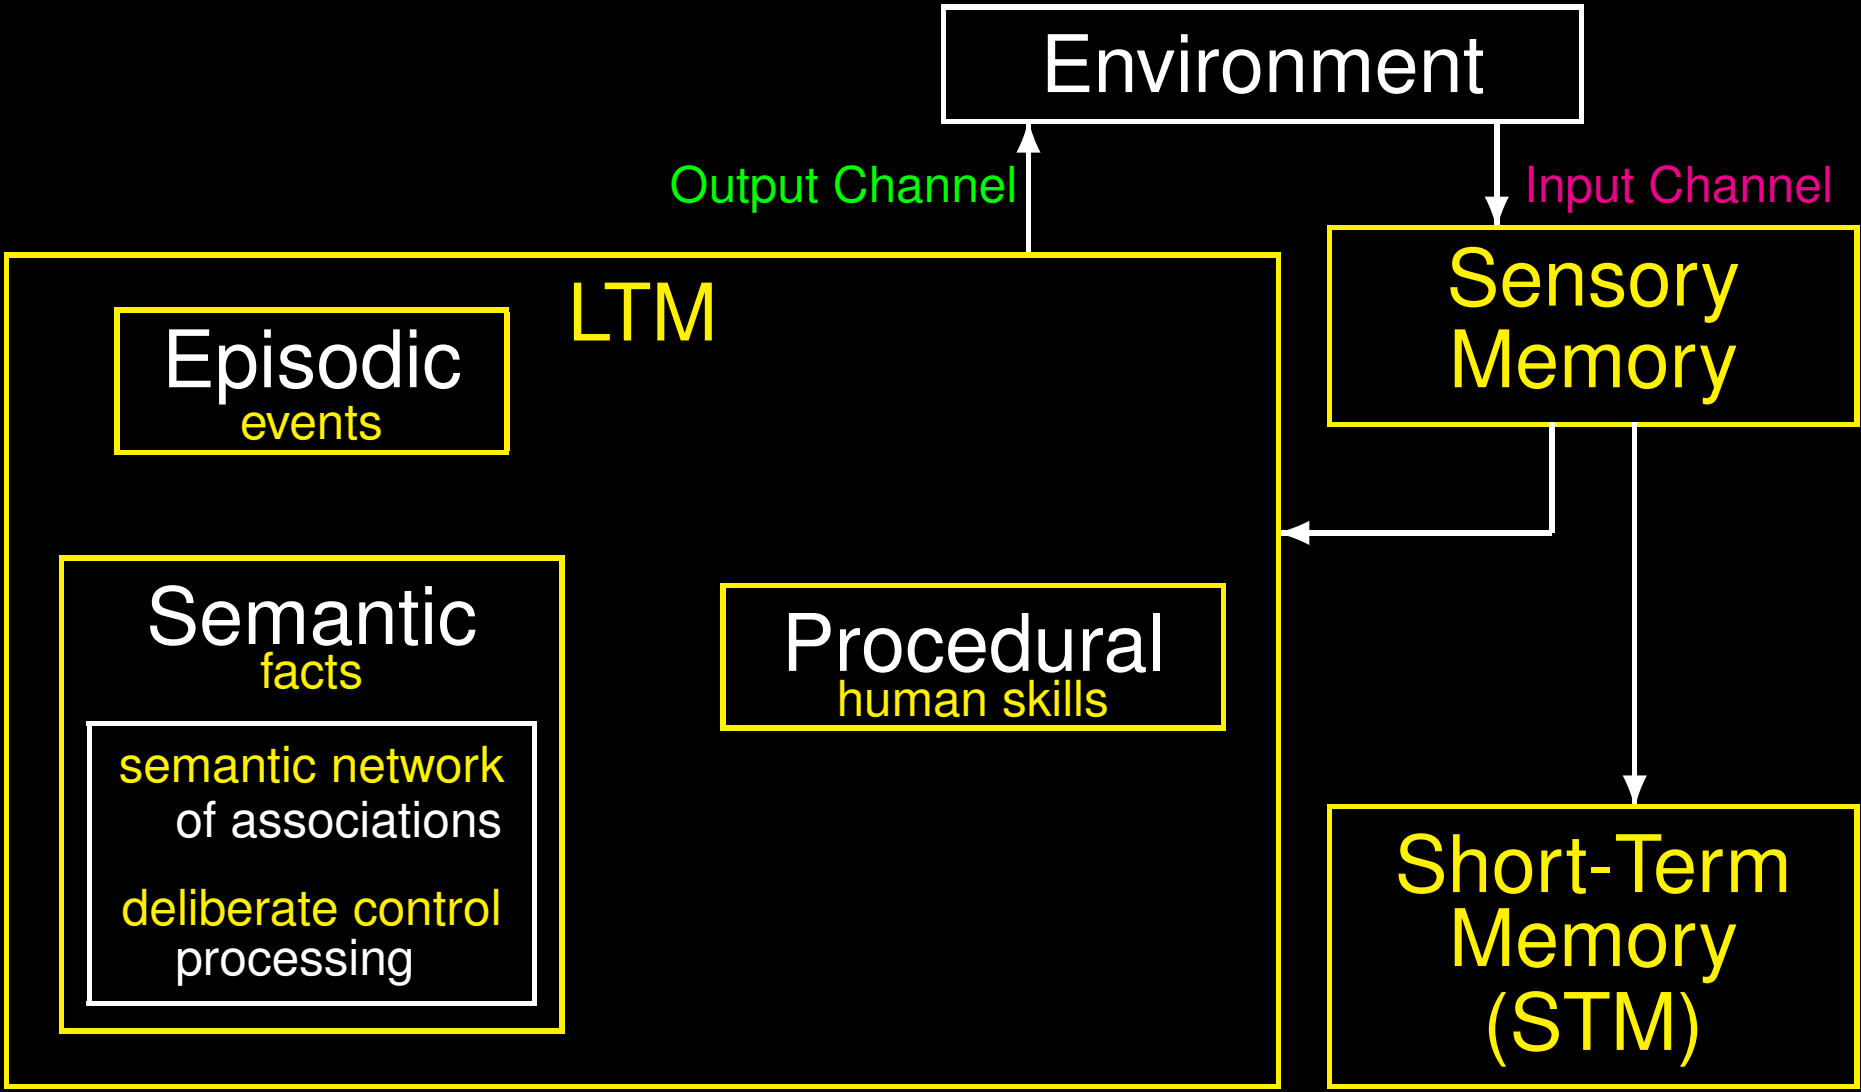

LTM Components

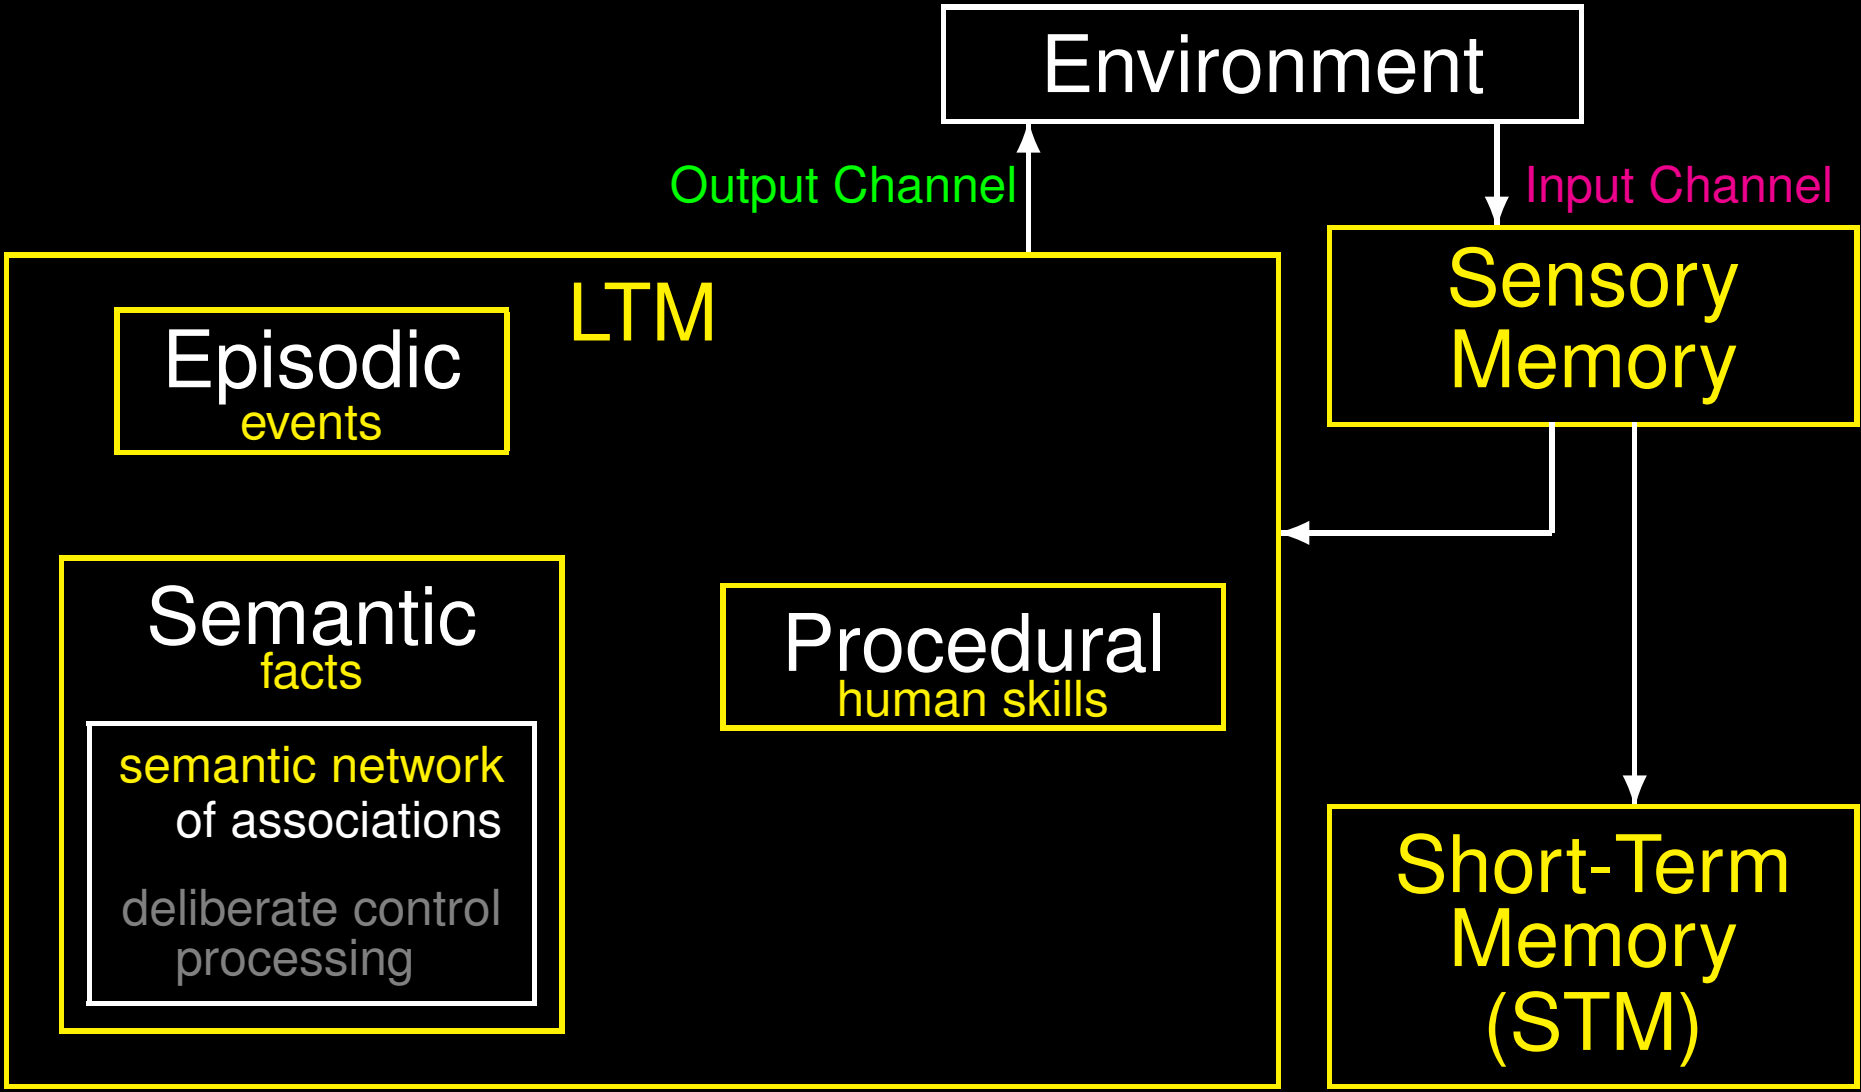

Semantic Memory

Semantic Memory

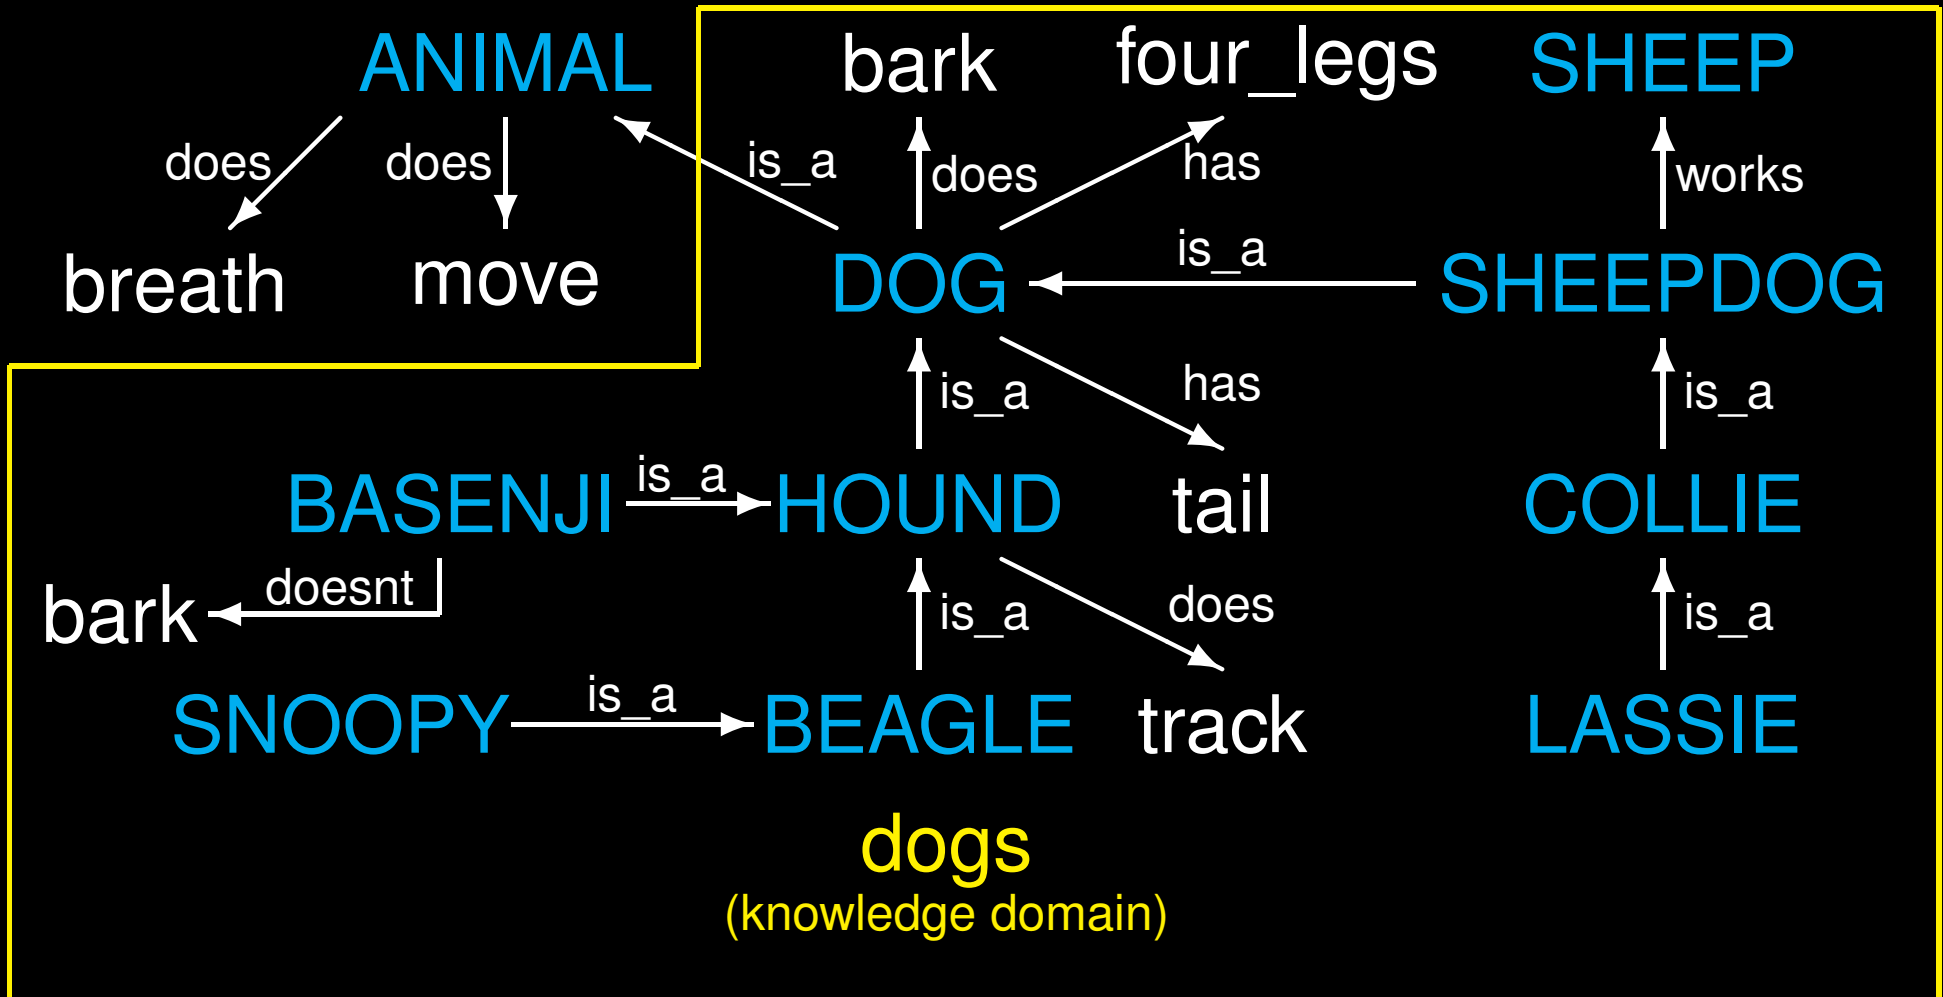

Semantic Memory

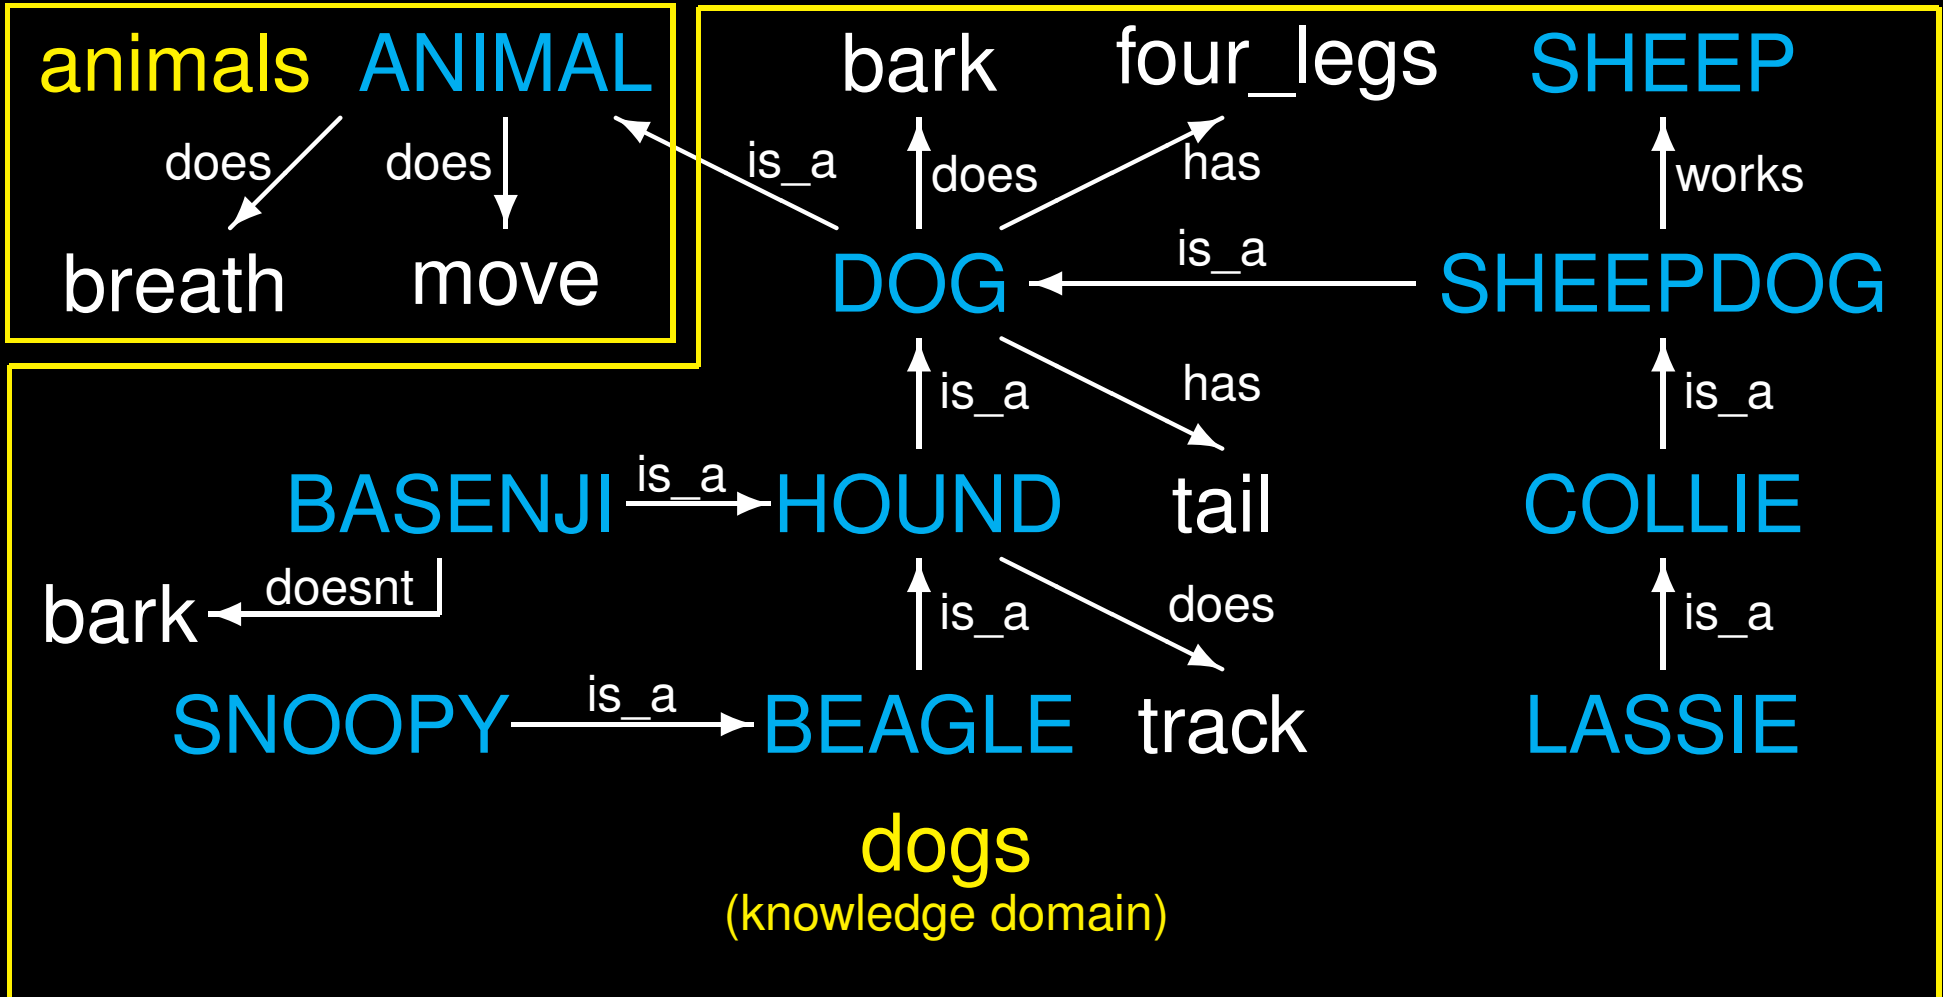

Example of Semantic Network

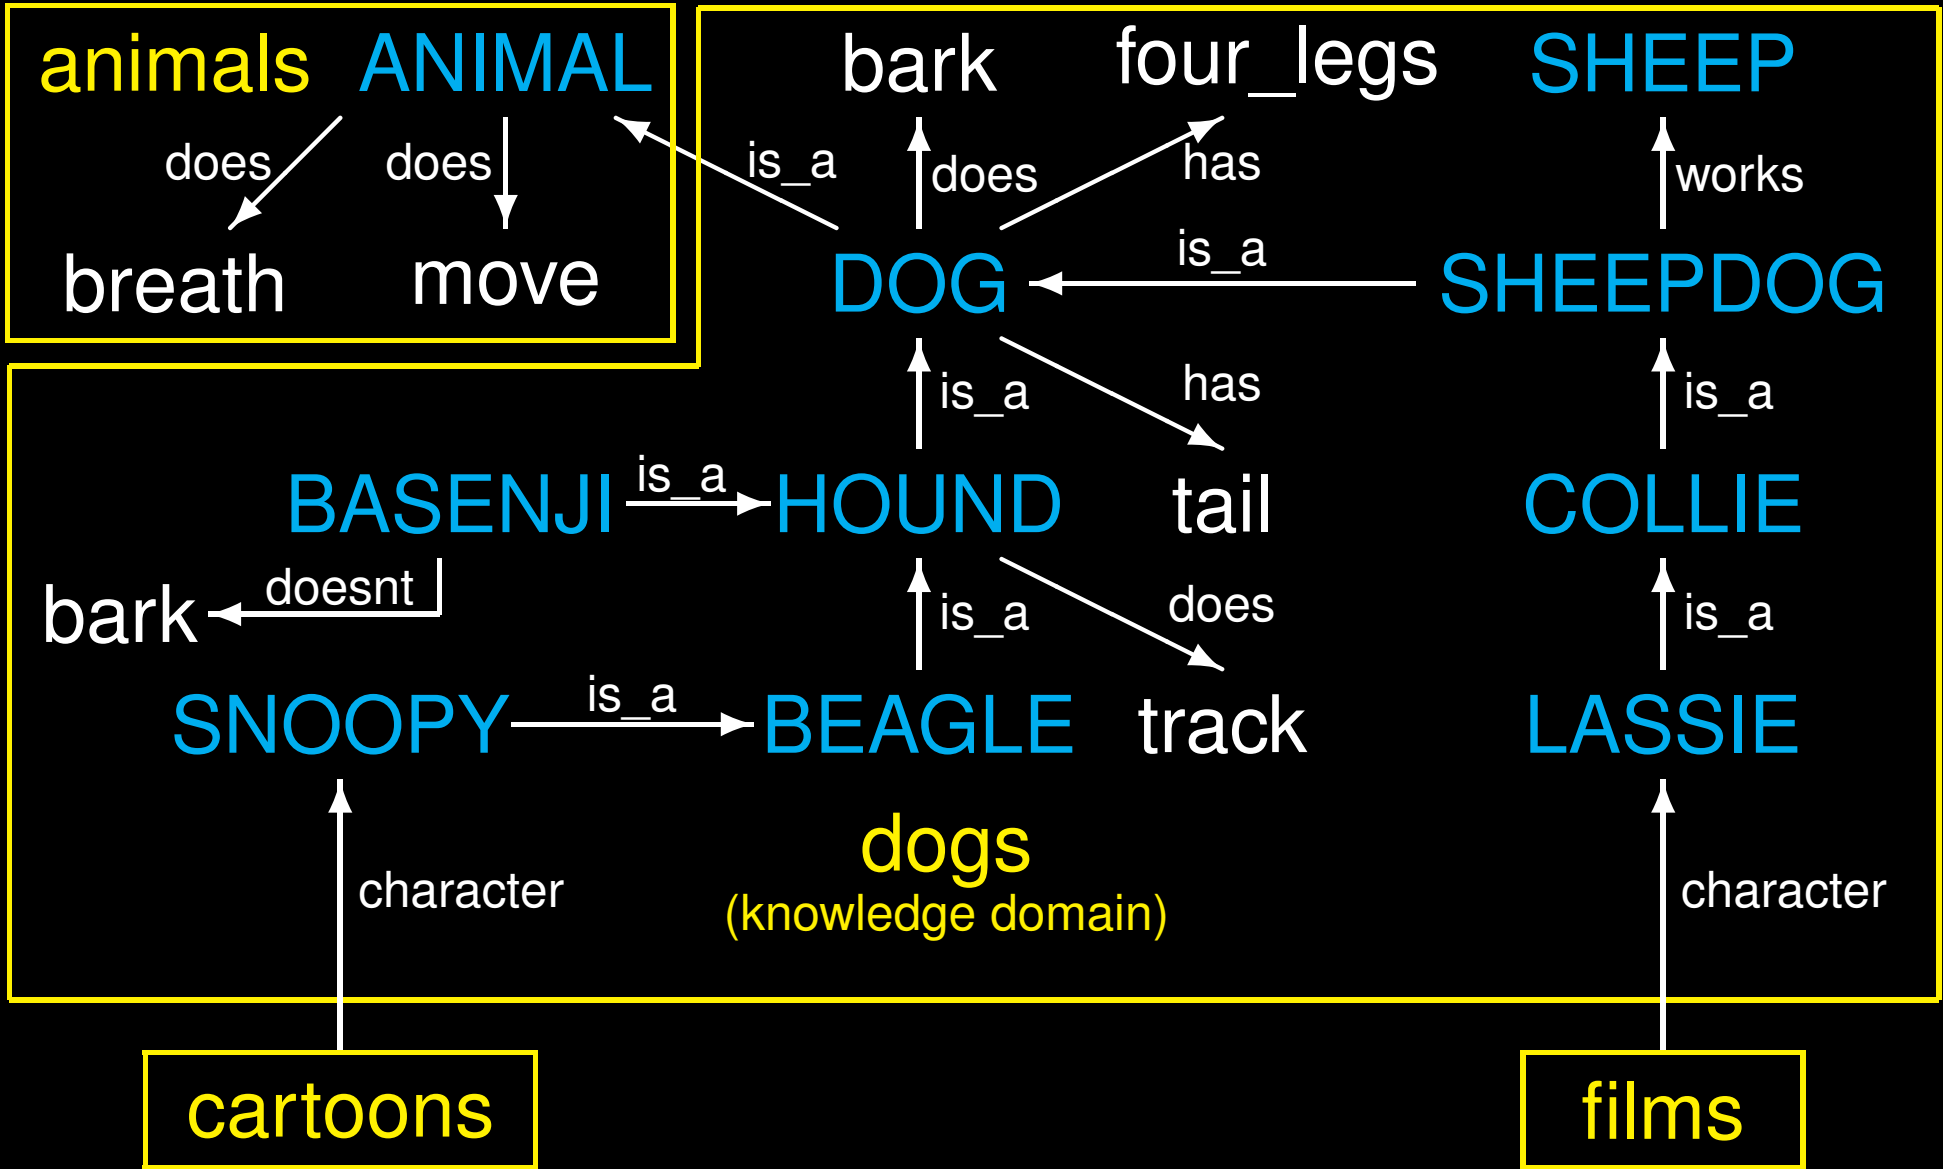

Example of Knowledge Domain

Example of Knowledge Domain

Example of Knowledge Domain

Knowledge Representation

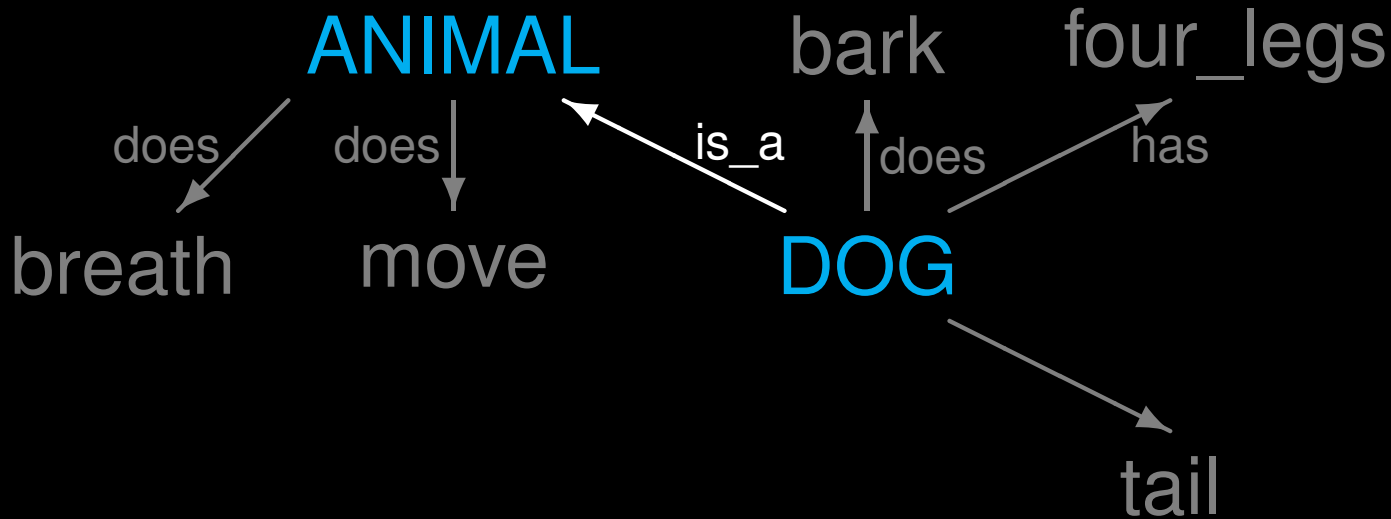

animals : *animal* | $\xRightarrow{d_1}$ | *does(breath)*

Knowledge Representation

animals : *animal* | $\xRightarrow{d_1}$ | *does(breath)*

dogs : *dog* | $\xRightarrow{d_2}$ | *is_a(animal)*

Knowledge Representation

animals : *animal* | $\xRightarrow{d_1}$ | *does(breath)*

dogs : *dog* | $\xRightarrow{d_2}$ | *is_a(animal)*

dogs : *dog* | $\xRightarrow{d_3}$ | *does(bark)*

dogs : *basenji* | $\xRightarrow{d_4}$ | *doesnt(bark)*

Knowledge Representation

animals : *animal* | $\xRightarrow{d_1}$ | *does(breath)*

dogs : *dog* | $\xRightarrow{d_2}$ | *is_a(animal)*

dogs : *dog* | $\xRightarrow{d_3}$ | *does(bark)*

dogs : *basenji* | $\xRightarrow{d_4}$ | *doesnt(bark)*

dogs : *sheepdog* | $\xRightarrow{d_5}$ | *is_a(dog)*

dogs : *sheepdog* | $\xRightarrow{d_6}$ | *works(sheep)*

dogs : *collie* | $\xRightarrow{d_7}$ | *is_a(sheepdog)*

dogs : *lassie* | $\xRightarrow{d_8}$ | *is_a(collie)*

Knowledge Representation

animals : *animal* | $\xRightarrow{d_1}$ | *does(breath)*

dogs : *dog* | $\xRightarrow{d_2}$ | *is_a(animal)*

dogs : *dog* | $\xRightarrow{d_3}$ | *does(bark)*

dogs : *basenji* | $\xRightarrow{d_4}$ | *doesnt(bark)*

dogs : *sheepdog* | $\xRightarrow{d_5}$ | *is_a(dog)*

dogs : *sheepdog* | $\xRightarrow{d_6}$ | *works(sheep)*

dogs : *collie* | $\xRightarrow{d_7}$ | *is_a(sheepdog)*

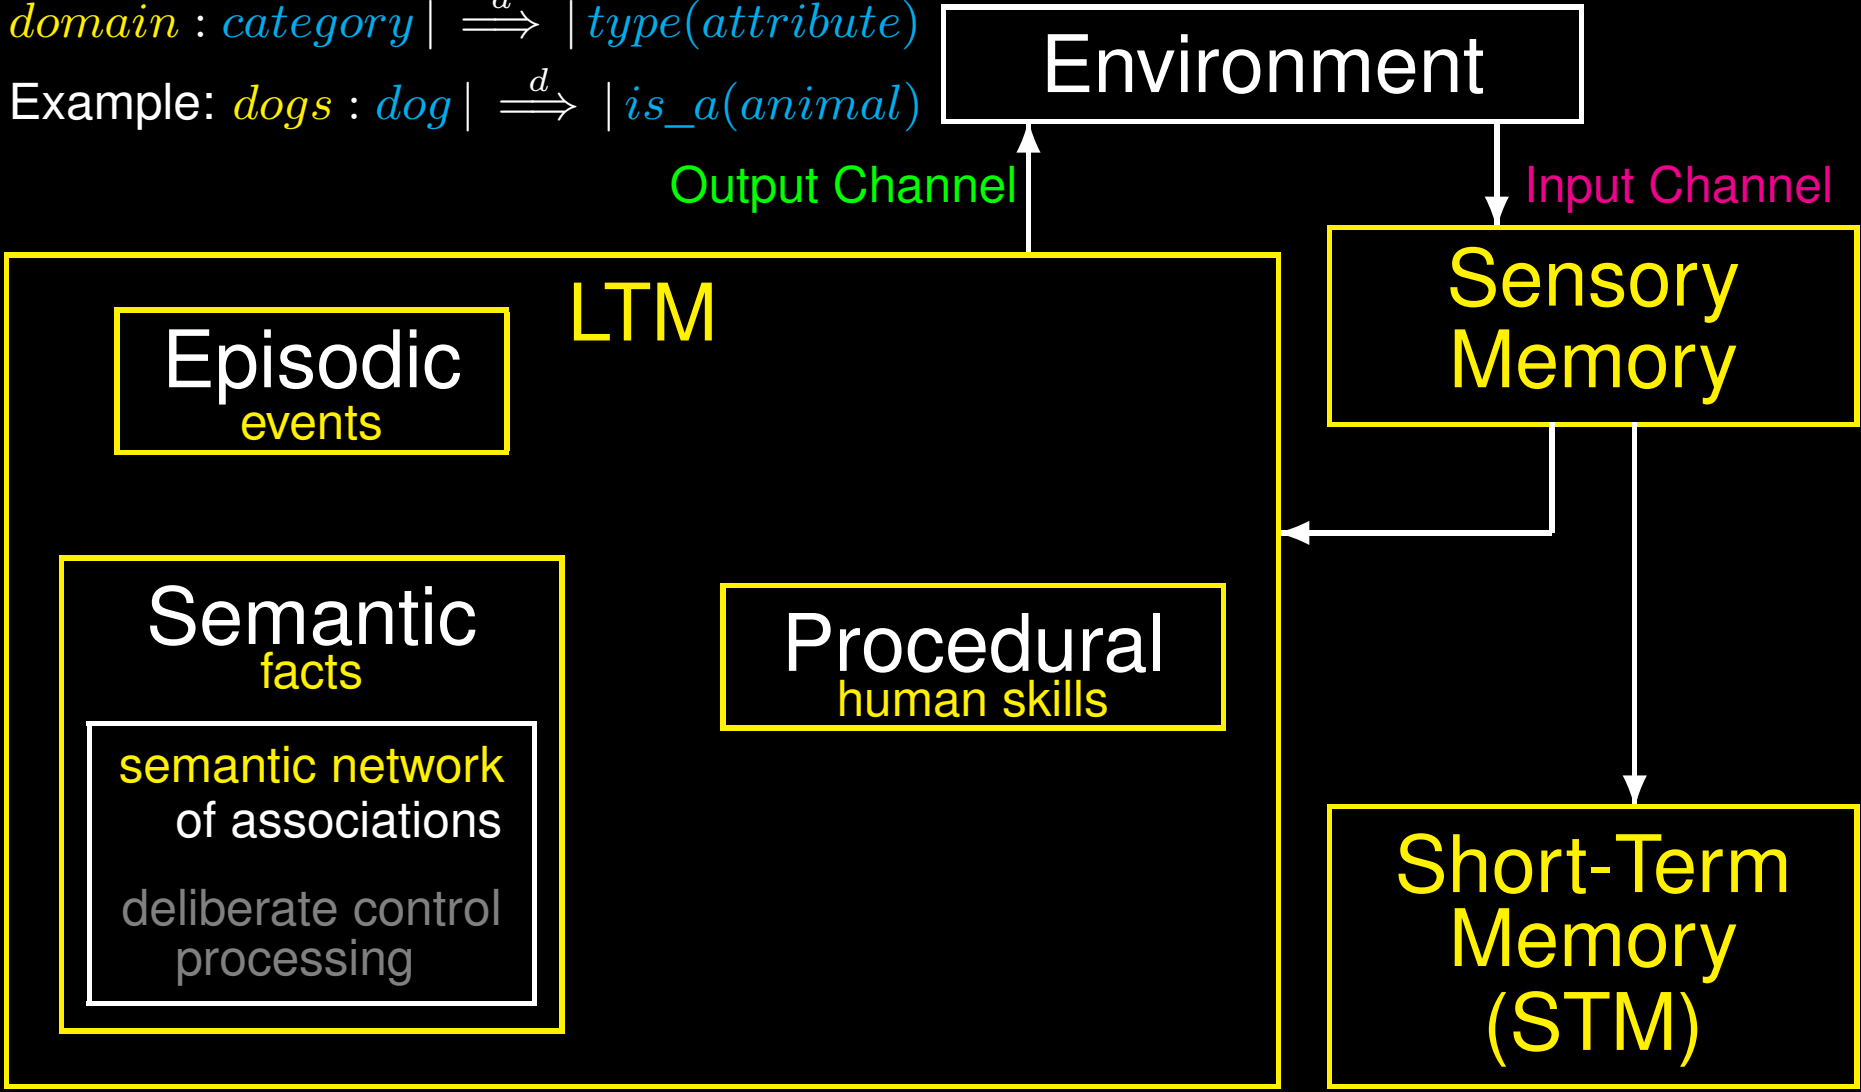

dogs : *lassie* | $\xRightarrow{d_8}$ | *is_a(collie)*

dogs : *hound* | $\xRightarrow{d_9}$ | *does(track)*

Semantic Network in BRDL

domain : *category* | \xRightarrow{d} | *type(attribute)*

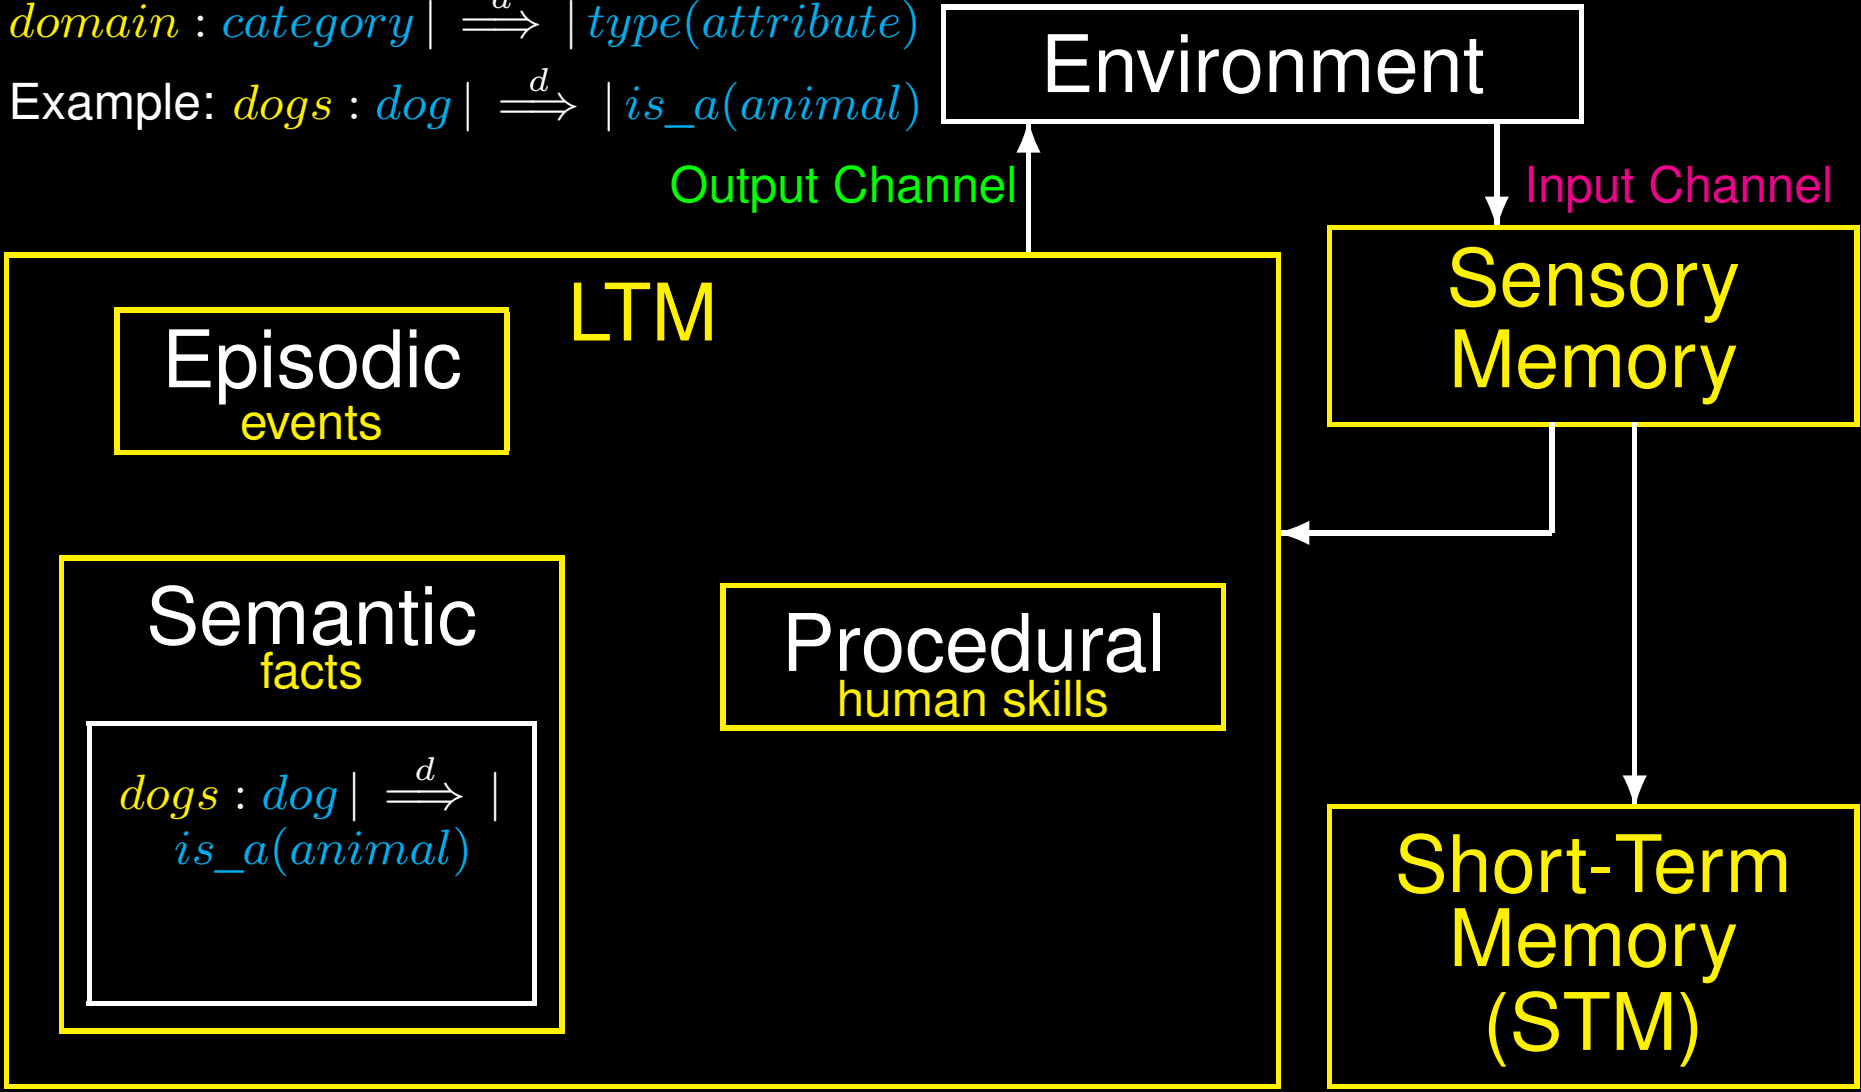

Example: *dogs* : *dog* | \xRightarrow{d} | *is_a(animal)*

Semantic Network in BRDL

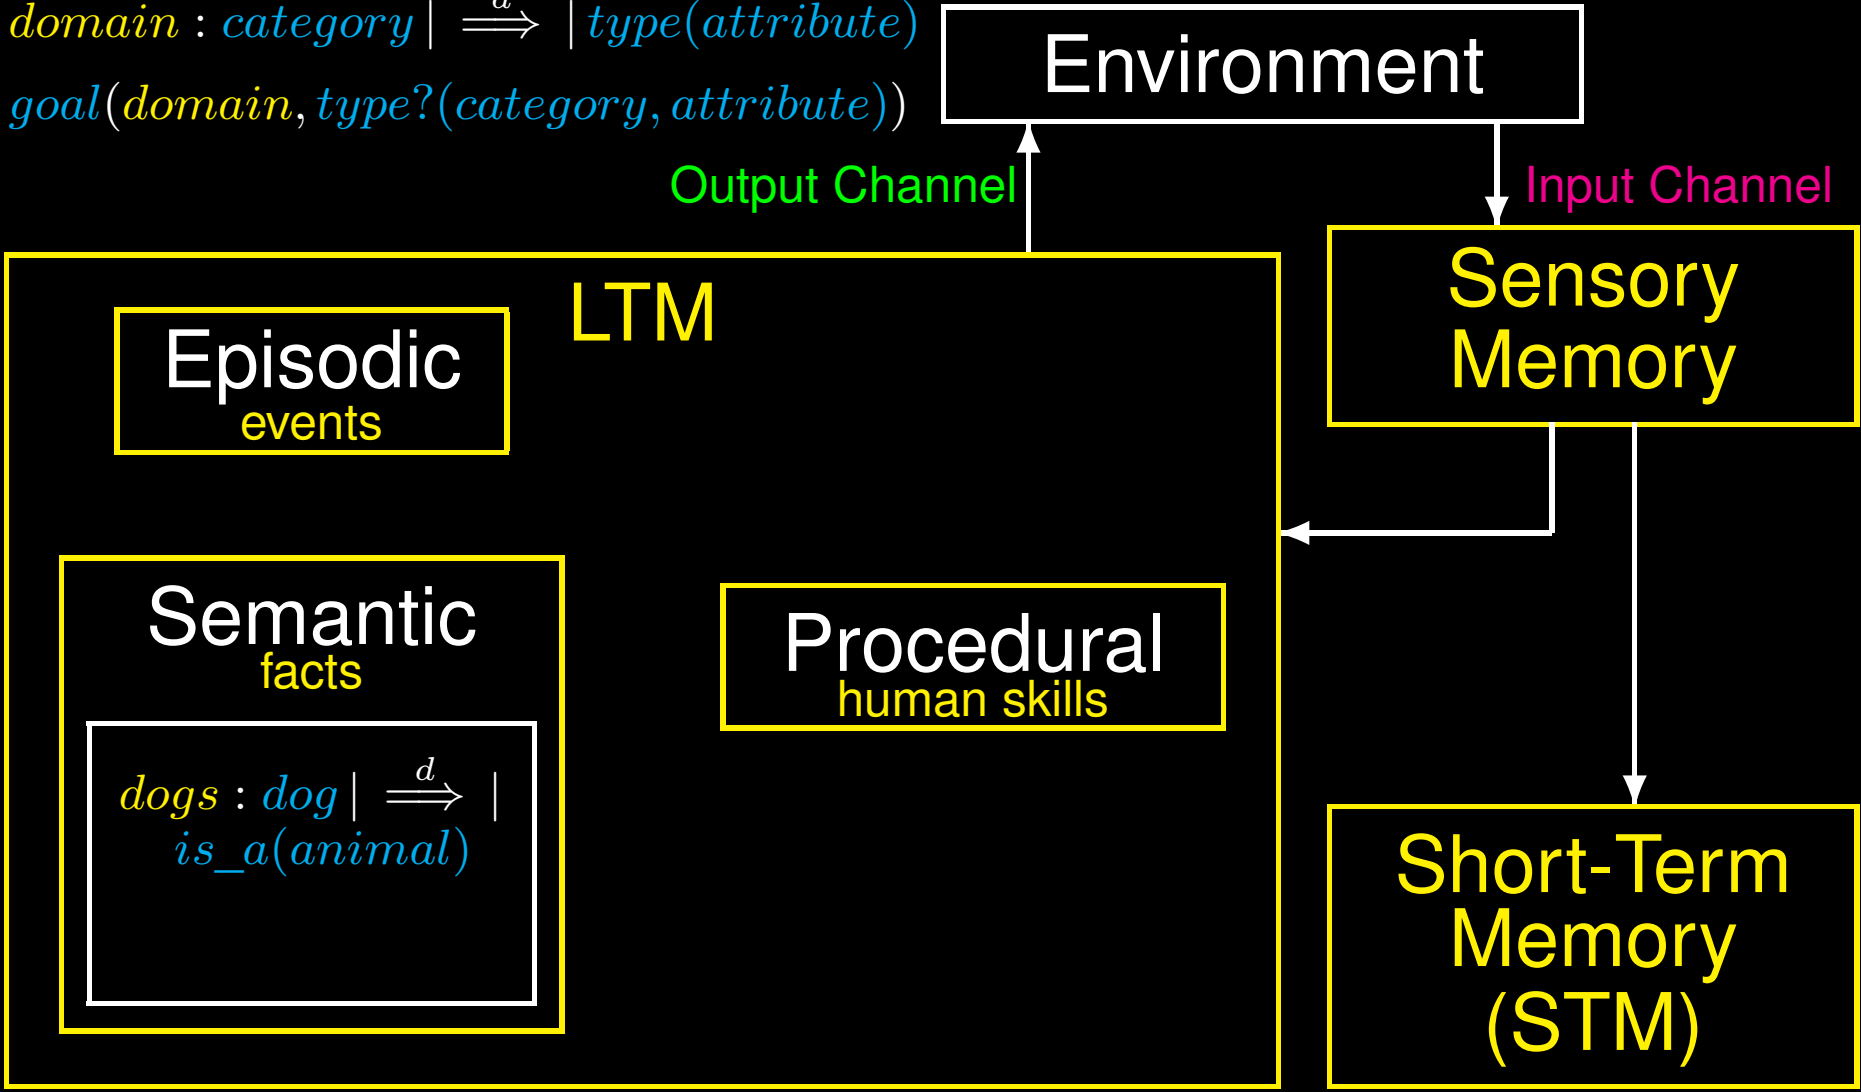

domain : *category* | \xRightarrow{d} | *type(attribute)*

Example: *dogs* : *dog* | \xRightarrow{d} | *is_a(animal)*

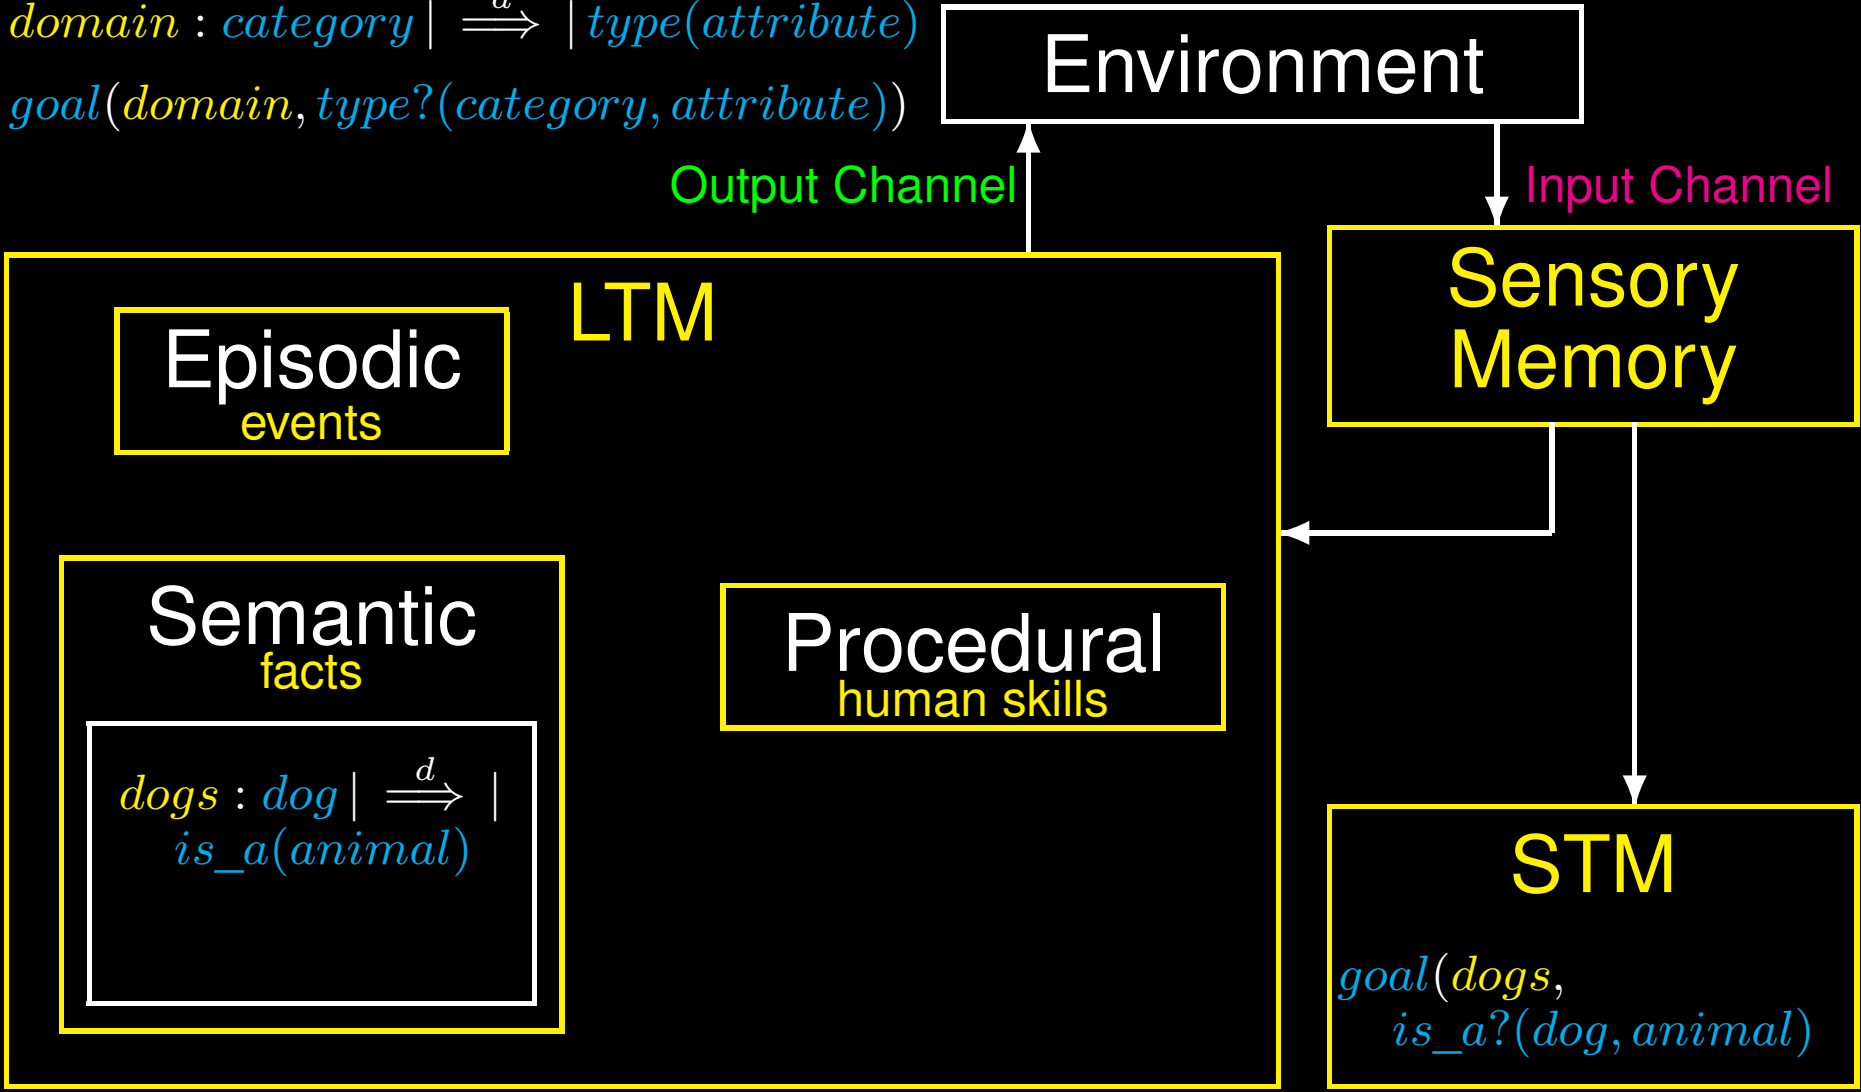

Knowledge Retrieval

$domain : category \mid \xRightarrow{d} \mid type(attribute)$
 $goal(domain, type?(category, attribute))$

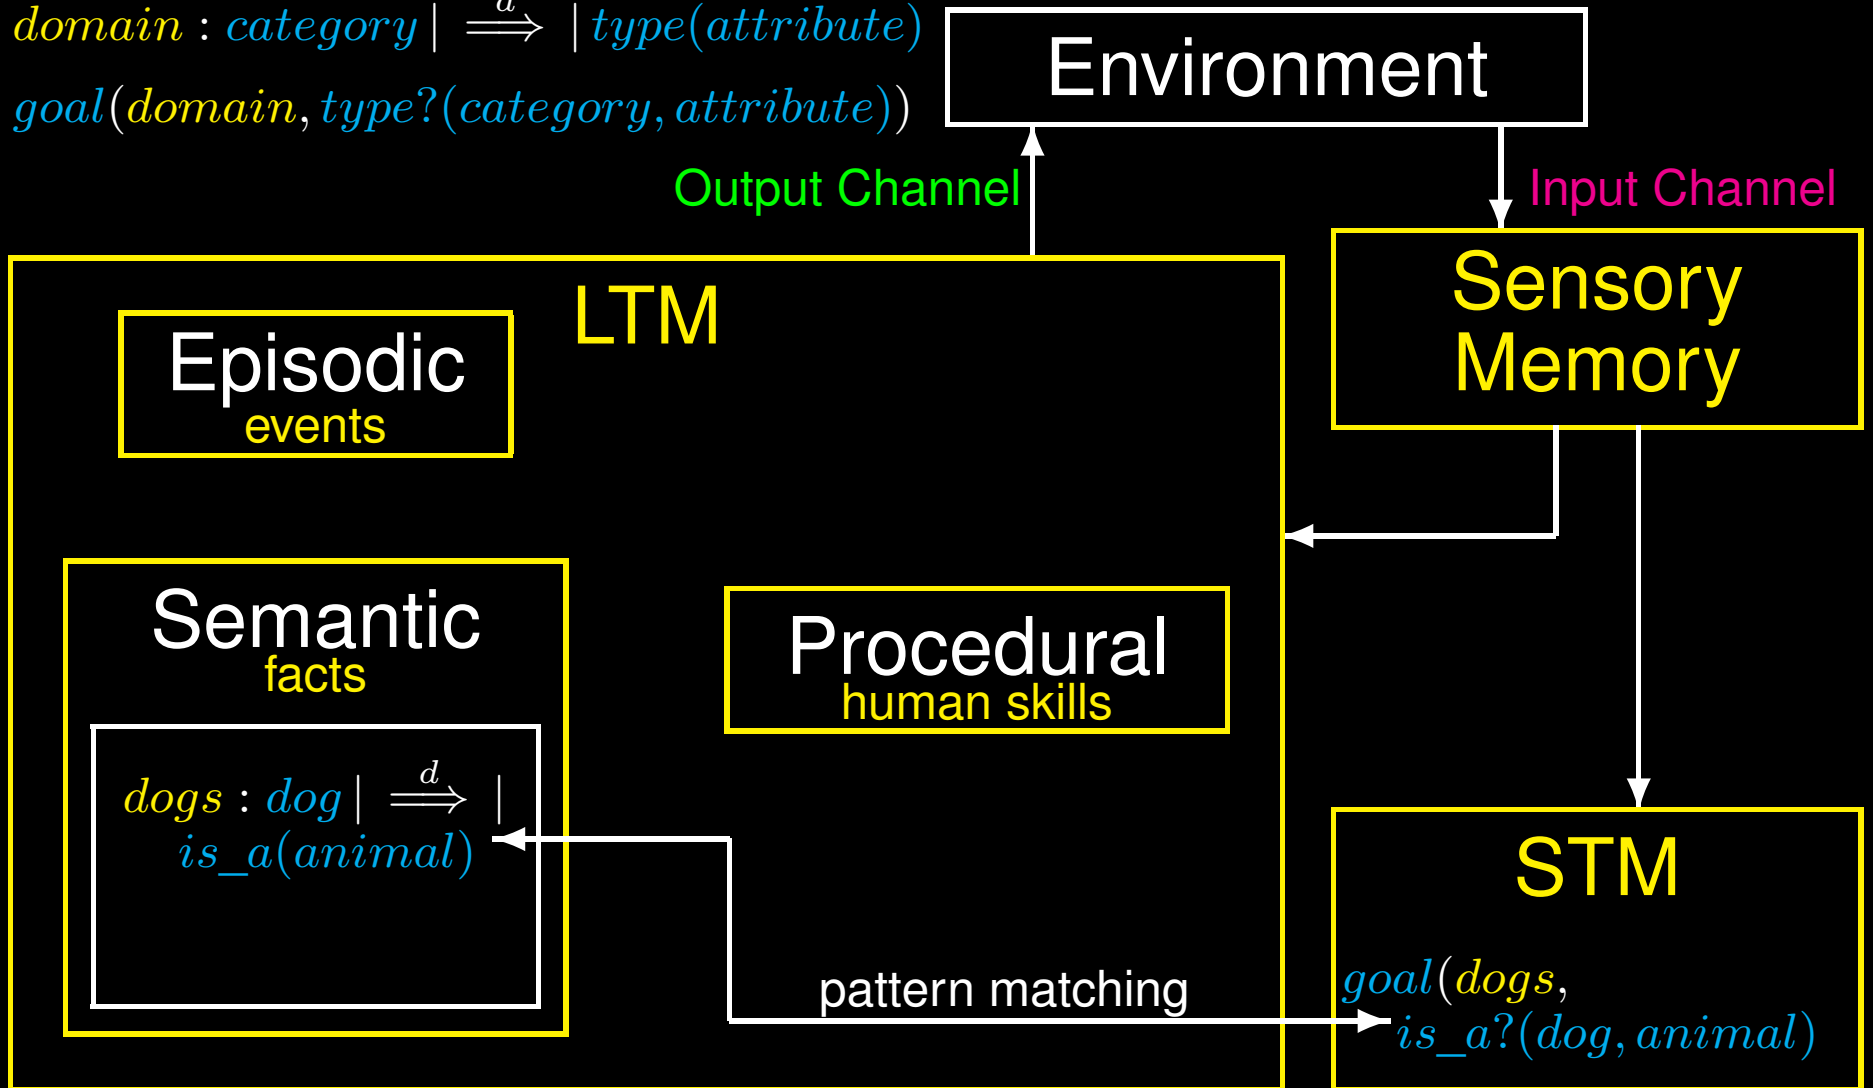

Knowledge Retrieval

$domain : category \mid \xRightarrow{d} \mid type(attribute)$
 $goal(domain, type?(category, attribute))$

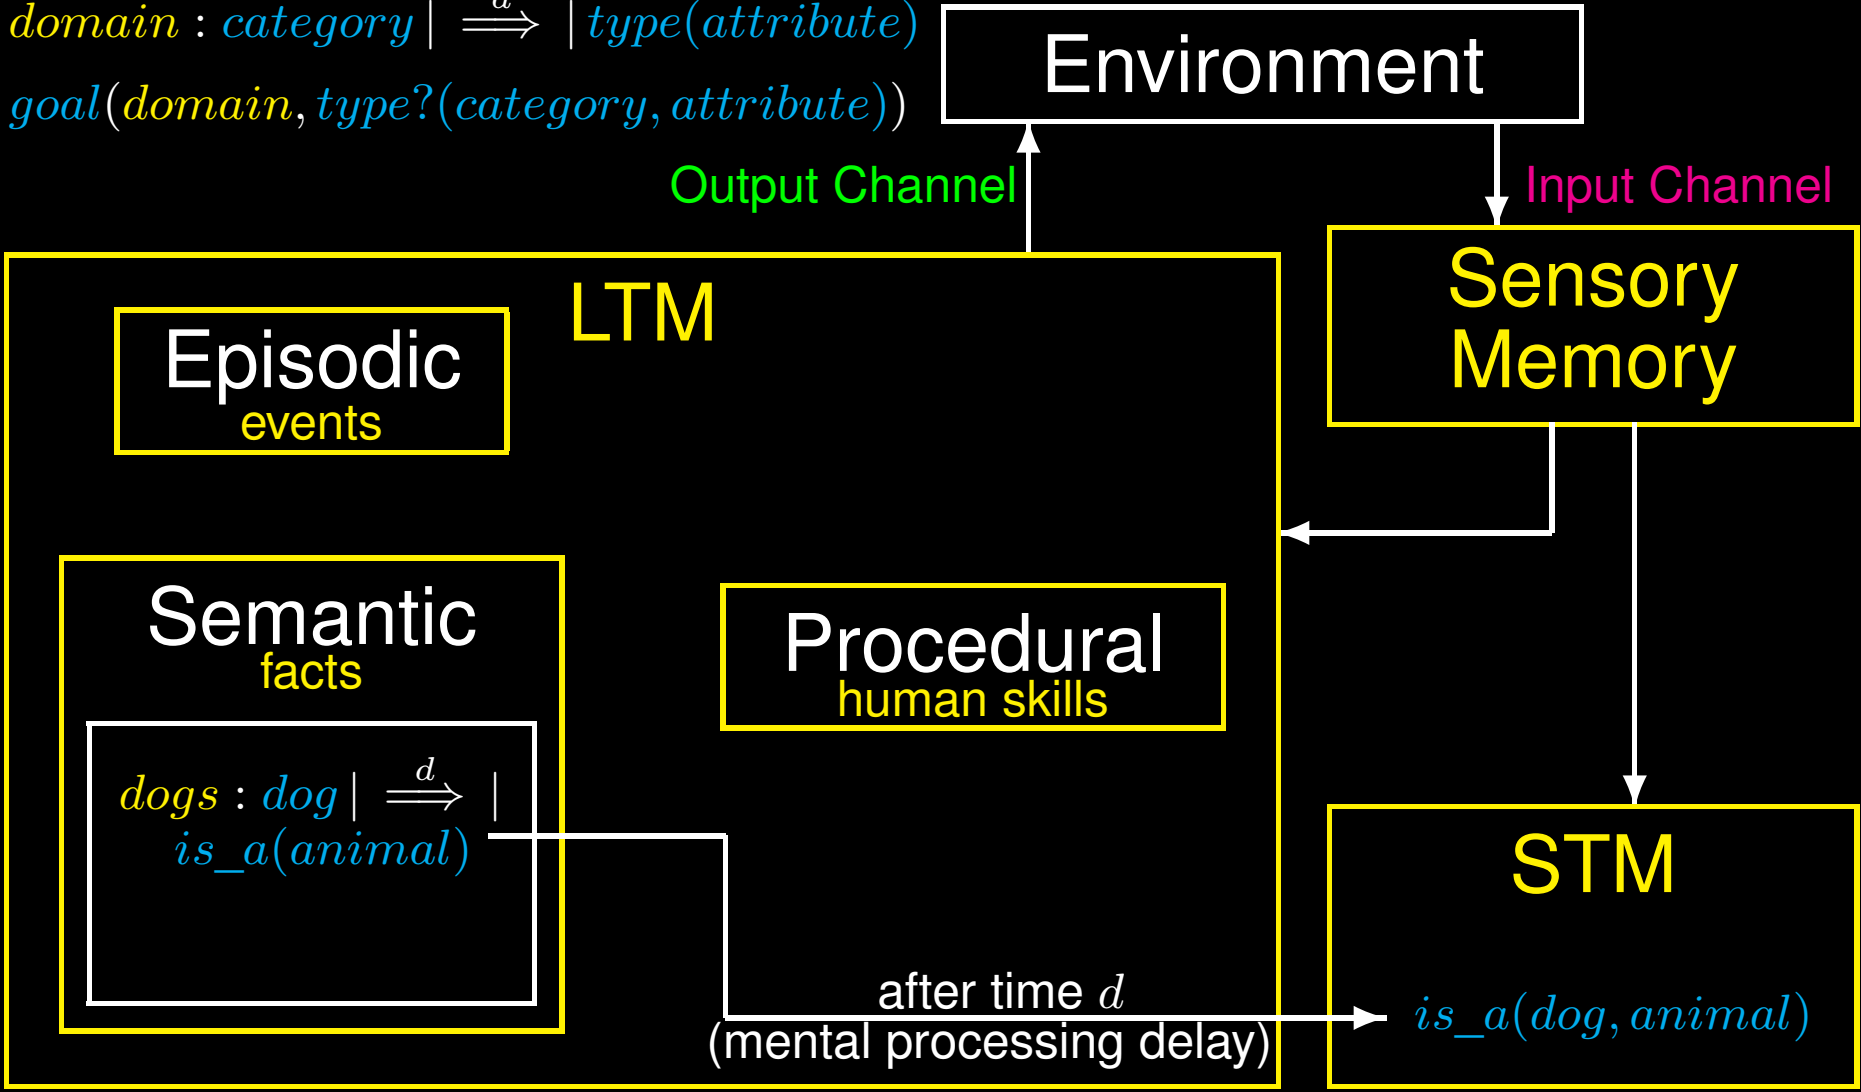

Knowledge Retrieval

$domain : category \mid \xRightarrow{d} \mid type(attribute)$
 $goal(domain, type?(category, attribute))$

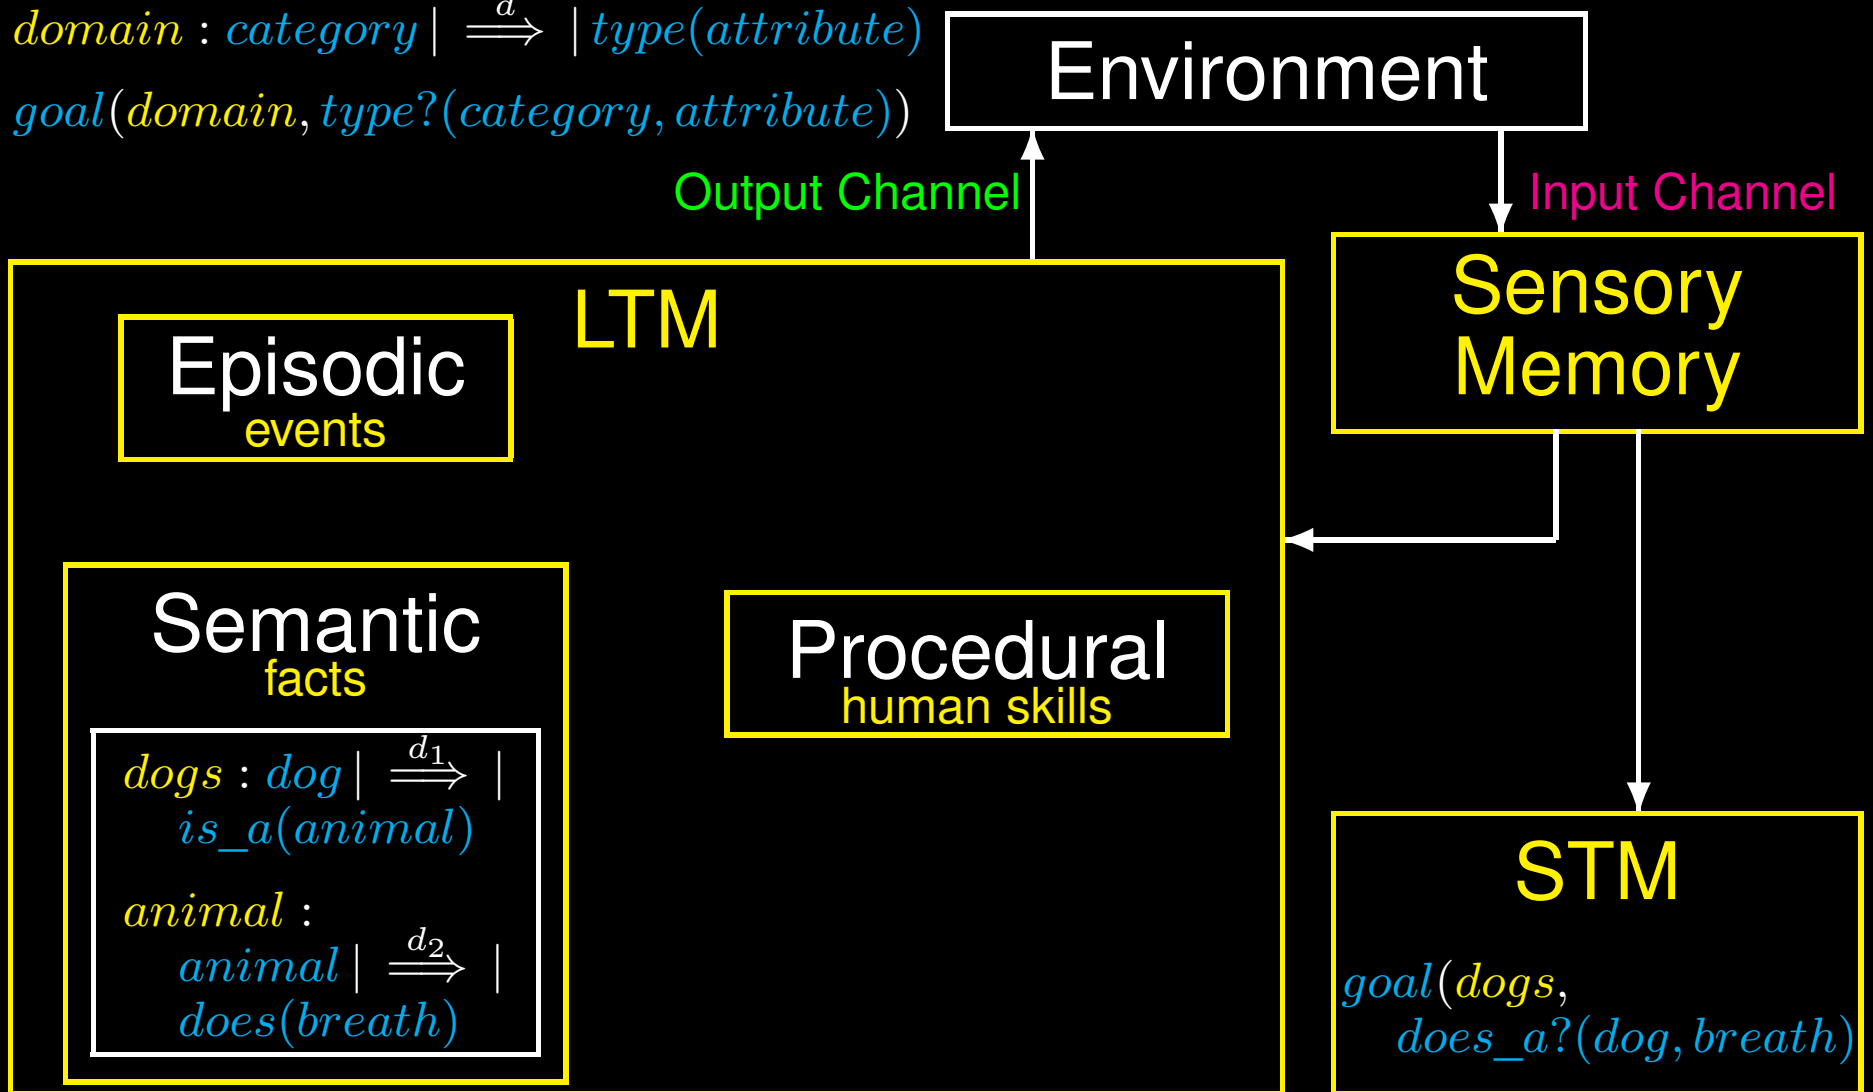

Retrieval Outcome

$domain : category \mid \xRightarrow{d} \mid type(attribute)$
 $goal(domain, type?(category, attribute))$

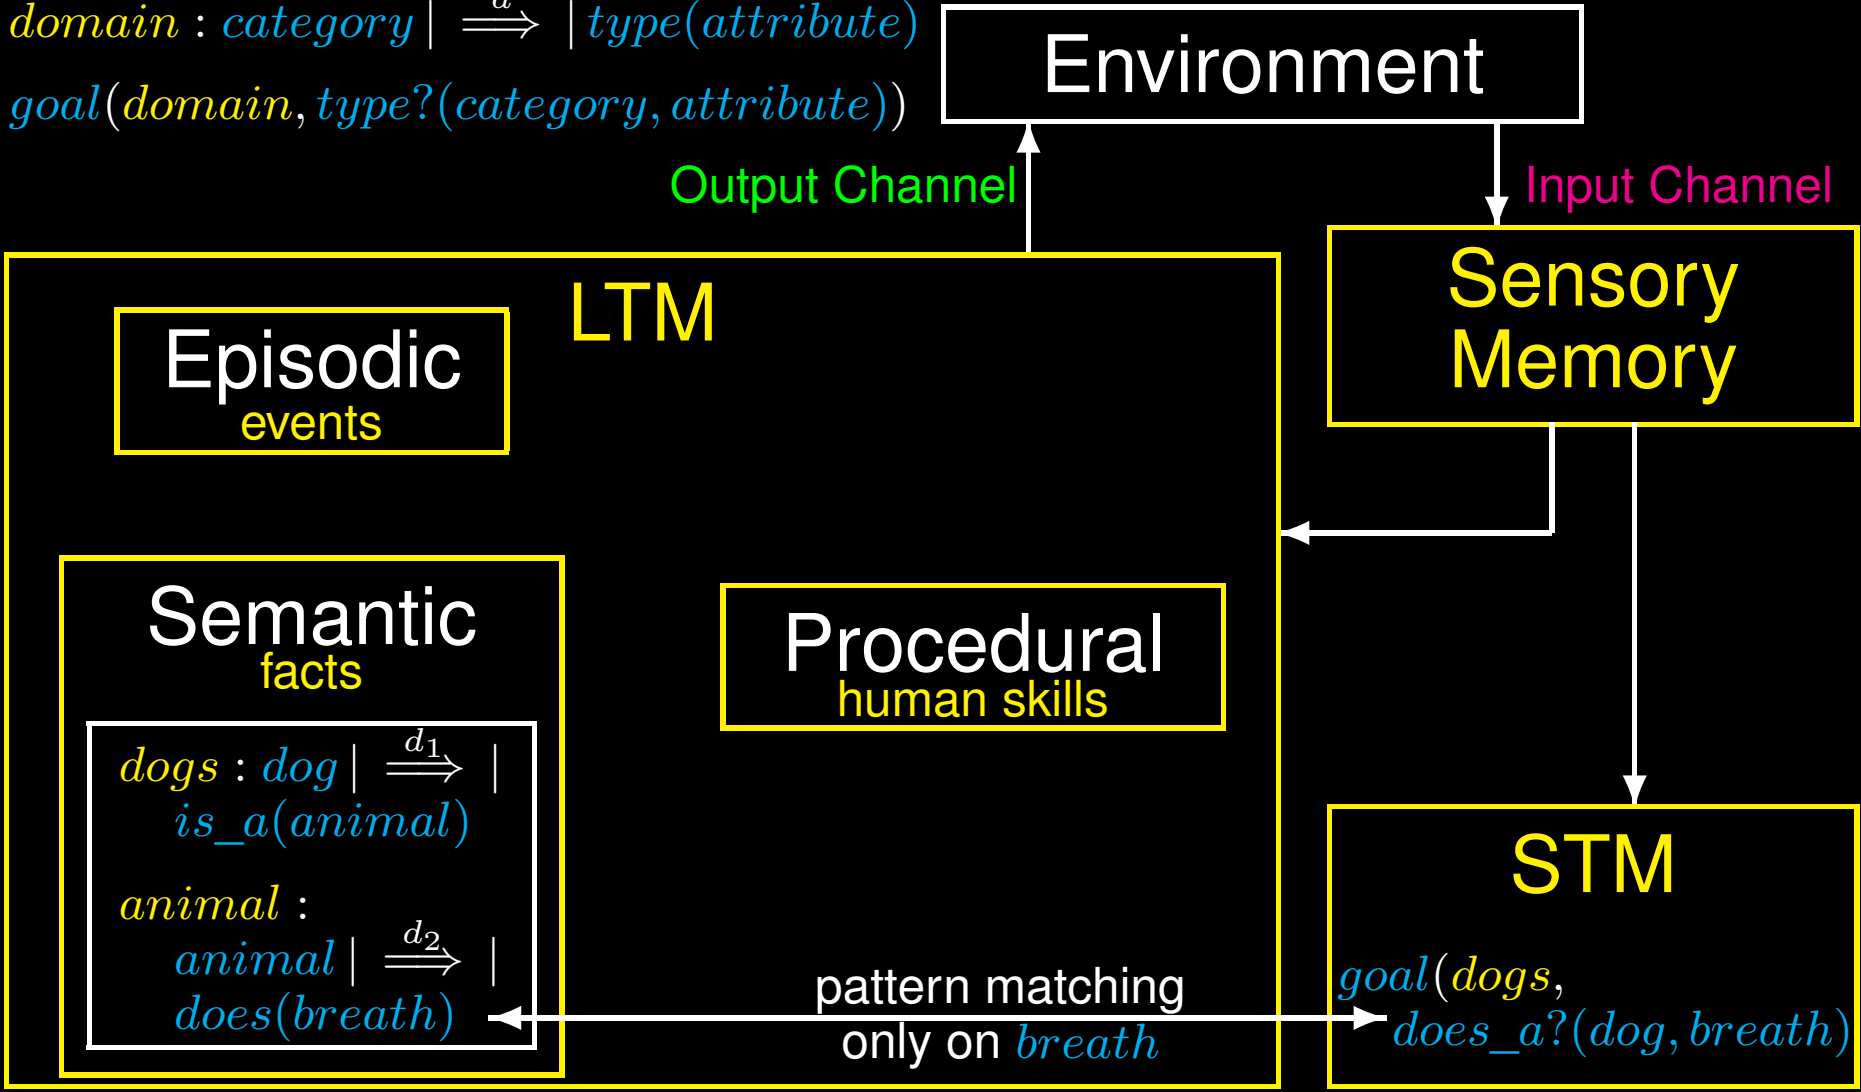

Deeper Retrieval

$domain : category \mid \xRightarrow{d} \mid type(attribute)$
 $goal(domain, type?(category, attribute))$

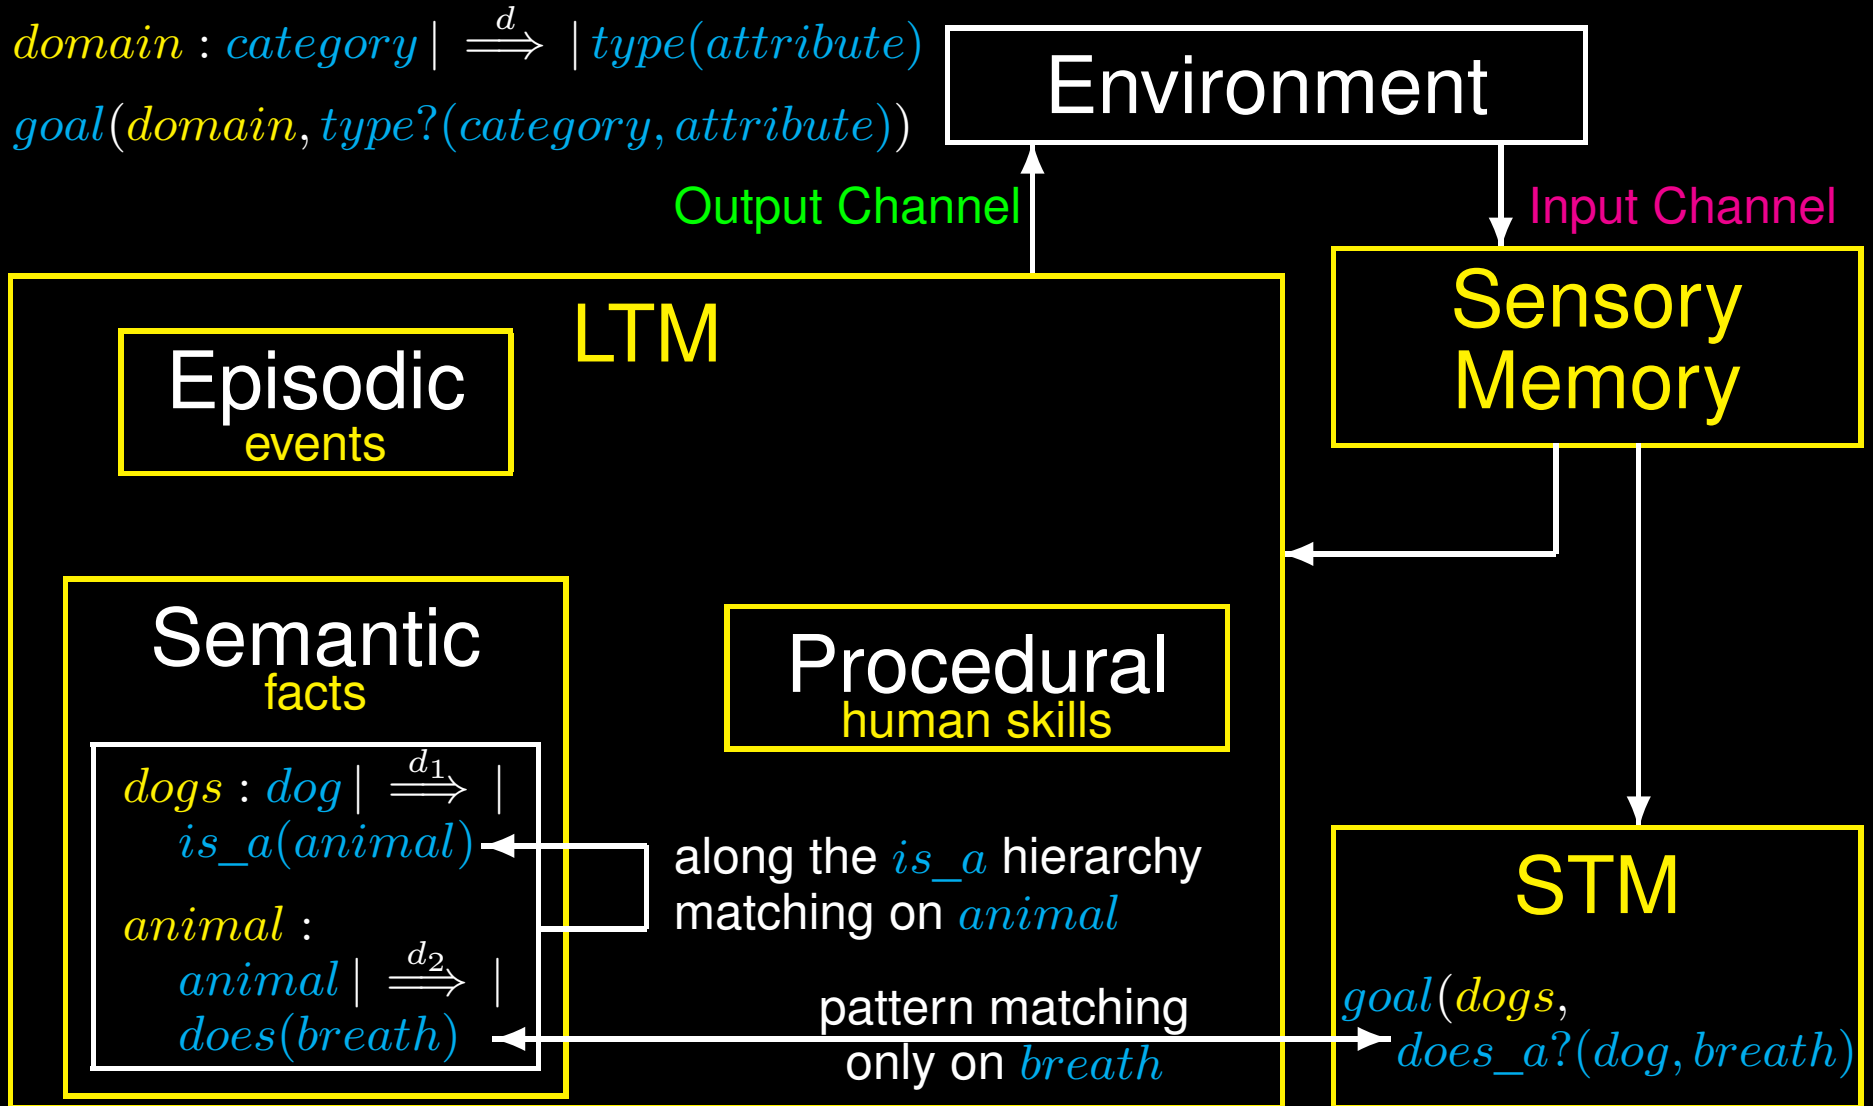

Deeper Retrieval

$domain : category \mid \xRightarrow{d} \mid type(attribute)$
 $goal(domain, type?(category, attribute))$

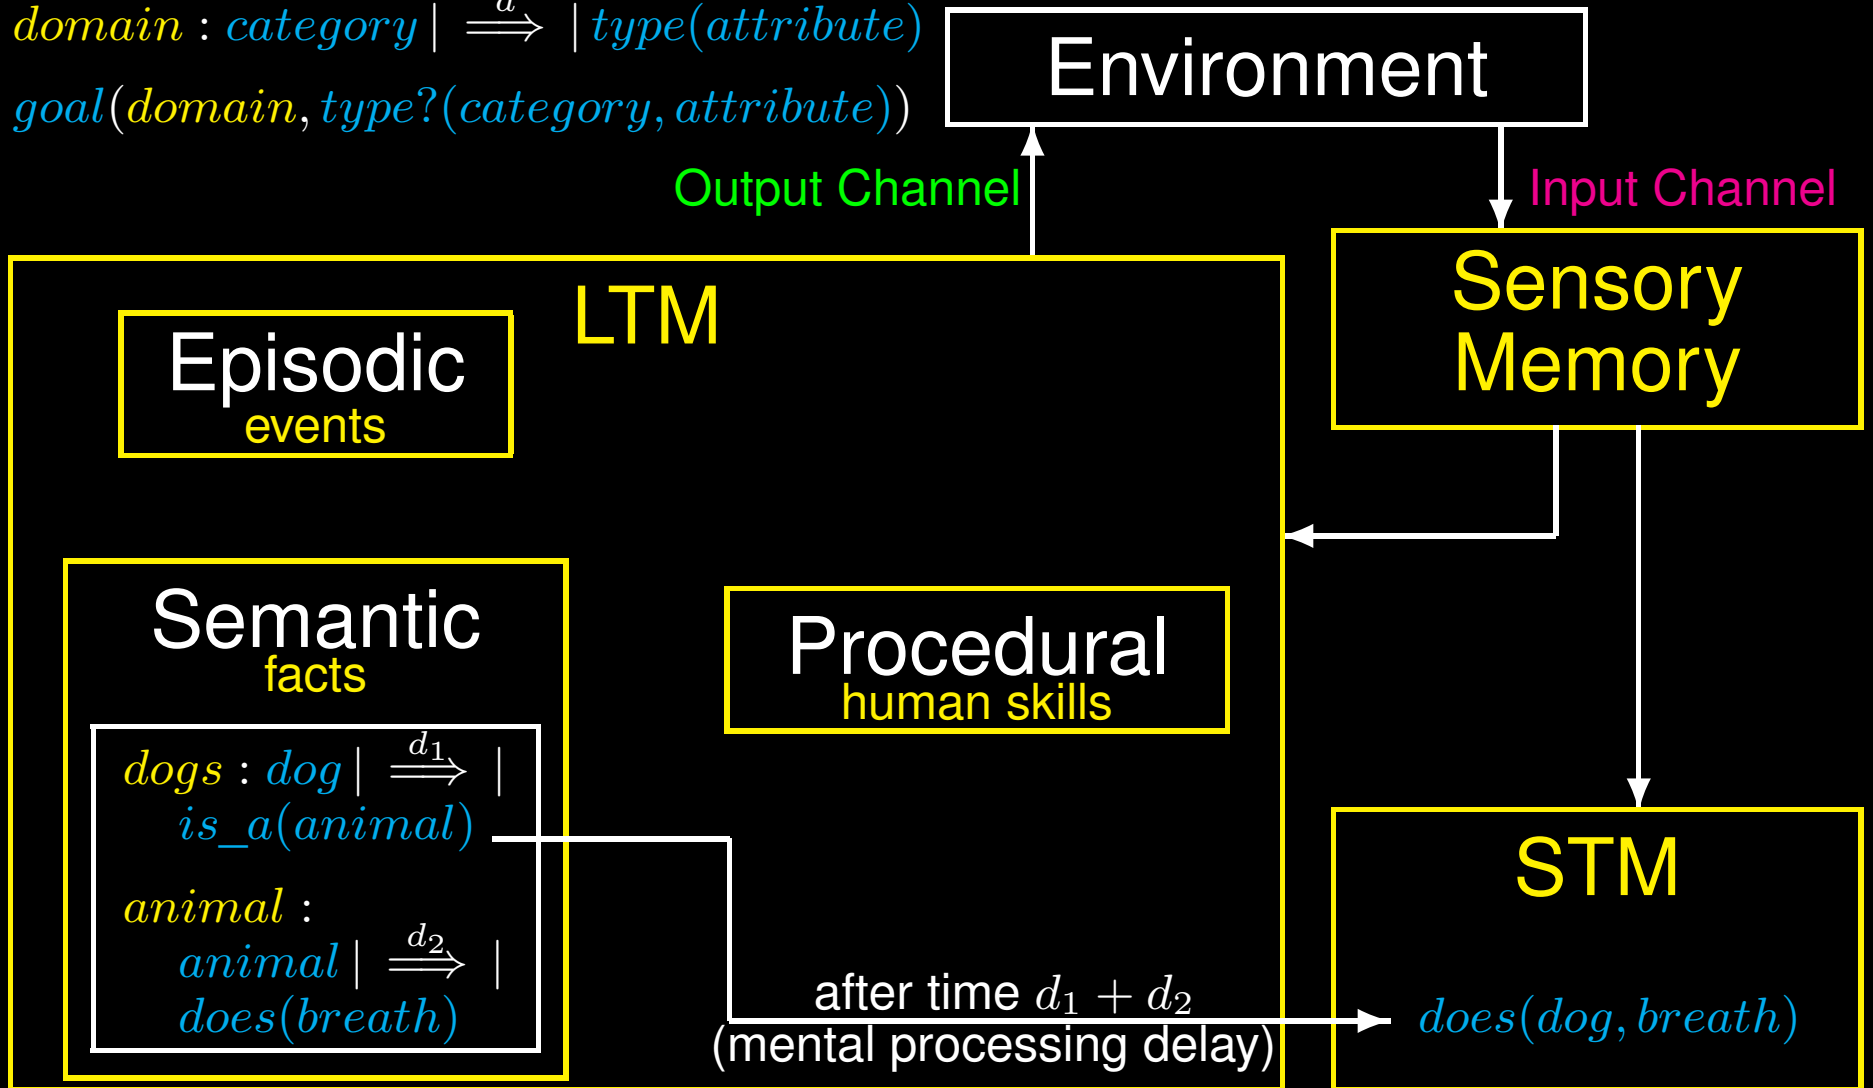

Deeper Retrieval

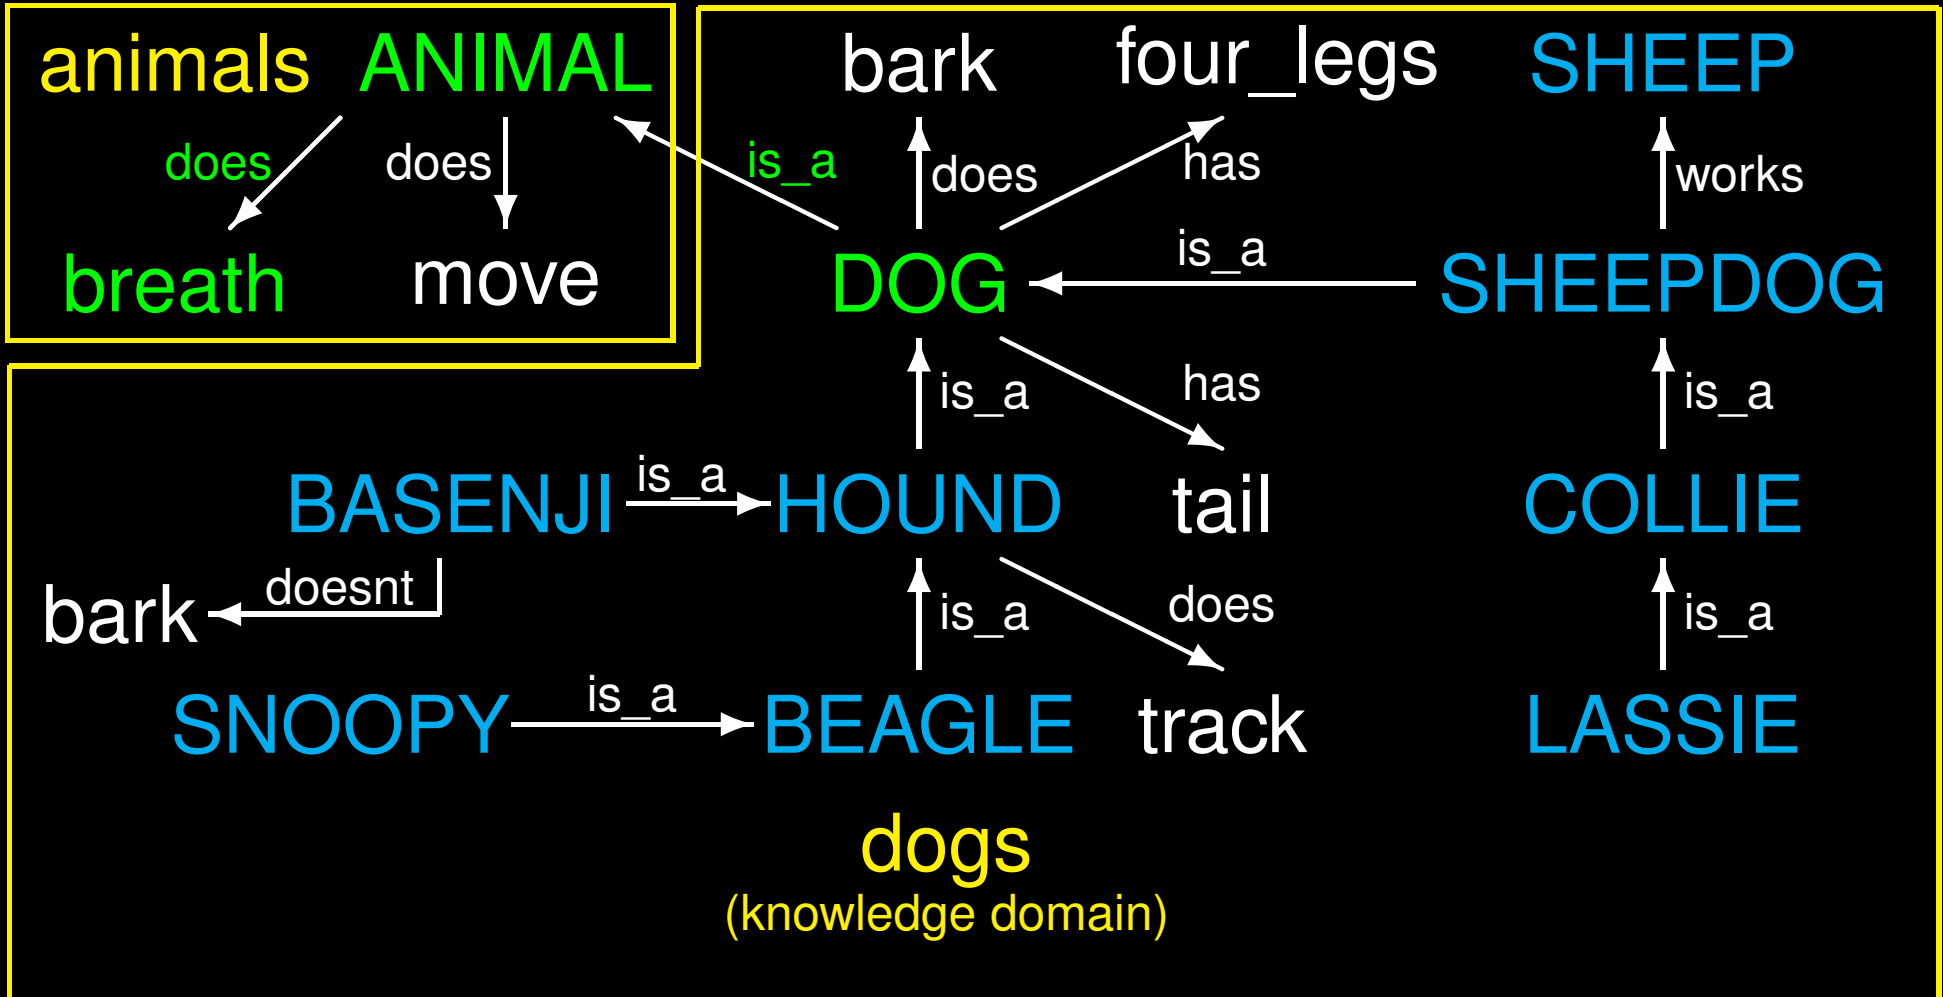

Deeper Retrieval Outcome

$domain : category \mid \xRightarrow{d} \mid type(attribute)$
 $goal(domain, type?(category, attribute))$

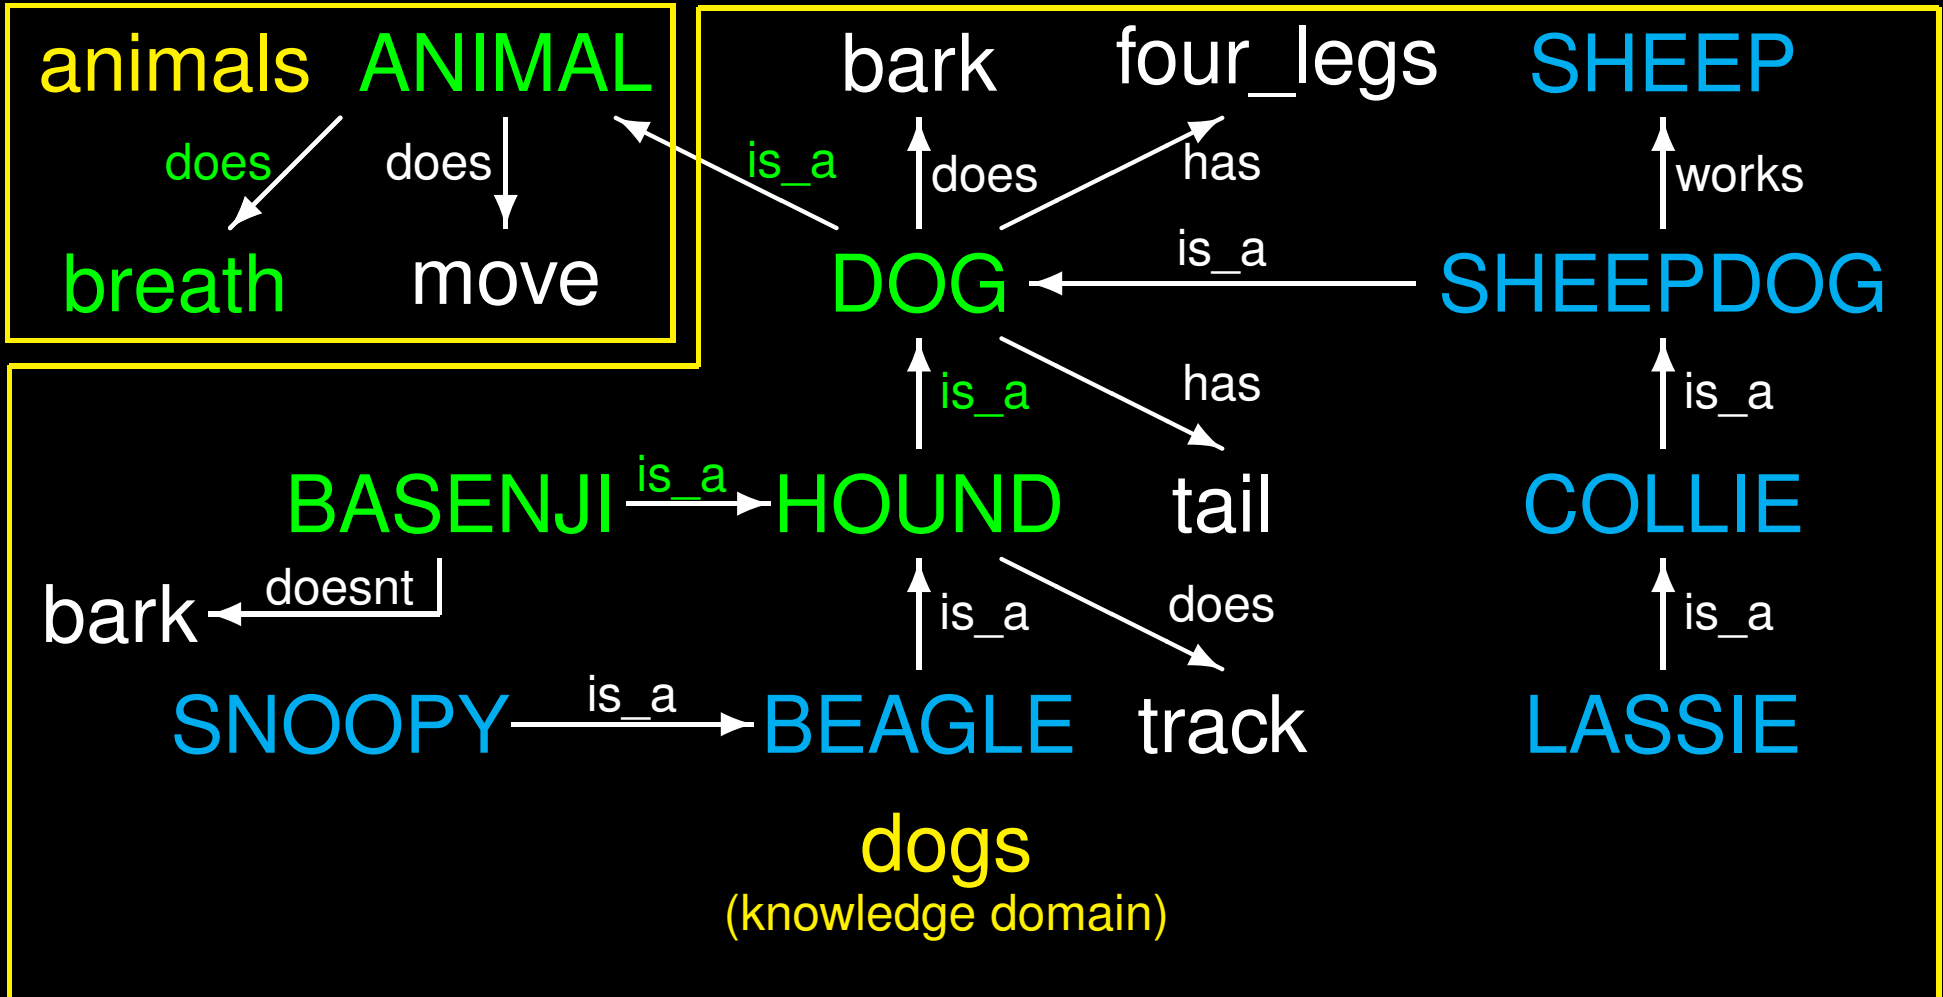

Climbing the Semantic Network

does(dog, breath)

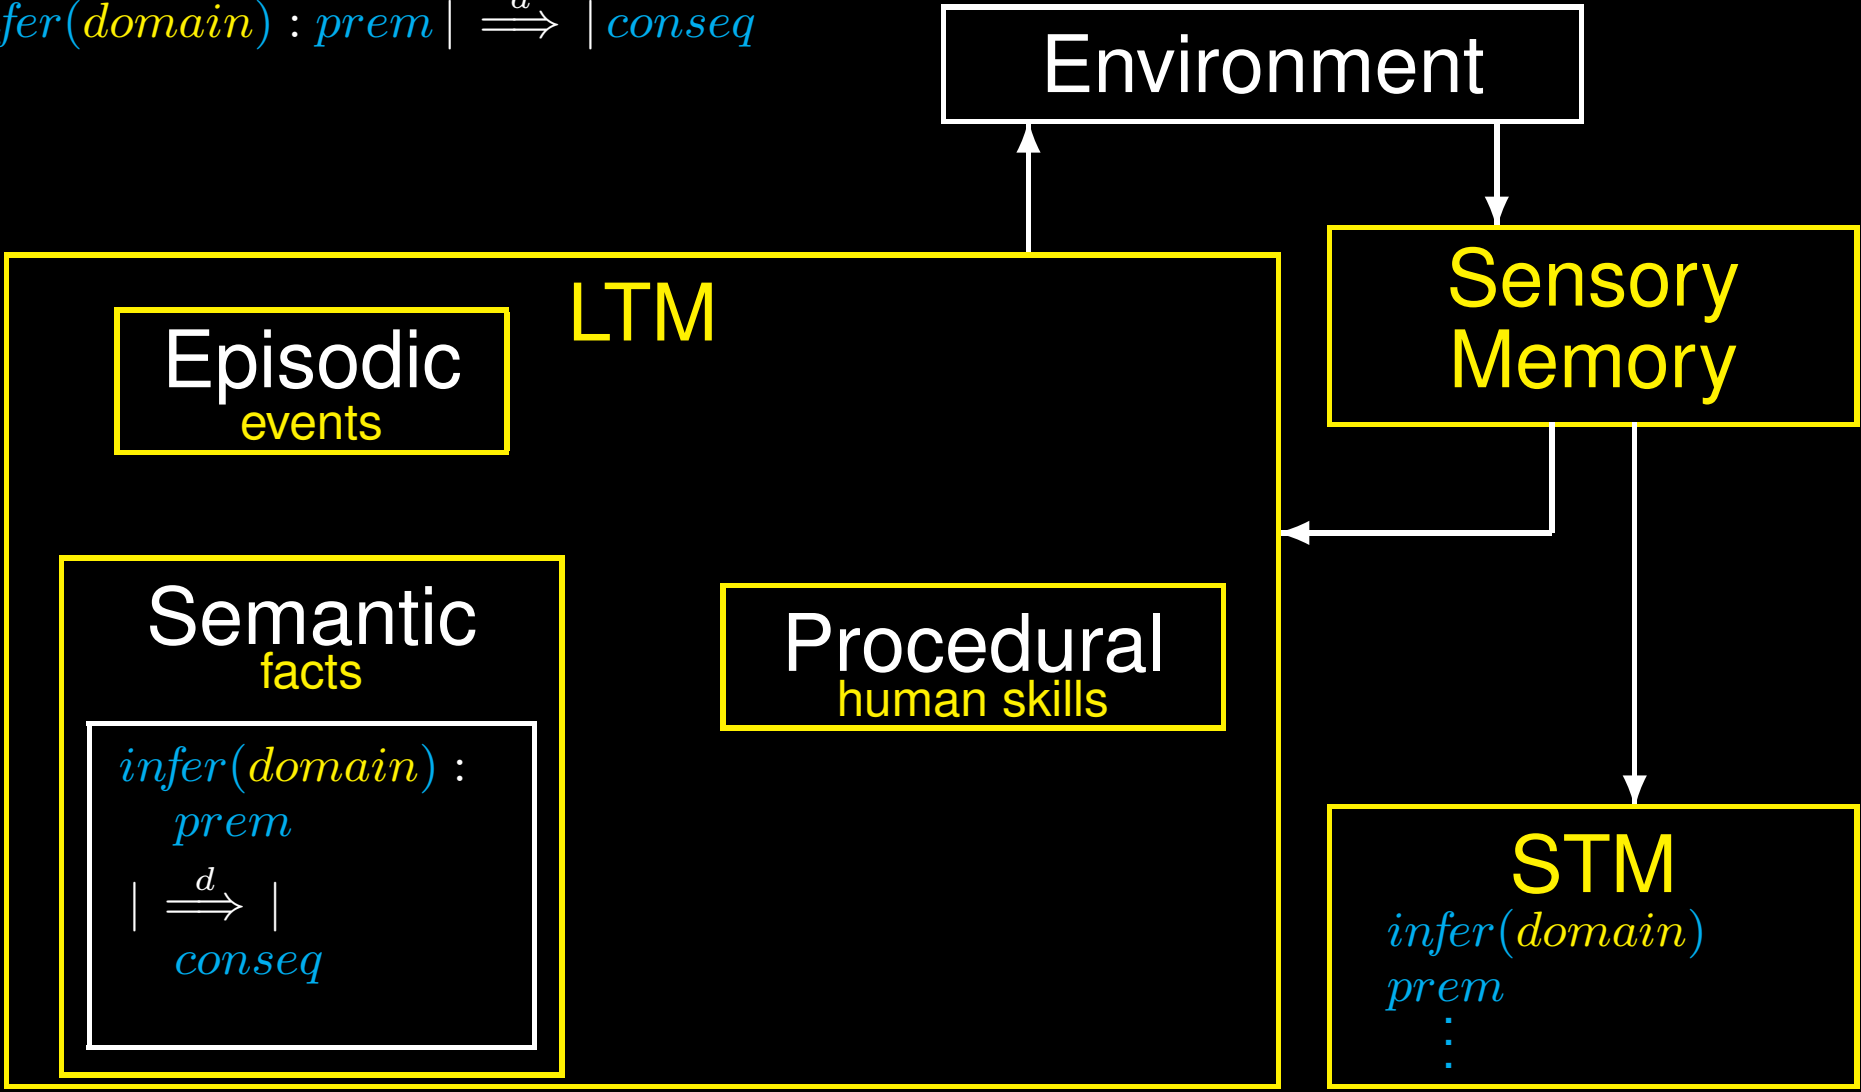

Climbing the Semantic Network

does(basenji, breath)

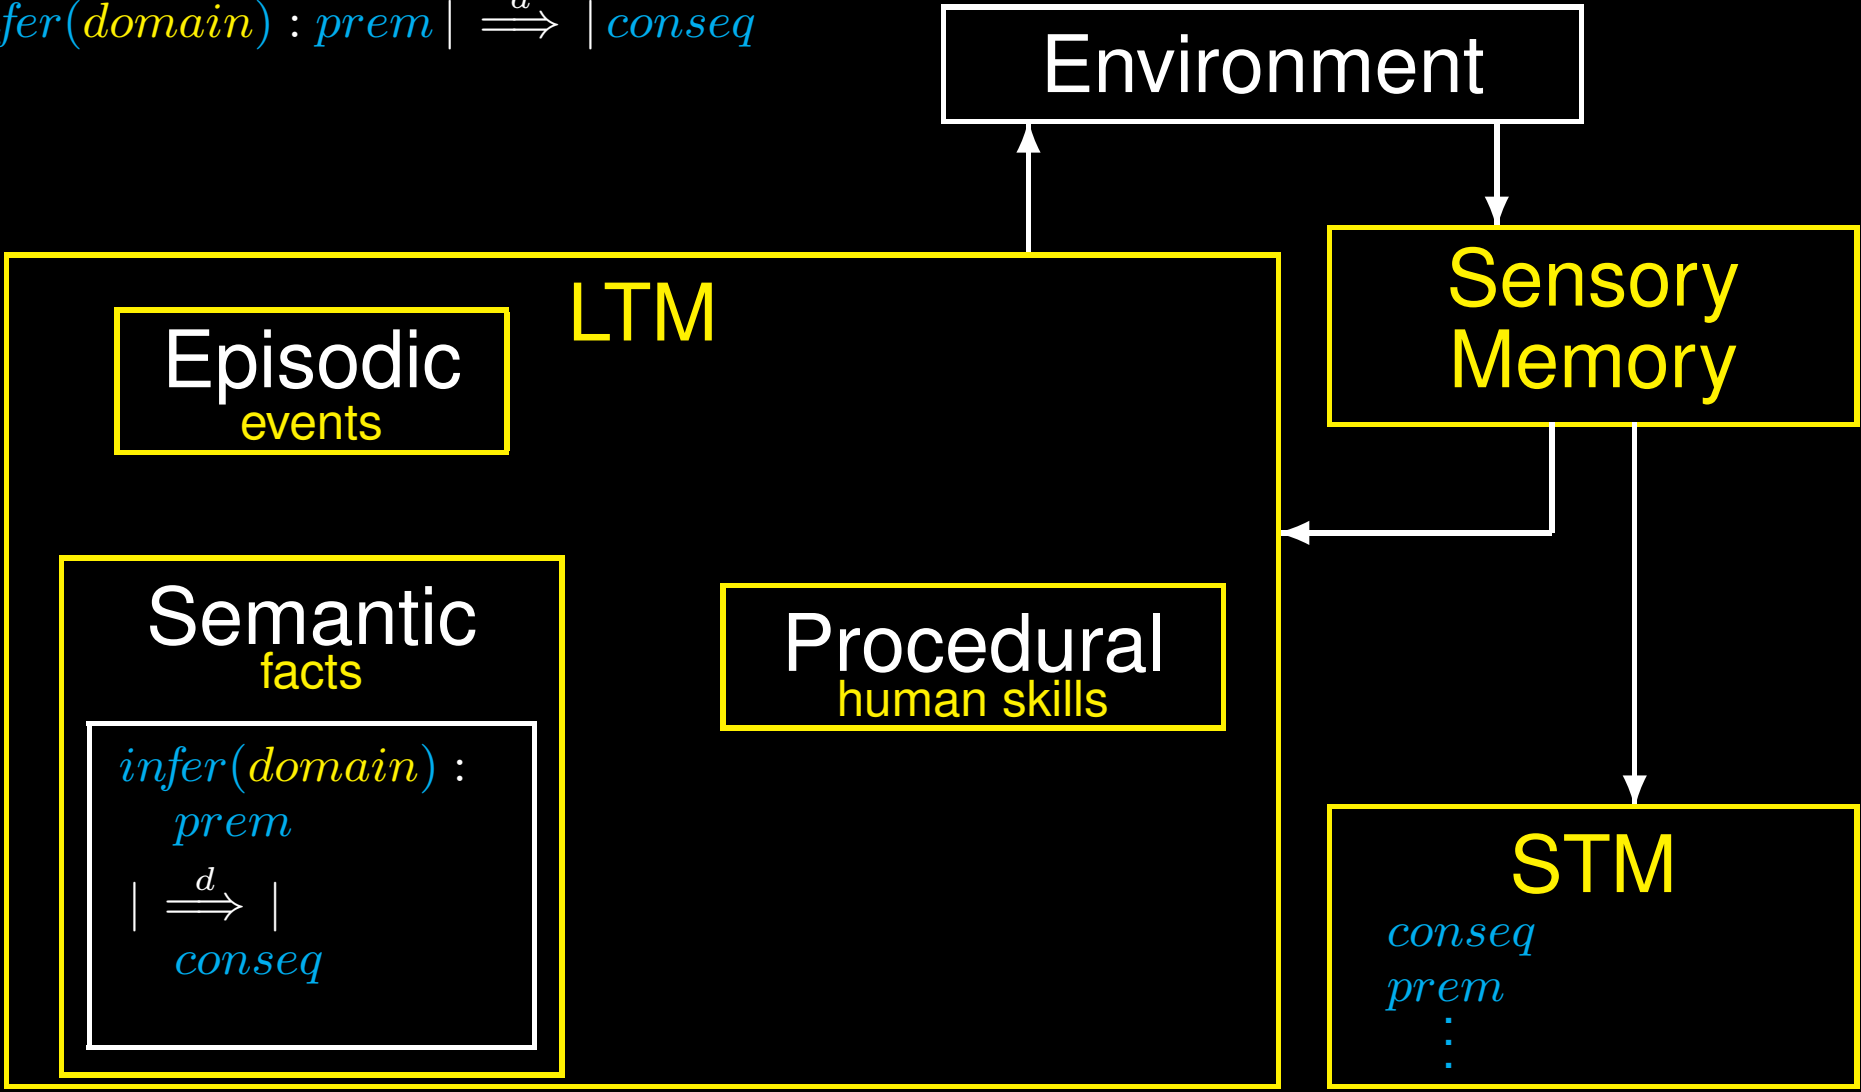

Deliberate Control: Reasoning

$infer(domain) : prem \mid \xRightarrow{d} \mid conseq$

Deliberate Control: Reasoning

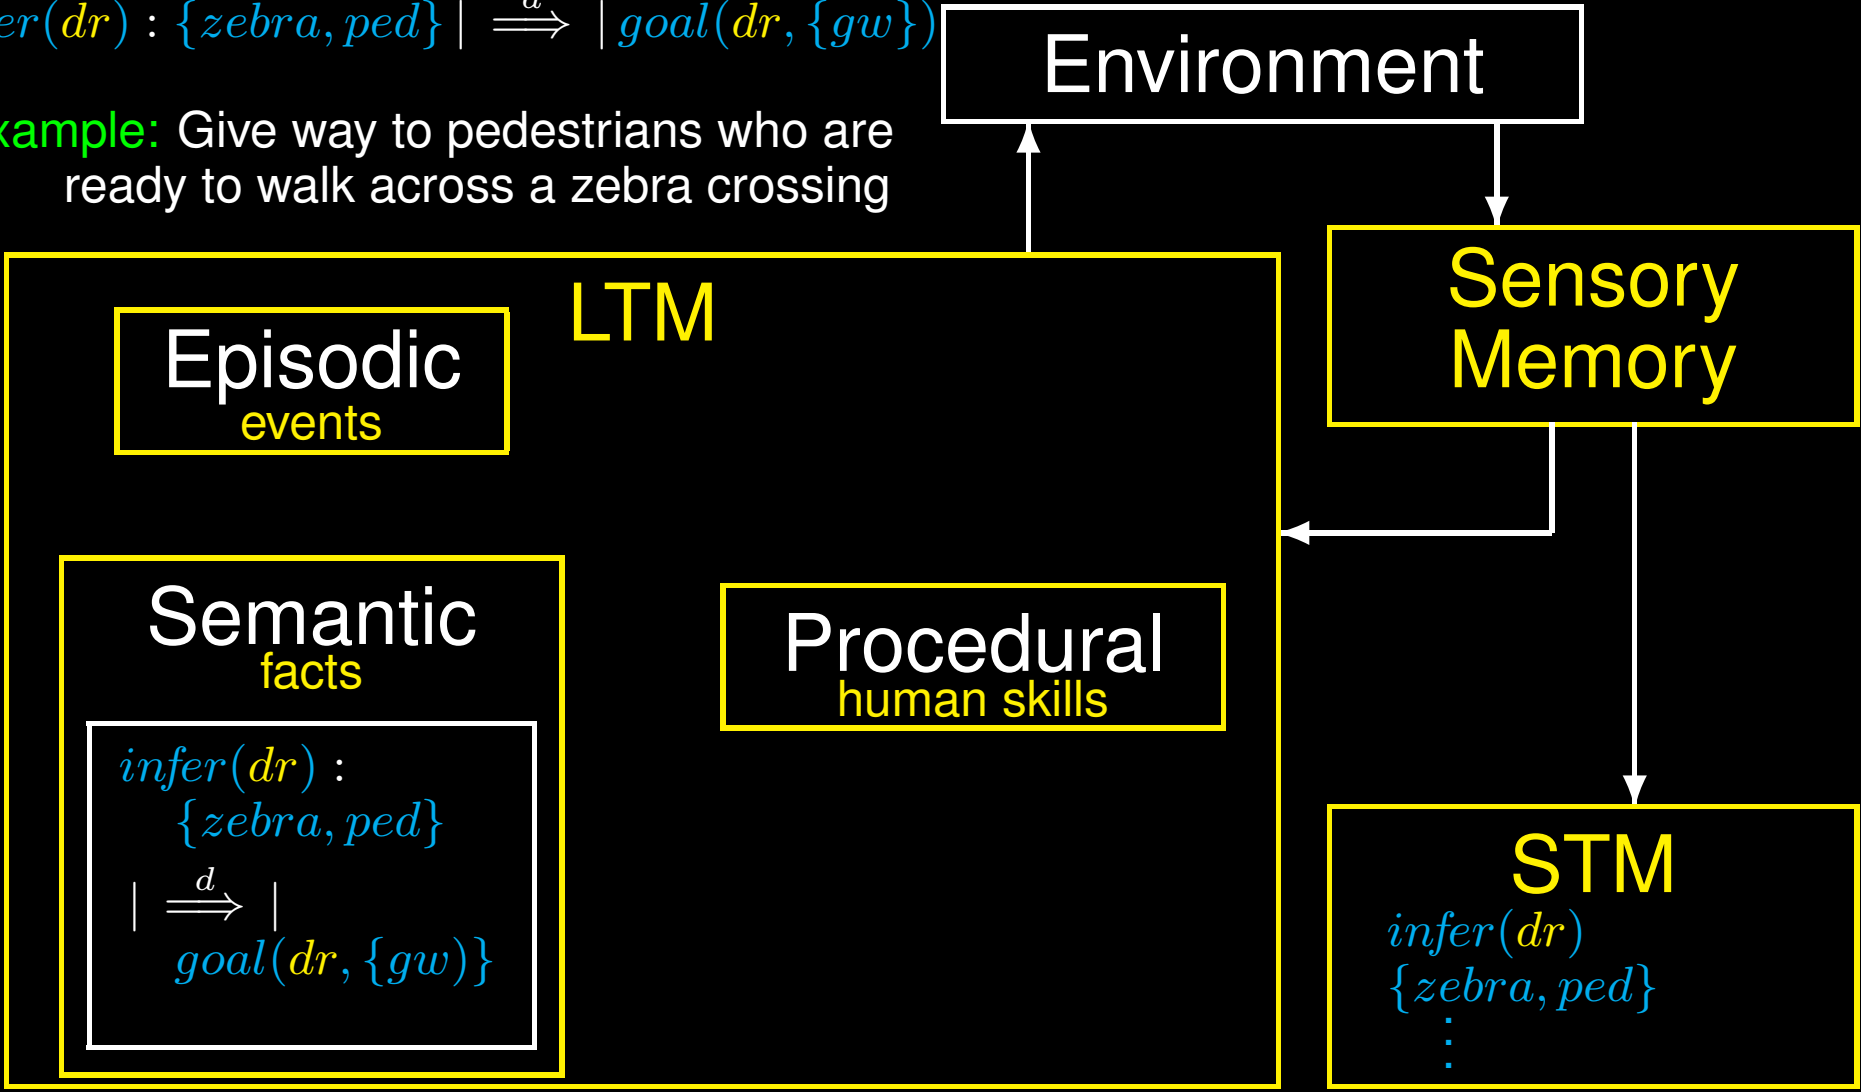

$infer(domain) : prem \mid \xRightarrow{d} \mid conseq$

Reasoning Example

$$\text{infer}(dr) : \{zebra, ped\} \mid \xRightarrow{d} \mid \text{goal}(dr, \{gw\})$$

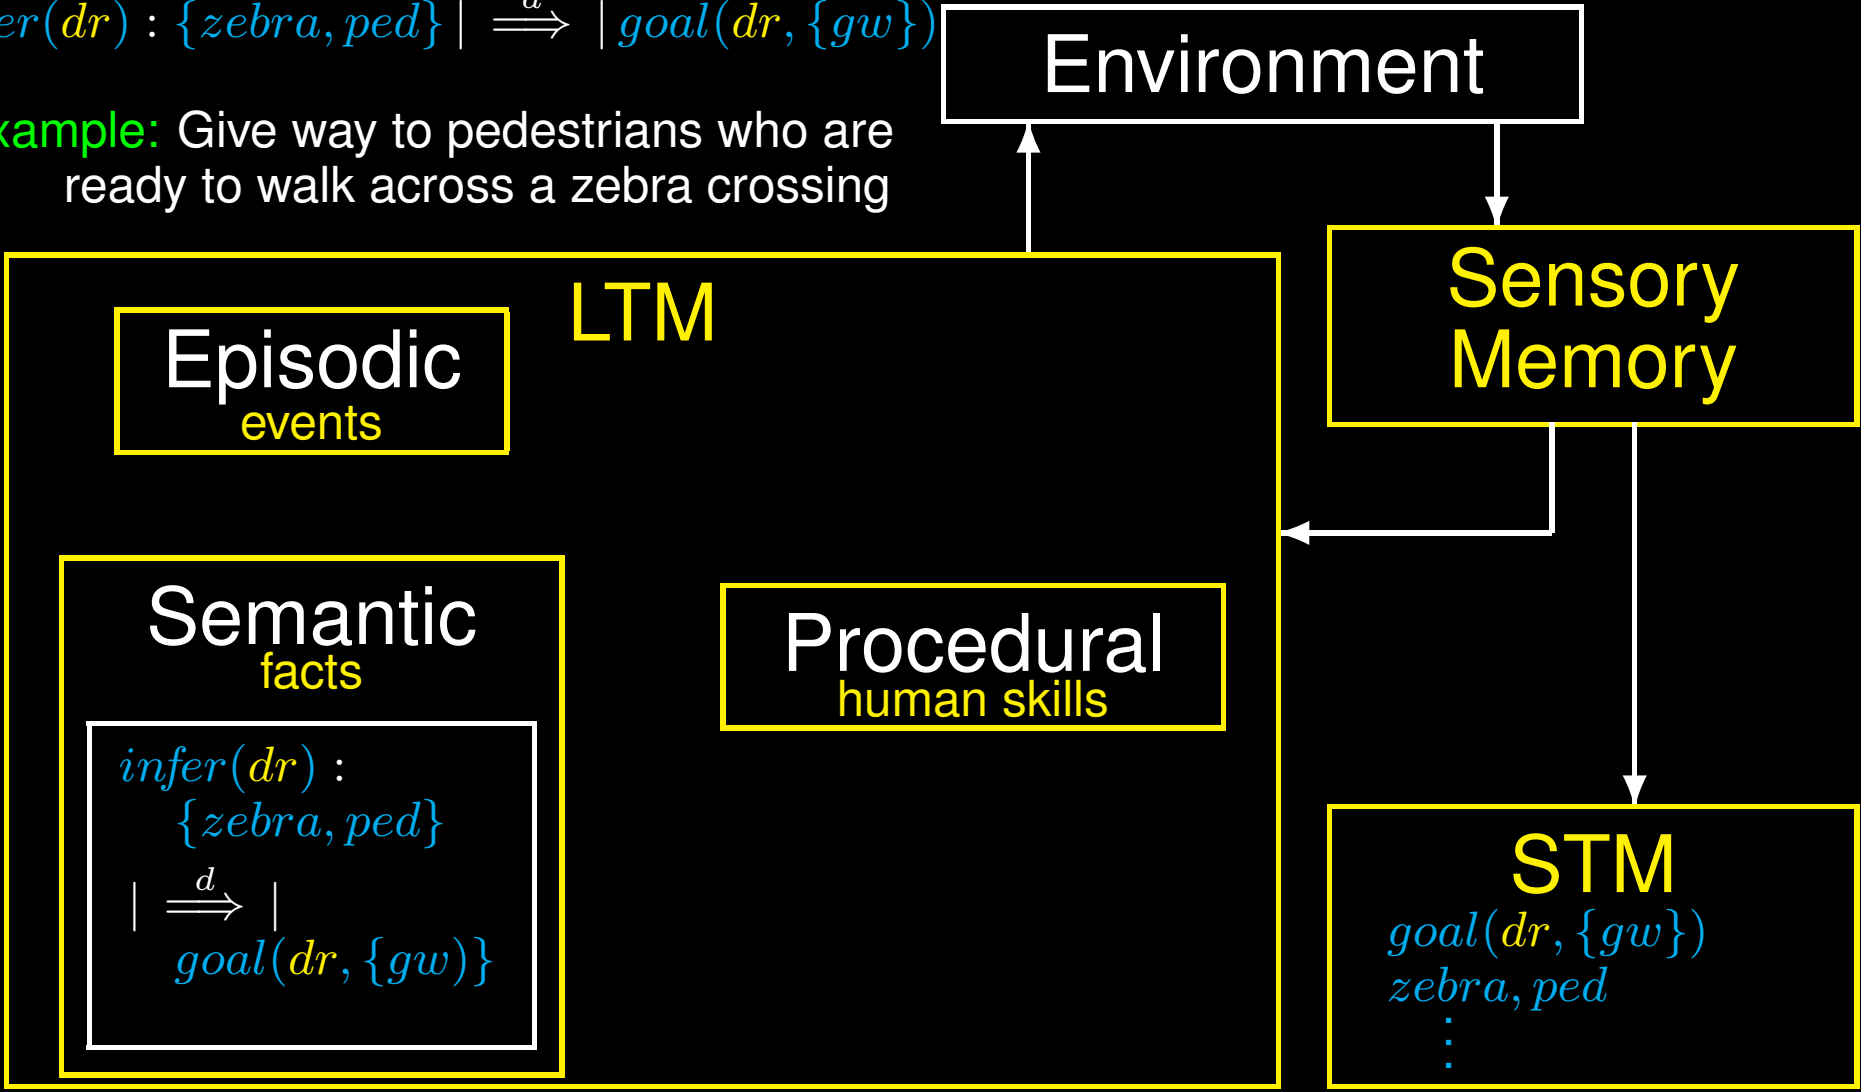

Example: Give way to pedestrians who are ready to walk across a zebra crossing

Reasoning Example

$$\text{infer}(dr) : \{zebra, ped\} \mid \xRightarrow{d} \mid \text{goal}(dr, \{gw\})$$

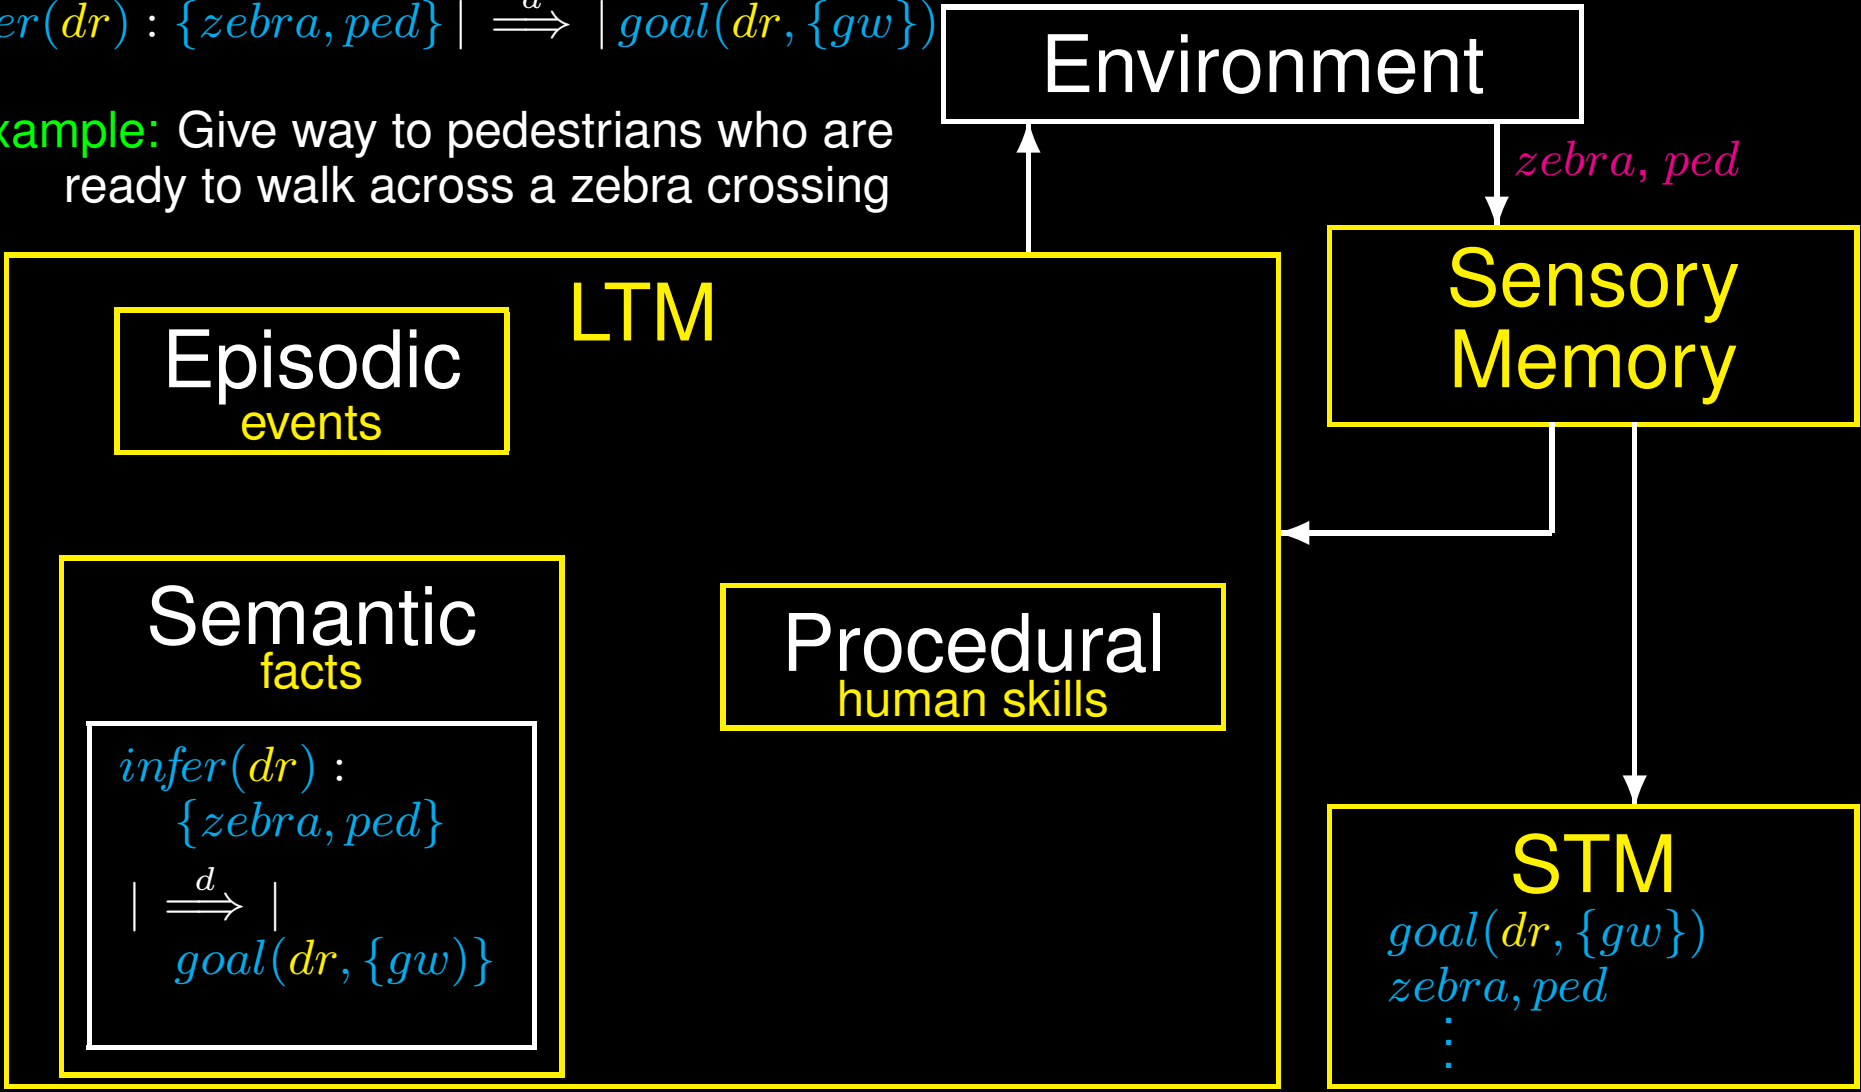

Example: Give way to pedestrians who are ready to walk across a zebra crossing

Reasoning Example

$infer(dr) : \{zebra, ped\} \mid \xRightarrow{d} \mid goal(dr, \{gw\})$

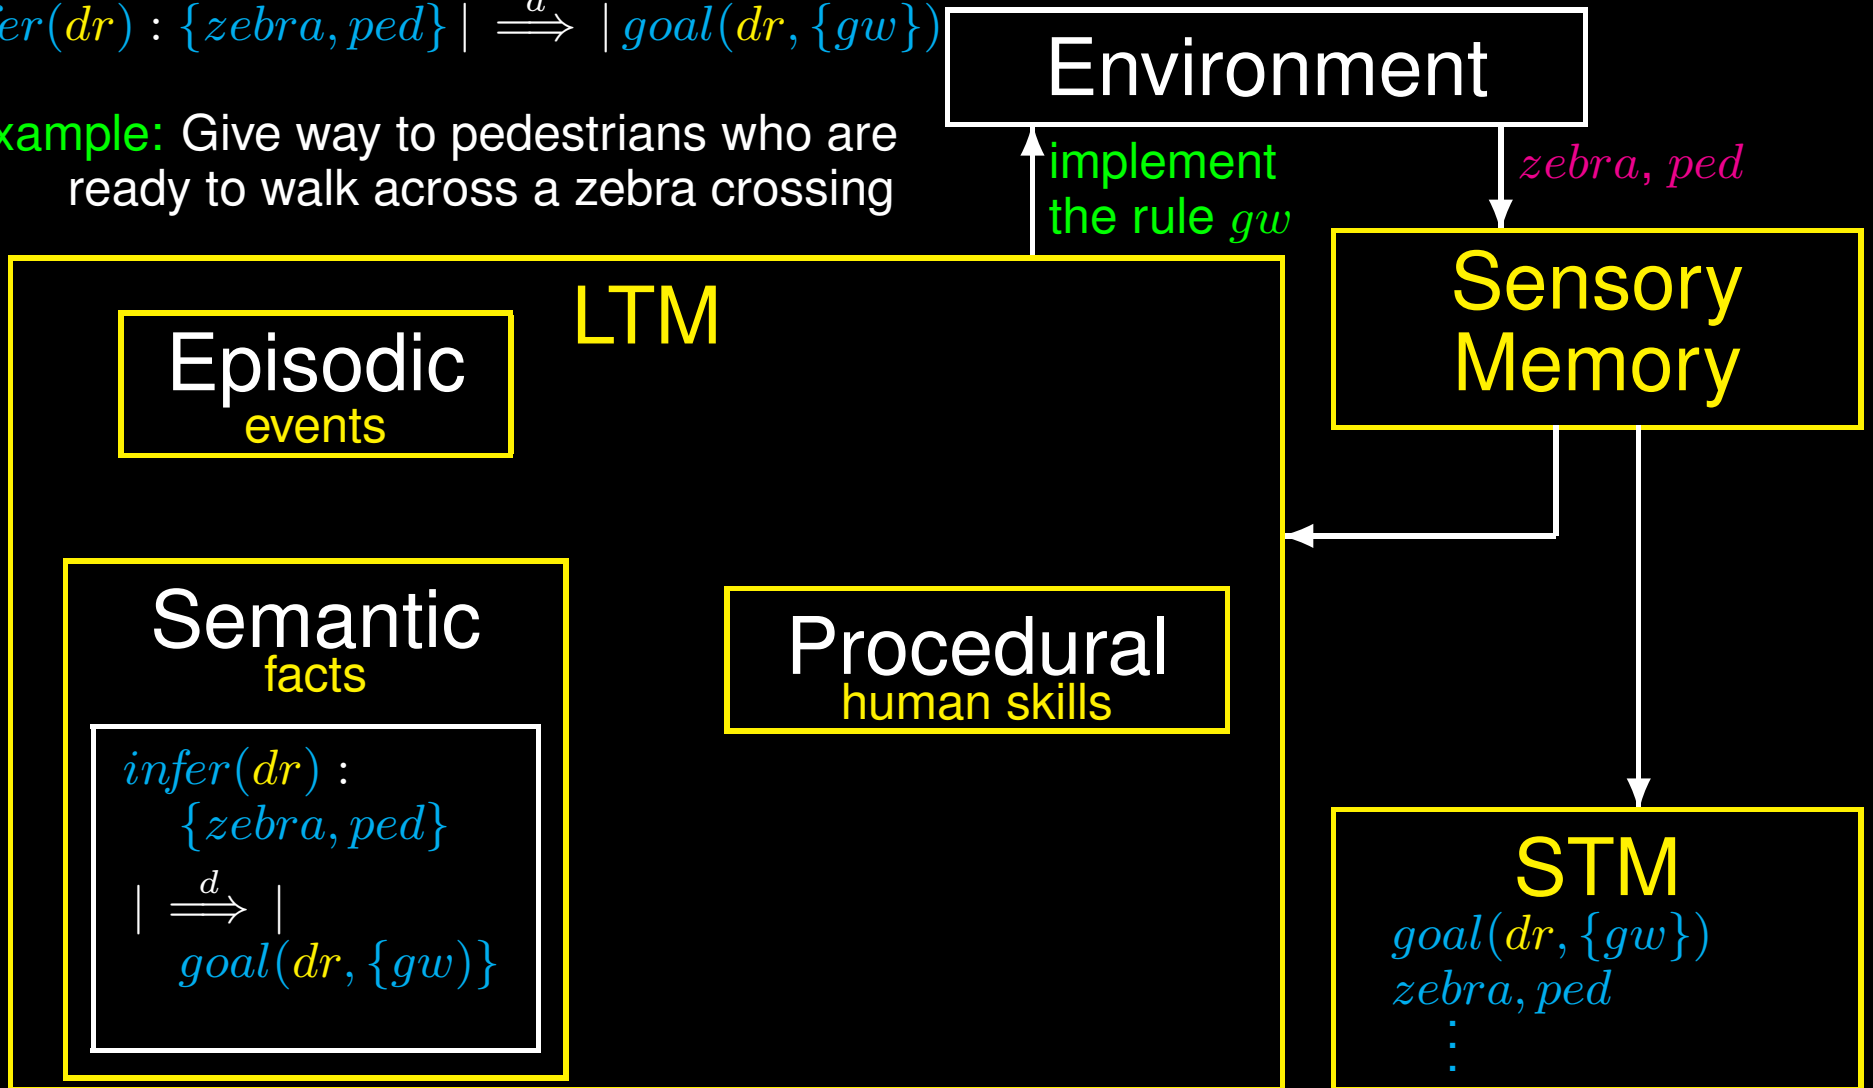

Example: Give way to pedestrians who are ready to walk across a zebra crossing

Reasoning Example

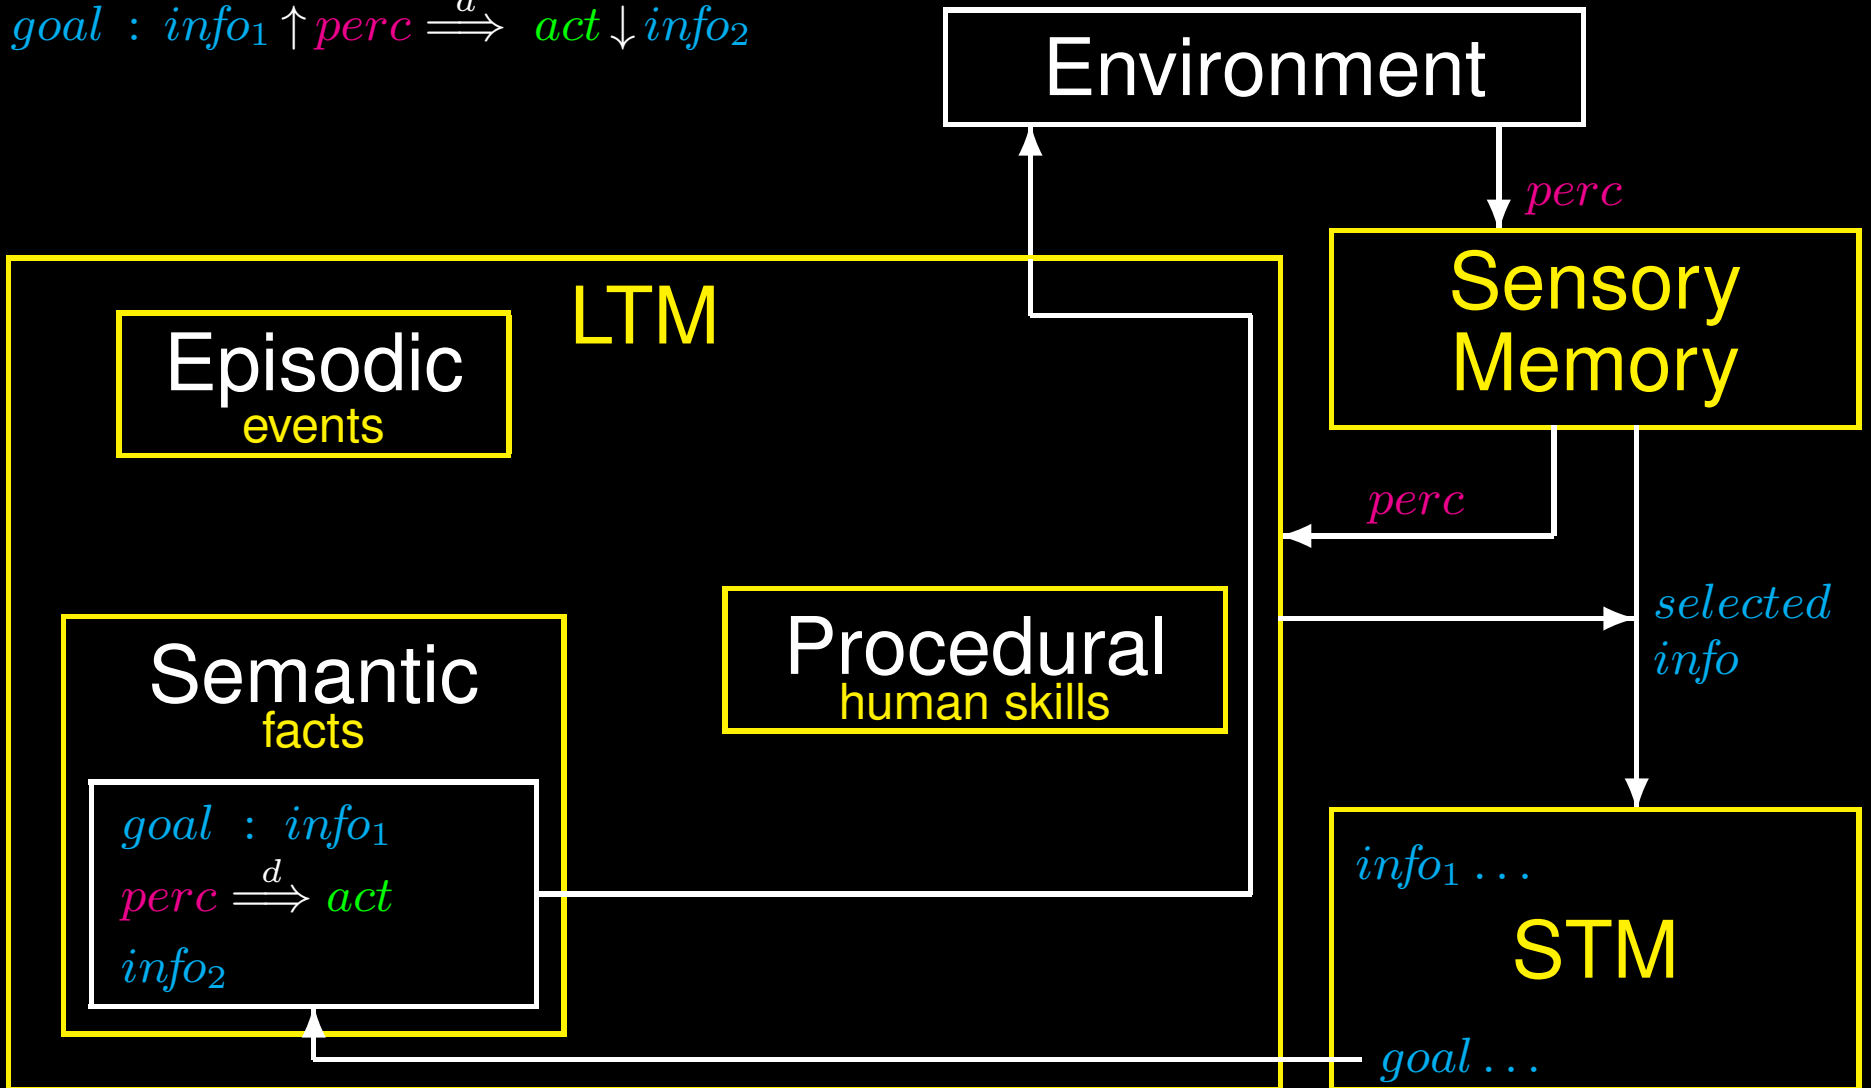

$$\text{infer}(dr) : \{zebra, ped\} \mid \xRightarrow{d} \mid \text{goal}(dr, \{gw\})$$

Example: Give way to pedestrians who are ready to walk across a zebra crossing

Deliberate Control: Behaviour

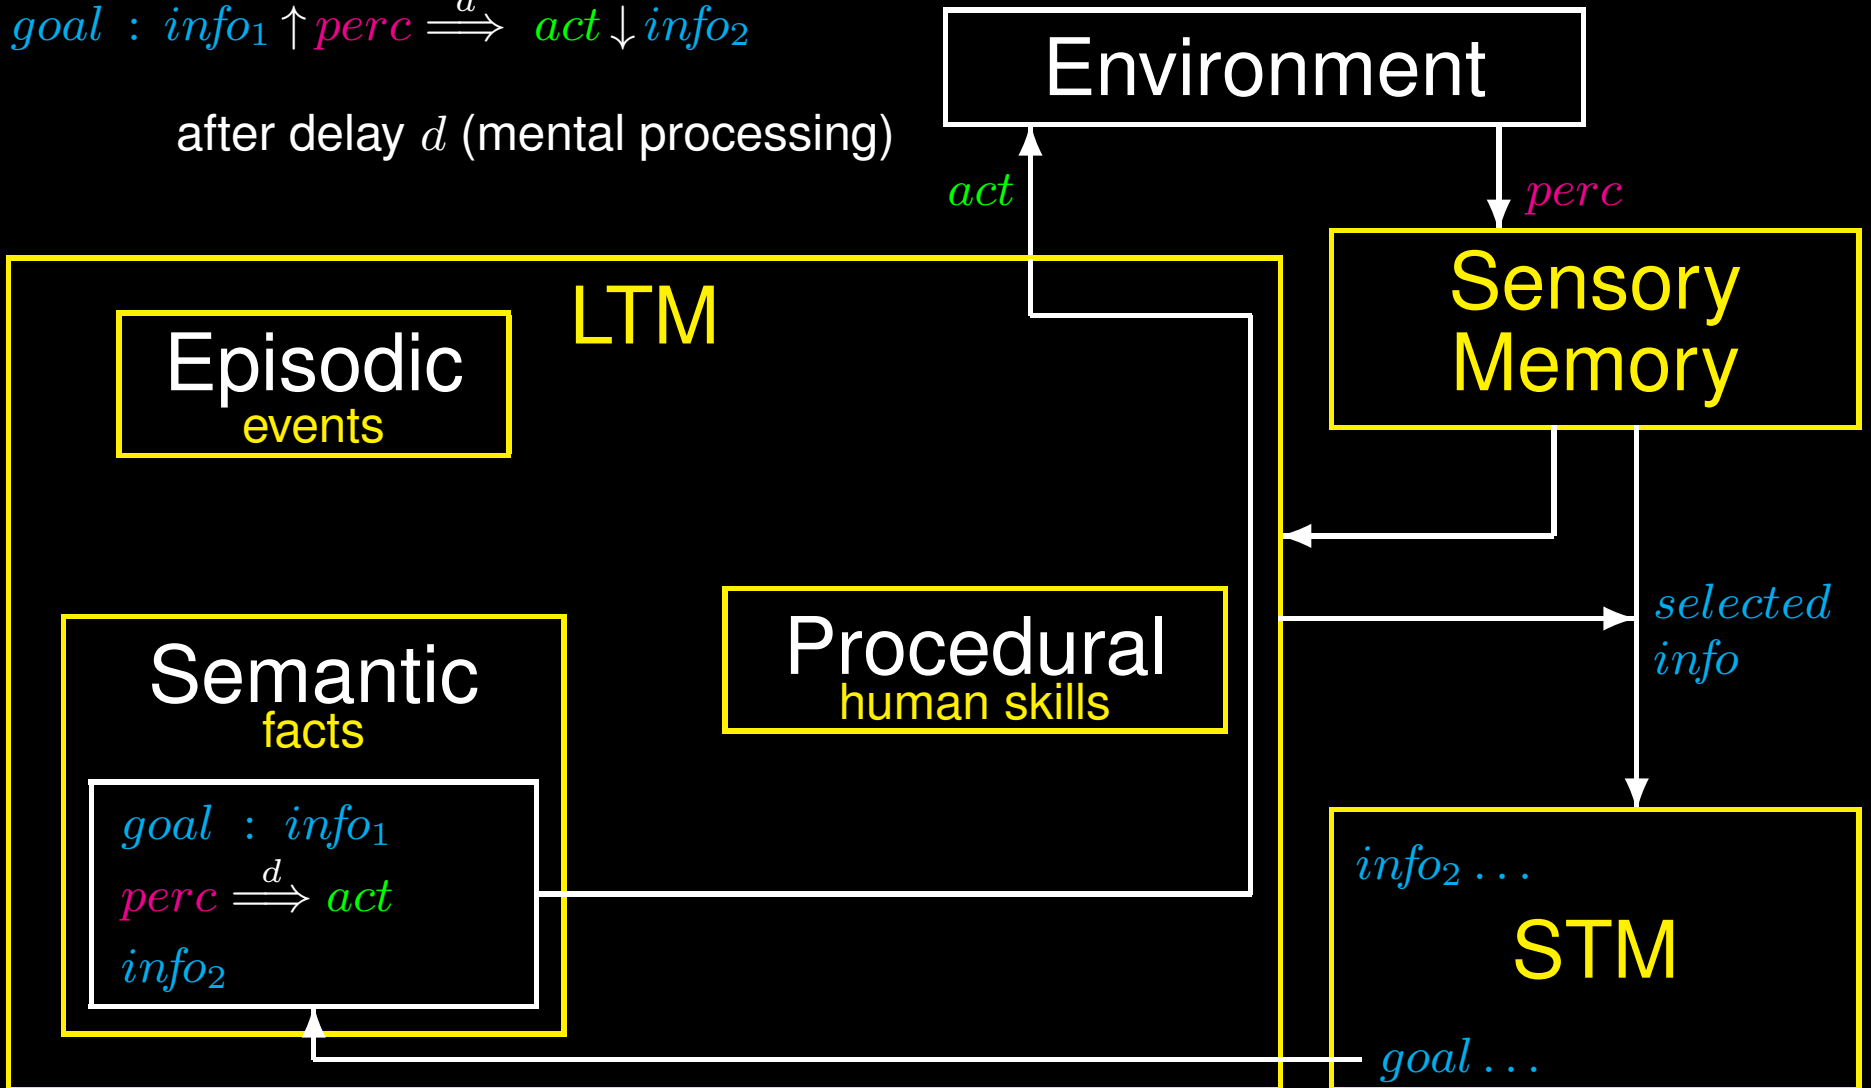

$goal : info_1 \uparrow perc \xrightarrow{d} act \downarrow info_2$

Deliberate Control: Behaviour

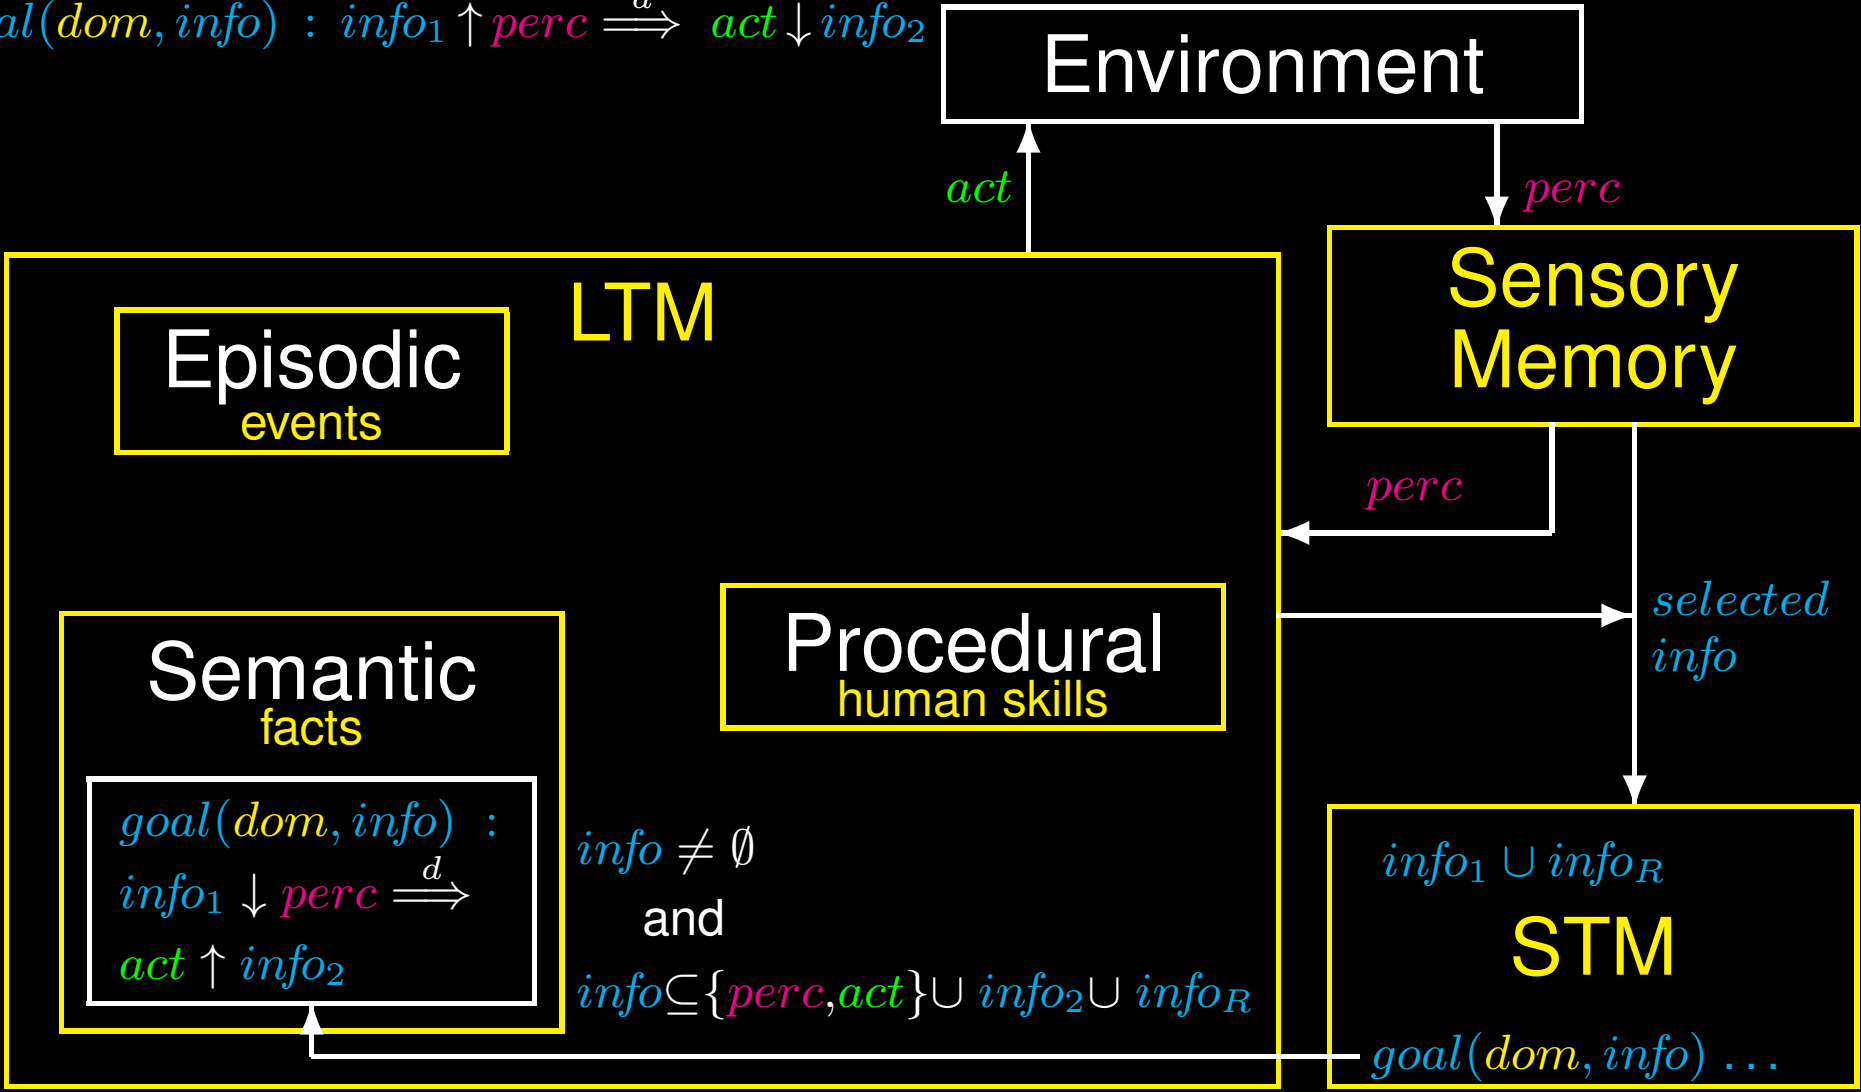

$goal : info_1 \uparrow perc \xrightarrow{d} act \downarrow info_2$

after delay d (mental processing)

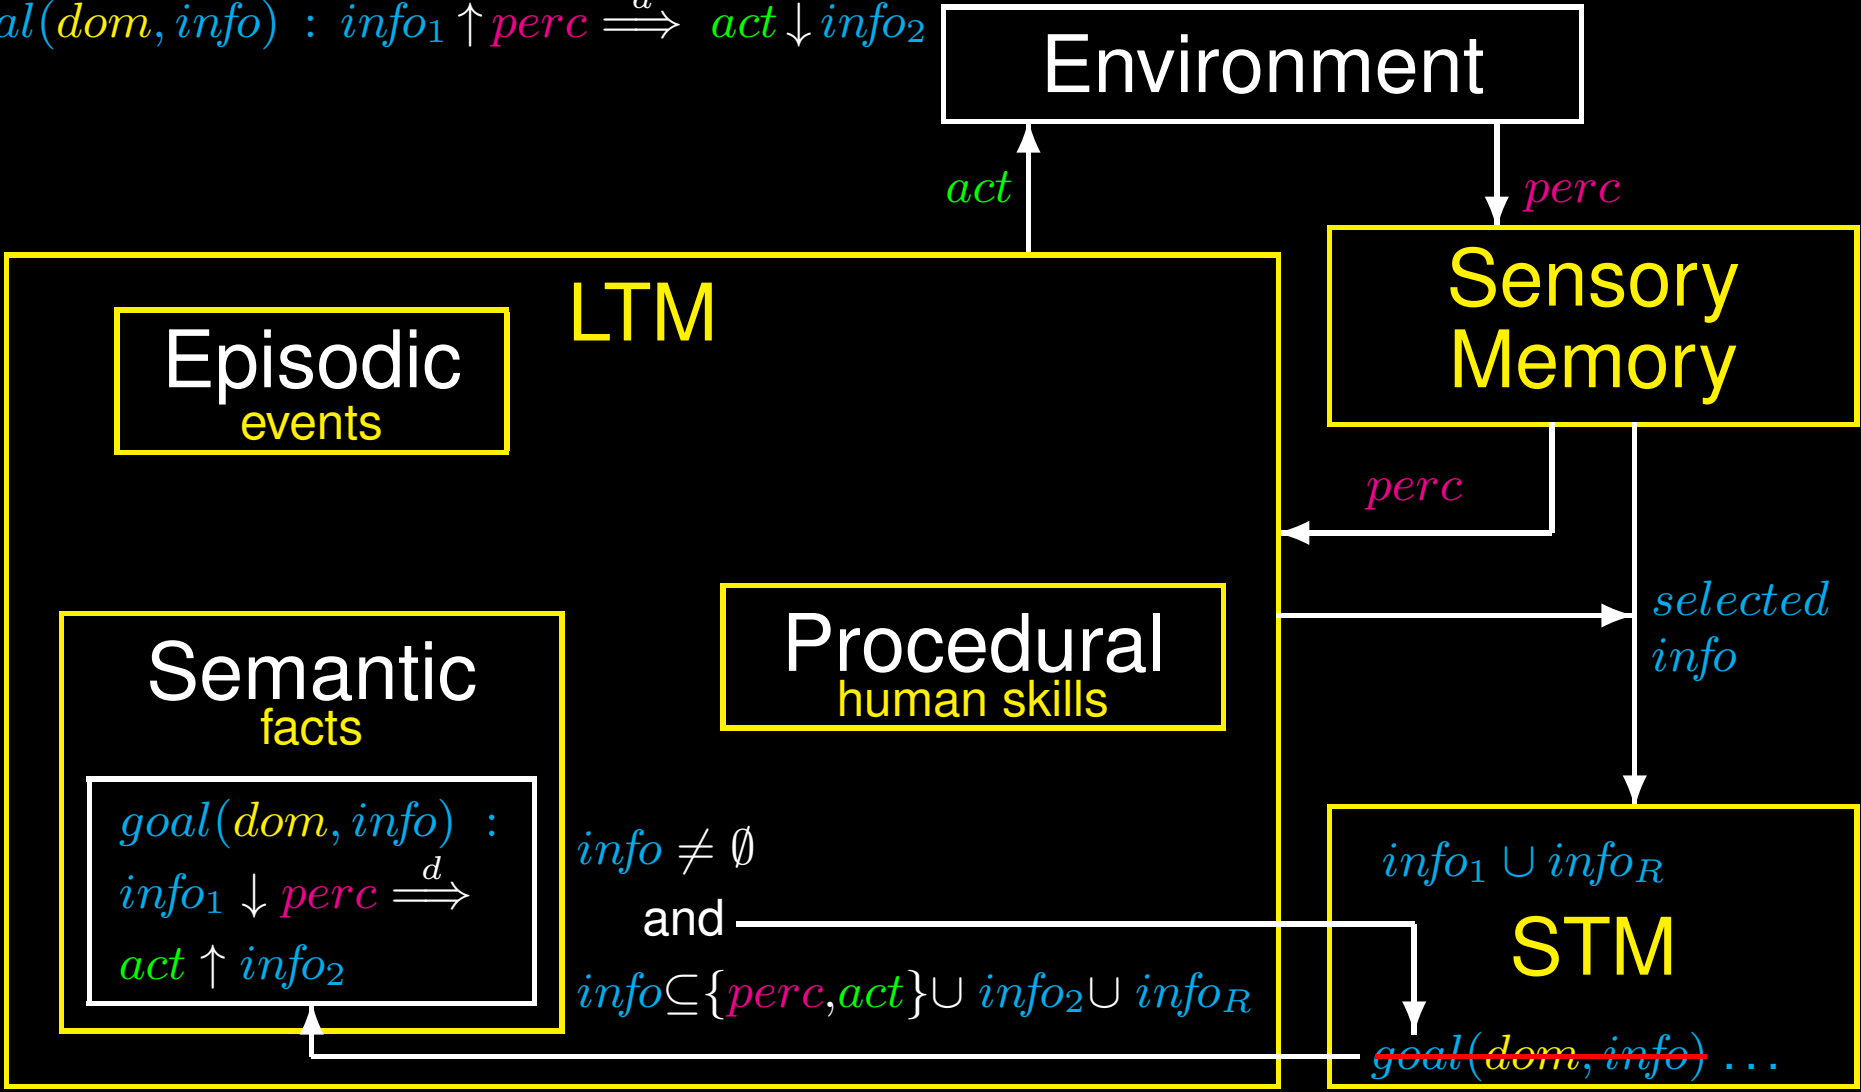

Goal Achievement

$$goal(dom, info) : info_1 \uparrow perc \xrightarrow{d} act \downarrow info_2$$

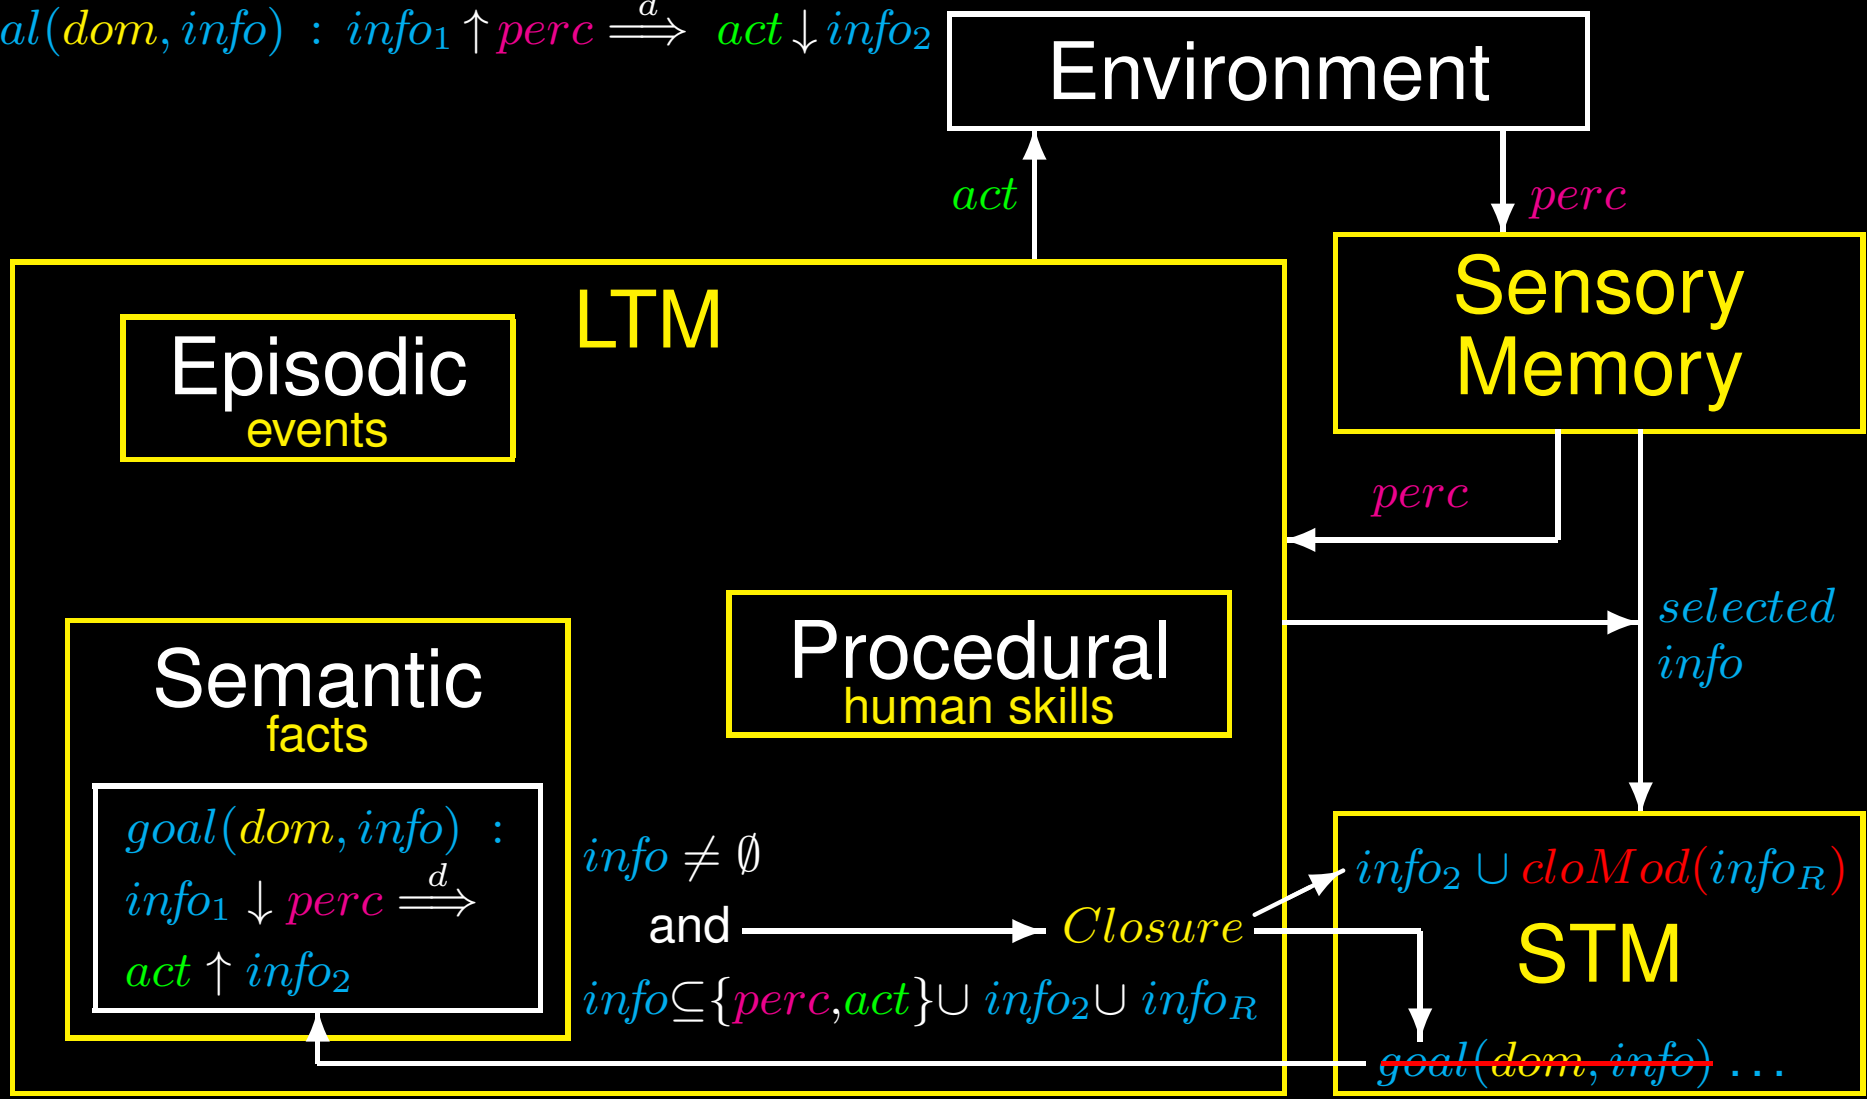

Goal Achievement

$$goal(dom, info) : info_1 \uparrow perc \xrightarrow{d} act \downarrow info_2$$

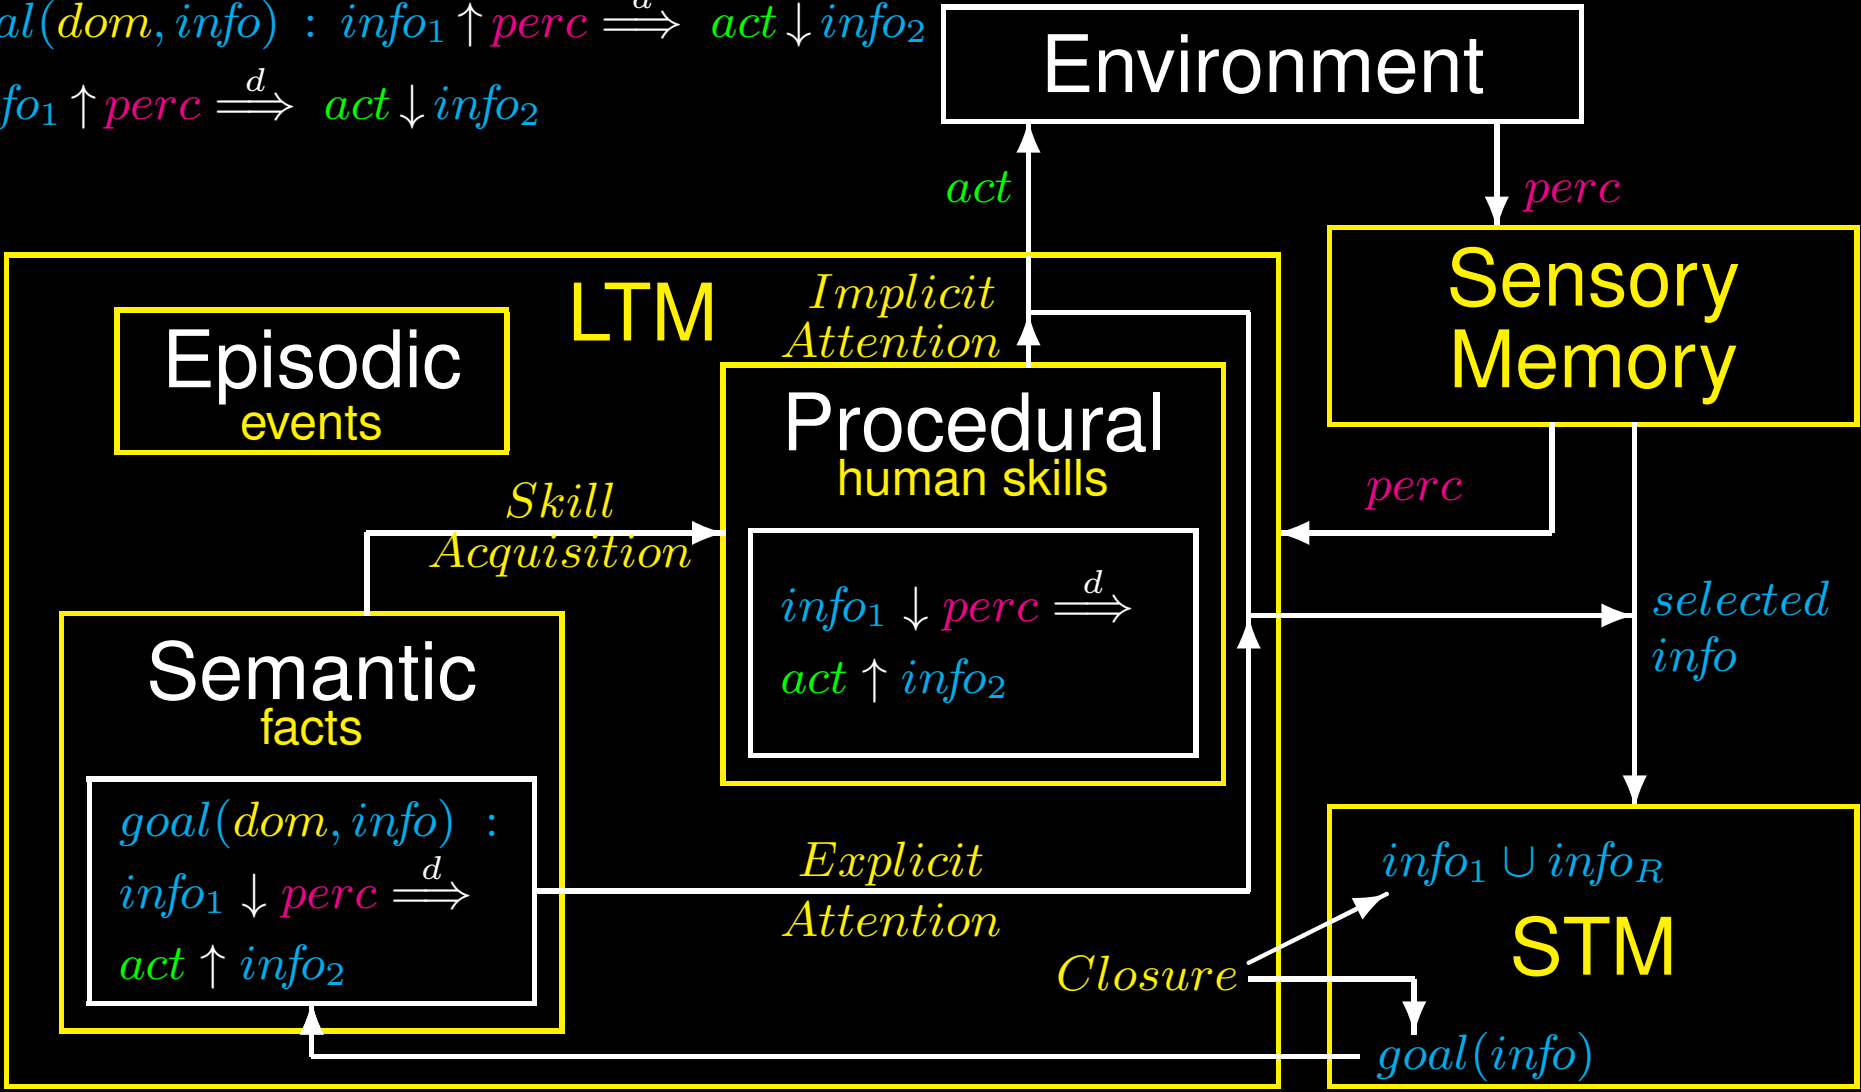

Closure

$$goal(dom, info) : info_1 \uparrow perc \xrightarrow{d} act \downarrow info_2$$

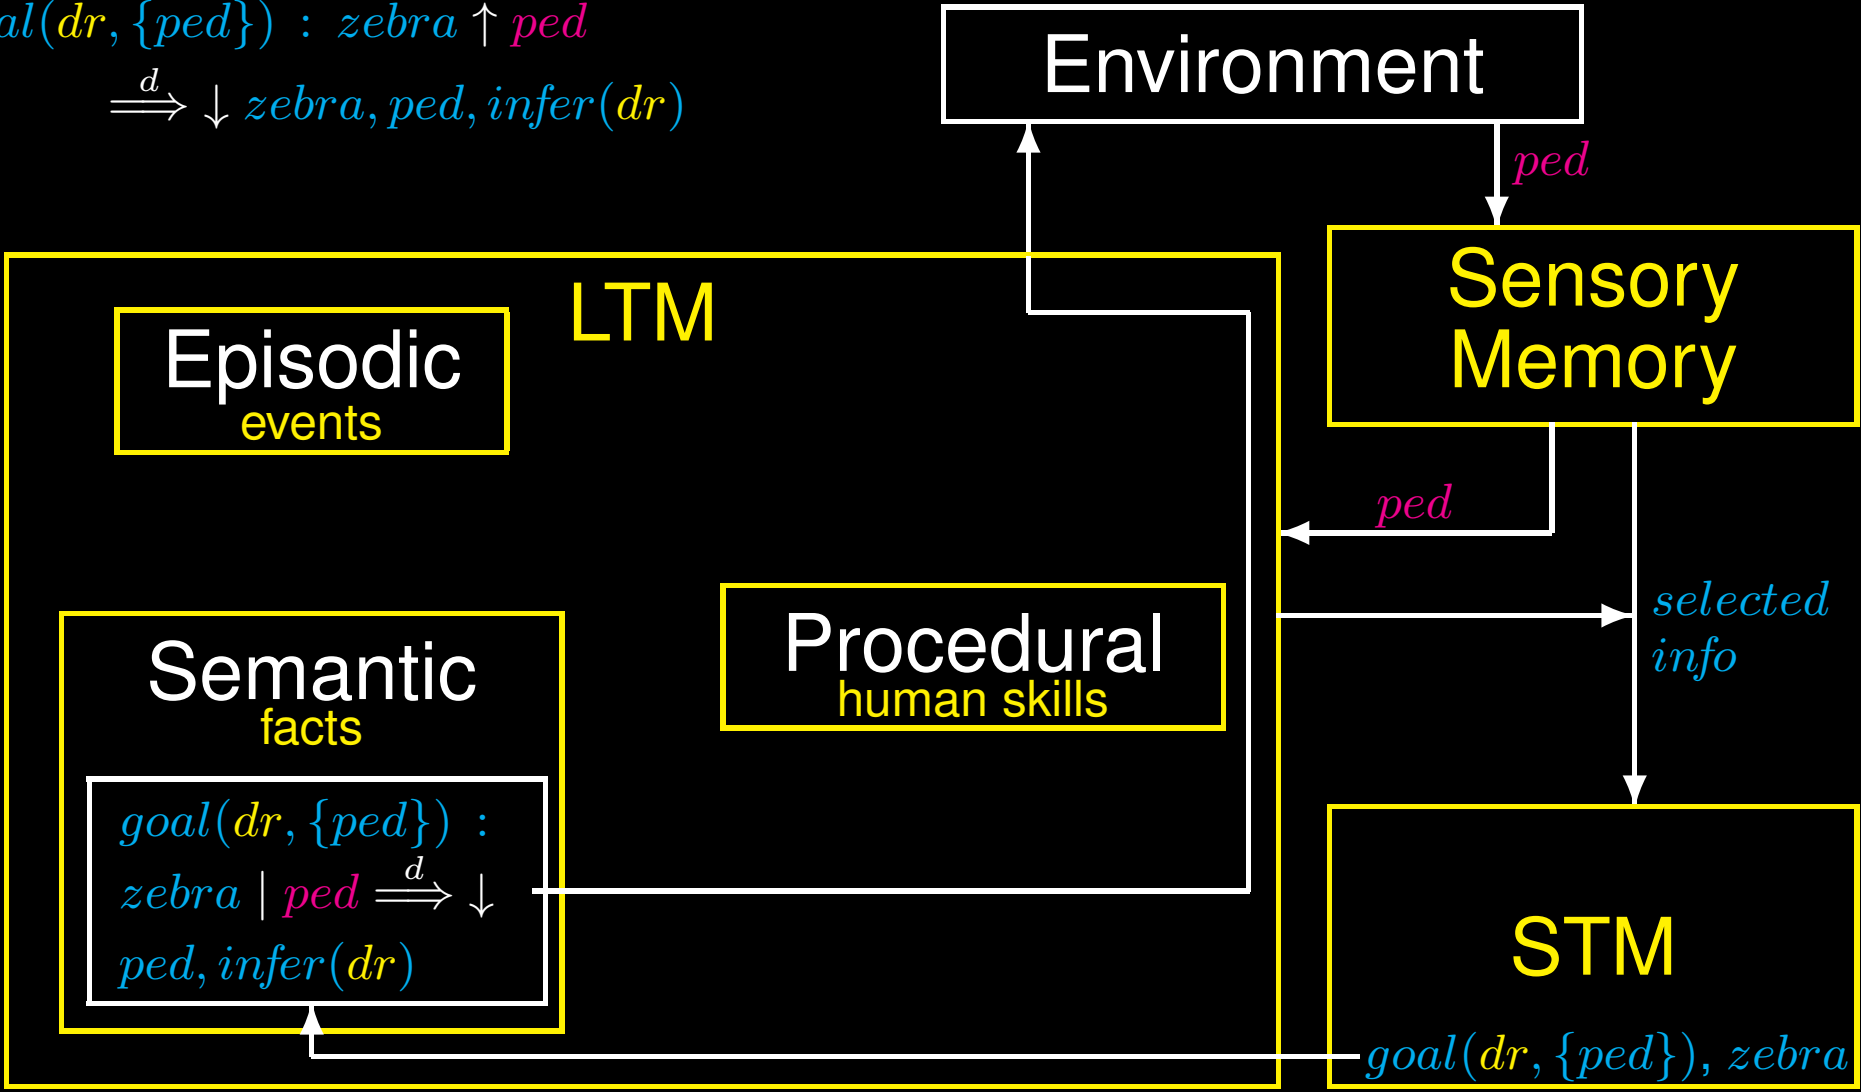

⇒ Automatic Control

$goal(dom, info) : info_1 \uparrow perc \xRightarrow{d} act \downarrow info_2$
 $info_1 \uparrow perc \xRightarrow{d} act \downarrow info_2$

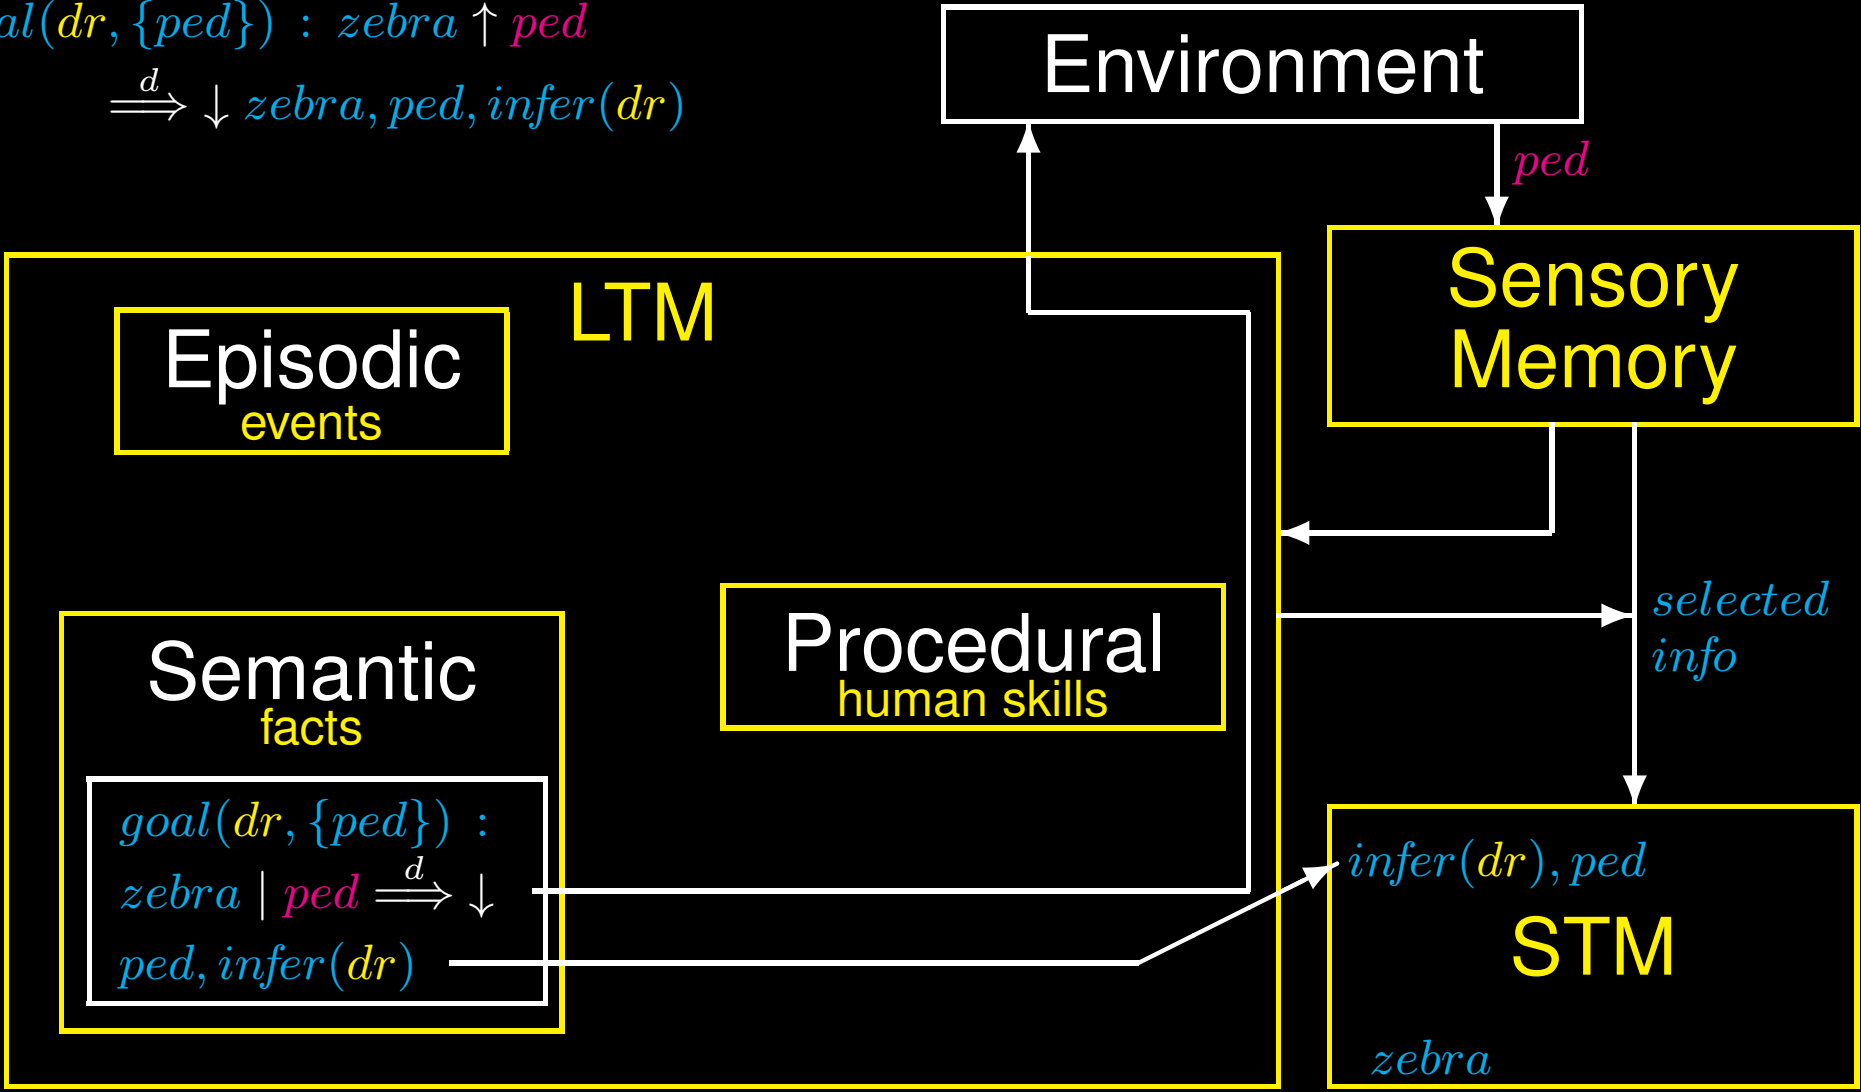

Deliberate Behaviour Example

$goal(dr, \{ped\}) : zebra \uparrow ped$
 $\xrightarrow{d} \downarrow zebra, ped, infer(dr)$

Deliberate Behaviour Example

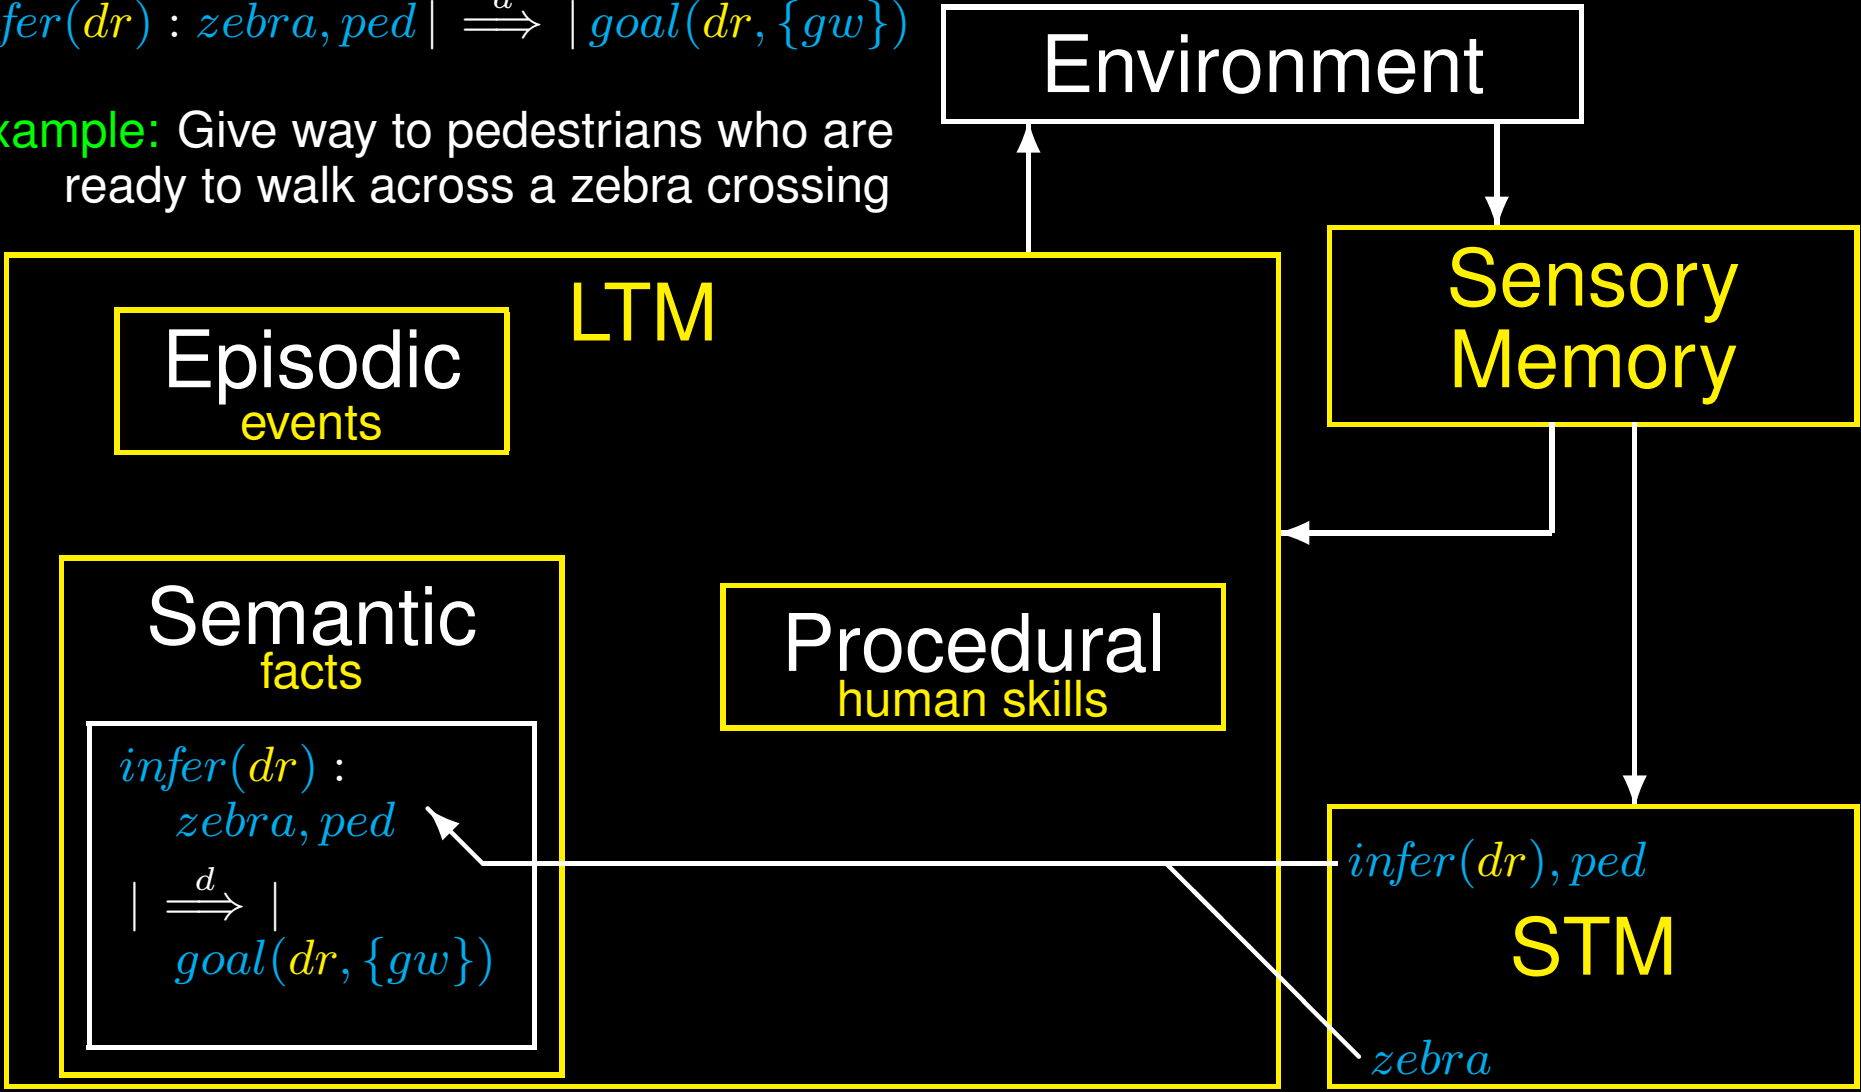

$goal(dr, \{ped\}) : zebra \uparrow ped$
 $\xrightarrow{d} \downarrow zebra, ped, infer(dr)$

Behaviour+Reasoning

$infer(dr) : zebra, ped \mid \xRightarrow{d} \mid goal(dr, \{gw\})$

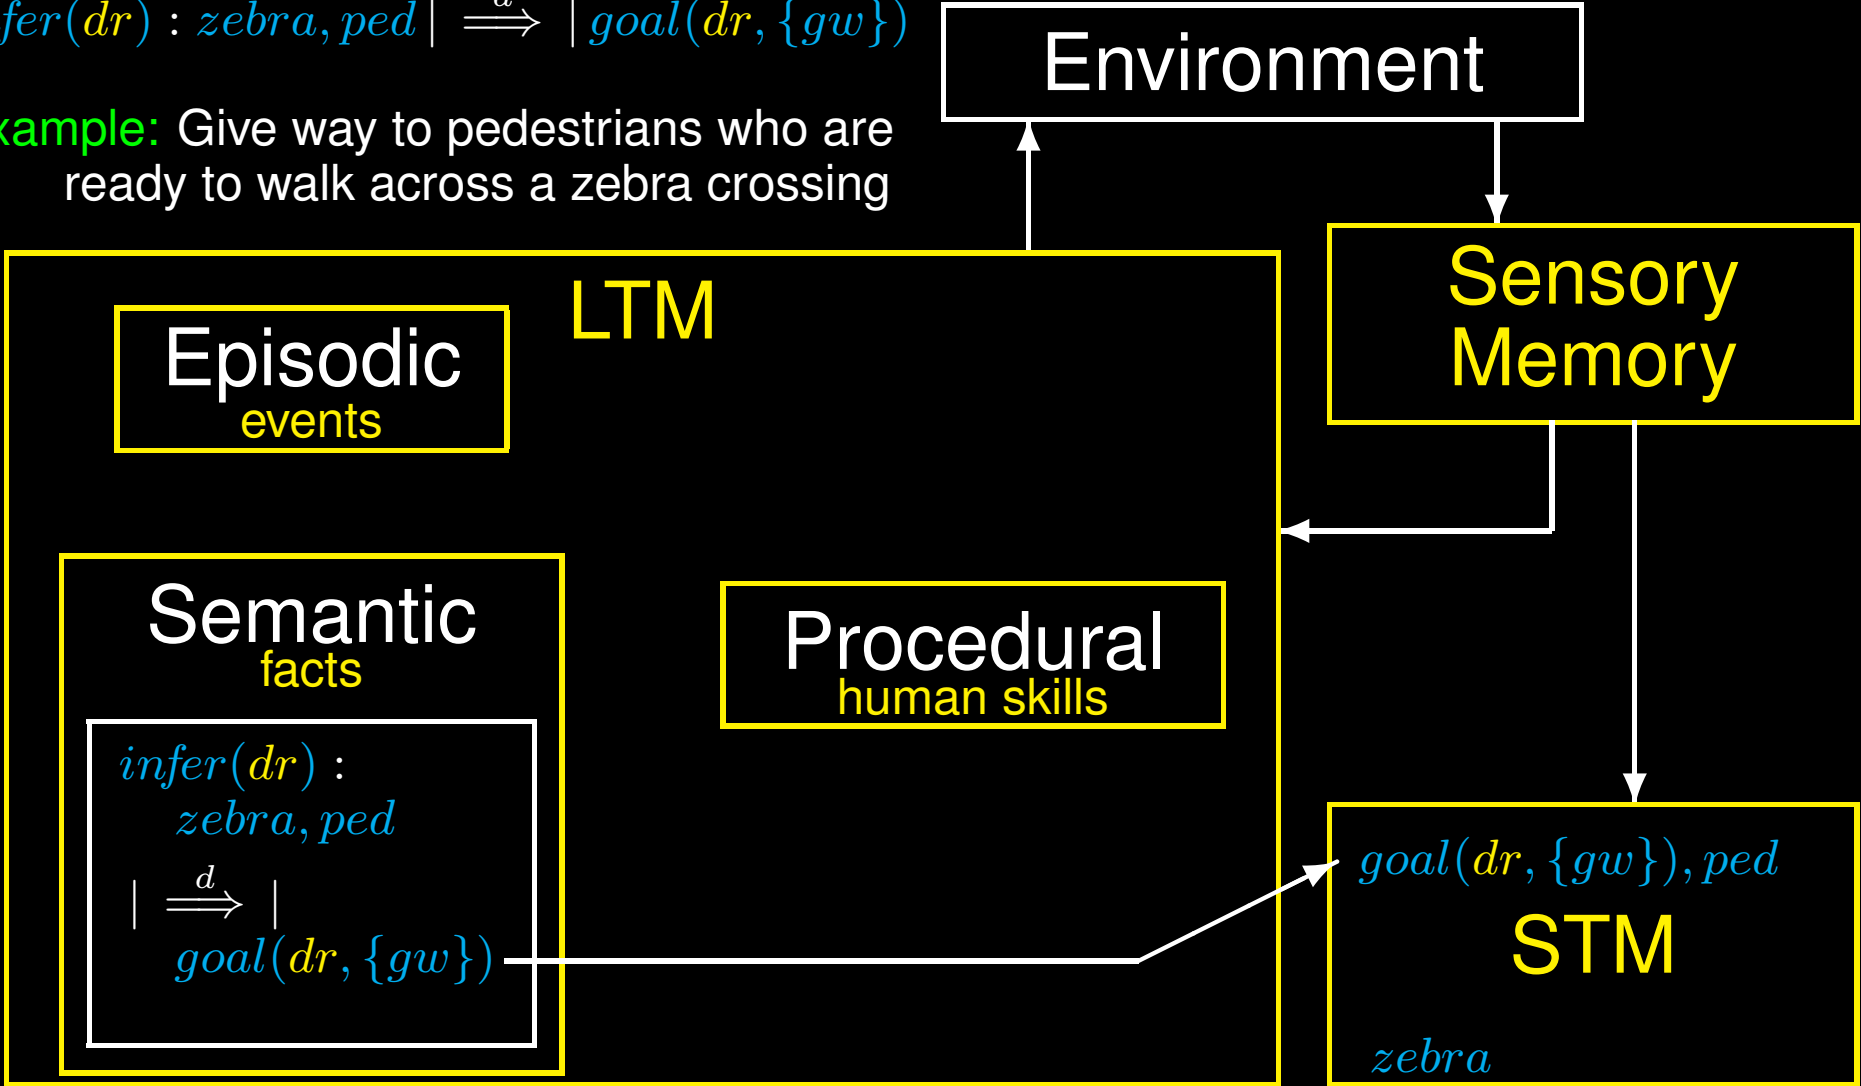

Example: Give way to pedestrians who are ready to walk across a zebra crossing

Behaviour+Reasoning

$infer(dr) : zebra, ped \mid \xRightarrow{d} \mid goal(dr, \{gw\})$

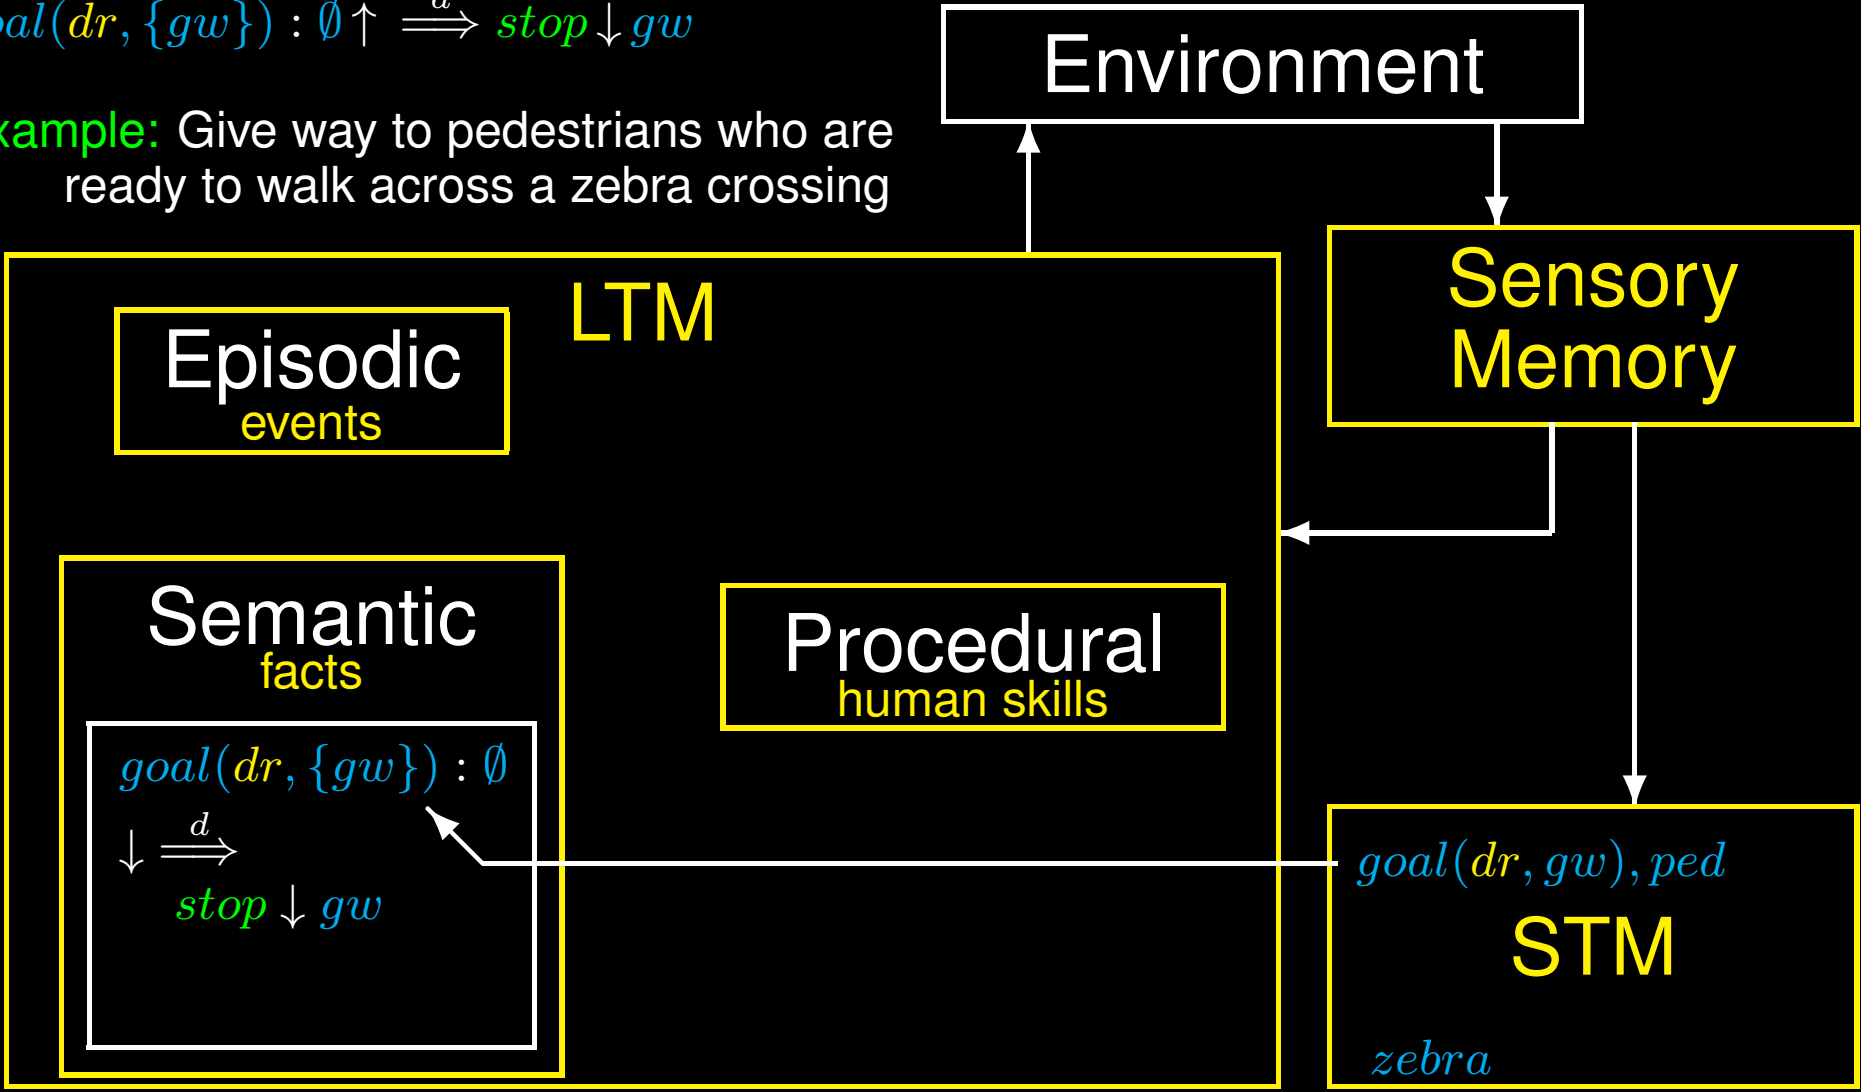

Example: Give way to pedestrians who are ready to walk across a zebra crossing

Behaviour+Reasoning: Action

$goal(dr, \{gw\}) : \emptyset \uparrow \xrightarrow{d} stop \downarrow gw$

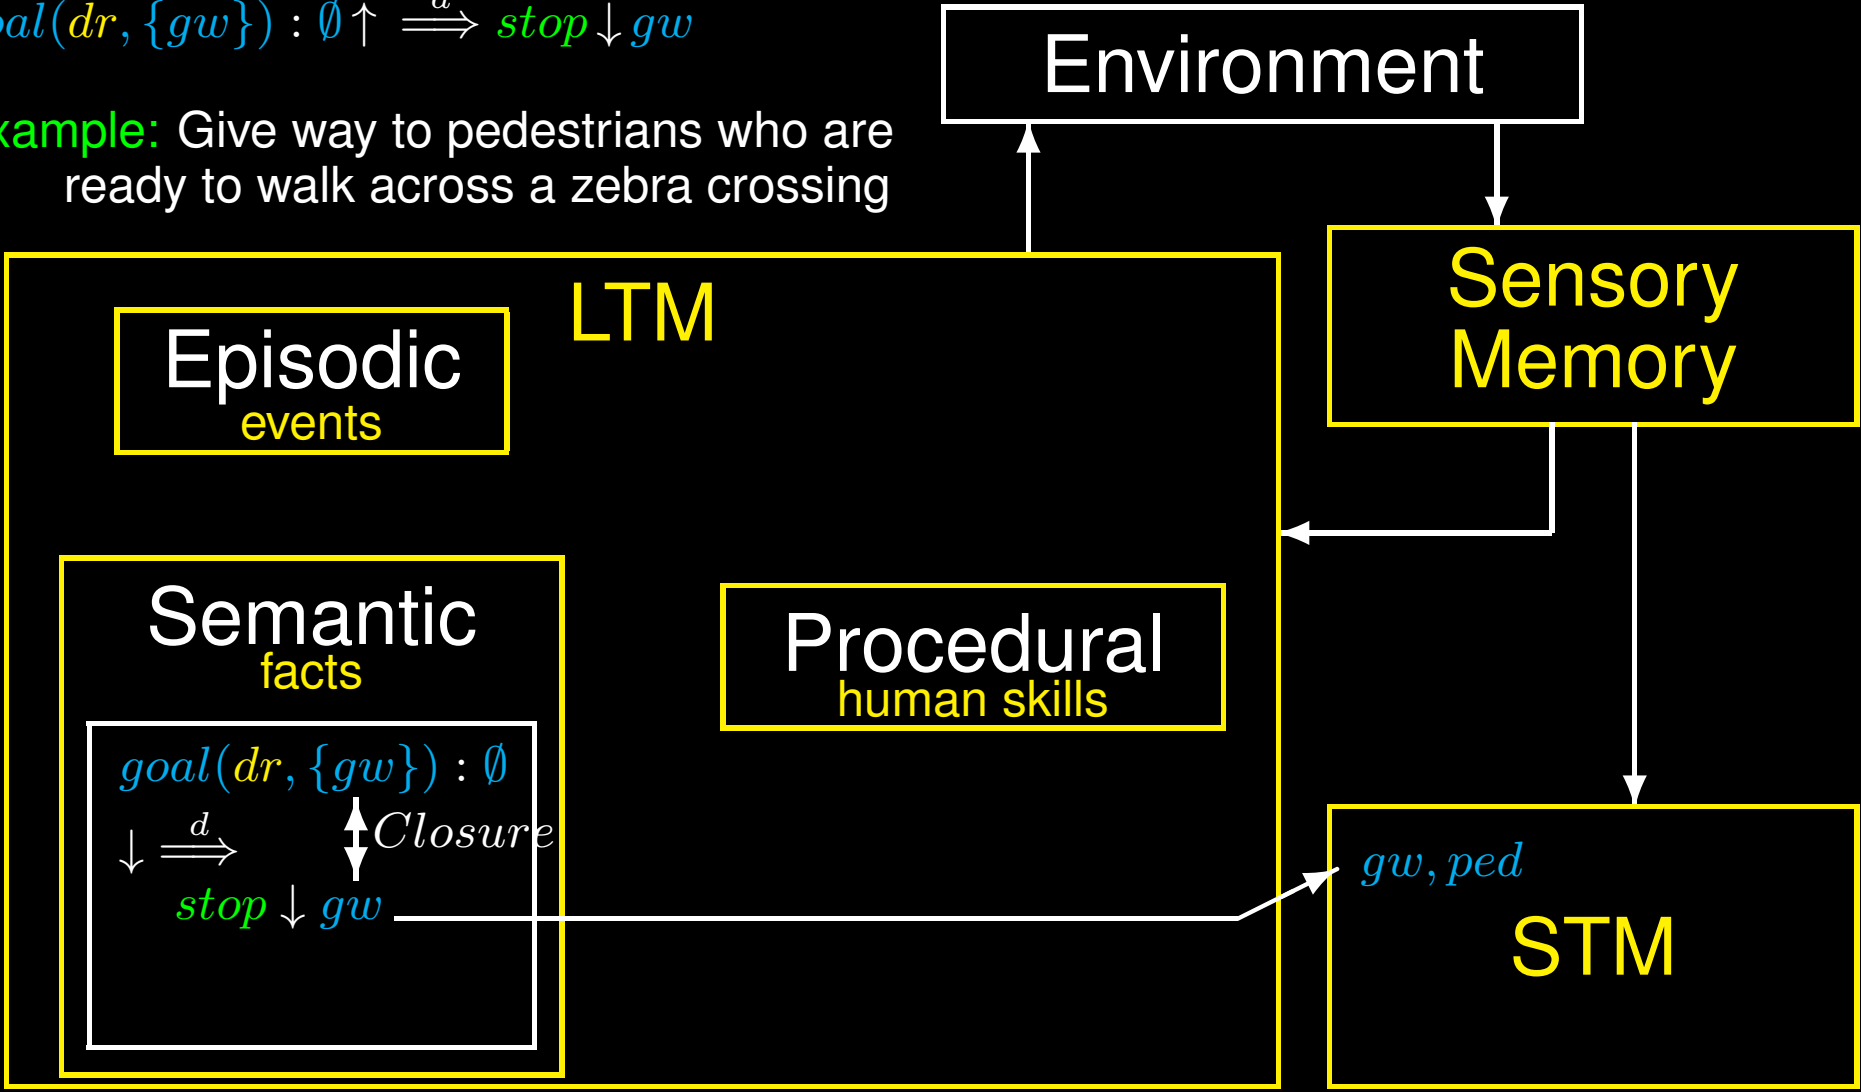

Example: Give way to pedestrians who are ready to walk across a zebra crossing

Behaviour+Reasoning: Action

$$goal(dr, \{gw\}) : \emptyset \uparrow \xrightarrow{d} stop \downarrow gw$$

Example: Give way to pedestrians who are ready to walk across a zebra crossing

Conclusion

Behaviour and Reasoning Description Language

- knowledge representation
- knowledge retrieval
- reasoning
- human behaviour
- problem solving

Conclusion

Behaviour and Reasoning Description Language

- knowledge representation
- knowledge retrieval
- reasoning
- human behaviour
- problem solving

Further and Future Work

Further Completed Work

- **Implementation of reasoning**

Antonio Cerone and Peter Csaba Ölveczky

**Modelling Human Reasoning in Practical
Behavioural Contexts using Real-time Maude**

to be presented at FMIS 2019,
7 October 2019, Porto, Portugal

Further and Future Work

Further Completed Work

- Implementation of reasoning

Antonio Cerone and Peter Csaba Ölveczky

Modelling Human Reasoning in Practical Behavioural Contexts using Real-time Maude

to be presented at FMIS 2019,
7 October 2019, Porto, Portugal

Future Work

- Implementation of problem solving

Further and Future Work

Further Completed Work

- Implementation of reasoning

Antonio Cerone and Peter Csaba Ölveczky

Modelling Human Reasoning in Practical Behavioural Contexts using Real-time Maude

to be presented at FMIS 2019,
7 October 2019, Porto, Portugal

Future Work

- Implementation of problem solving
- Use the language to
 - compare alternative theories of cognition
 - formally verify interactive systems
